(54) INFORMATION TRANSMISSION DEVICE

(57) Abstract

Purpose: The present invention pertains to a type of information transmission device. The purpose of the present invention is to provide a type of information transmission device characterized by combining a digital camera and a cell phone, it can provide an information transmission device that can be carried around conveniently without the need to carry multiple memory cards.

Constitution: It is composed of the following parts: digital still video camera portion (10), cell phone portion (20) with wireless call function, bus (1) that connects said digital still video camera portion (10) and said cell phone portion (20), and control part (2) connected to bus (1) that performs control of operation of said digital still video camera portion (10) and cell phone portion (20); as digital still video camera portion (10) and cell phone portion (20) are combined via bus (1), the image information obtained by digital still video camera portion (10) can be sent wirelessly to a remote site from cell phone portion (20) as needed.

[There are no amendments to this patent.]

CLAIMS

1. A type of information transmission device characterized by the following facts: the information transmission device is composed of the following parts:
 - digital still video camera portion (10) that digitally reads the image information,
 - cell phone portion (20) with a wireless call function,
 - bus (1) that commonly connects said digital still video camera portion (10) and cell phone portion (20),
 - and control part (2) that is connected to bus (1), and performs an operation control for said digital still video camera portion (10) and cell phone portion (20),
 - and because digital still video camera portion (10) and cell phone portion (20) are combined via bus (1), the image information obtained by digital still video camera portion (10) can be wirelessly transmitted from cell phone portion (20) to a remote site, as needed.
2. The information transmission device described in Claim 1, characterized by the following facts: said digital still video camera portion (10) has
 - a photographing means that converts an optical image to electric image information,
 - a storage means that stores said image information in a memory card,
 - a judgment means that judges if there is a free storage area in the memory card,
 - and a transmission means that transmits the image information in the memory card to cell phone portion (20) when said judgment means determines that there is no free storage area;
 - and said cell phone portion (20) has
 - a temporary storage means that temporarily stores the information transmitted from digital still video camera portion (10),
 - a storage means that stores the information of the information transmission destination,
 - a position detecting means that detects the present position from the communication information of the cell phone,
 - a selecting means that selects the transmission destination from a list of transmission destinations stored in said storage means using the information from said position detecting means,
 - and a transmission means that transmits the image information stored in said temporary storage means on the basis of the information from said selecting means.
3. The information transmission device described in Claim 1, characterized by the following facts: said digital still video camera portion (10) has

a photographing means that converts an optical image to electric image information,
 a storage means that stores said image information in a memory card,
 a judgment means that judges if there is a free storage area in the memory card,
 and a transmission means that transmits the image information in the memory card to cell
 phone portion (20) when said judgment means determines that there is no free storage area;
 and said cell phone portion (20) has
 a storage means that stores the information of the information transmission destination,
 a position detecting means that detects the present position from the communication
 information of the cell phone,
 a selecting means that selects the transmission destination from a list of transmission
 destinations stored in said storage means using the information from said position detecting
 means,
 and a transmission means that transmits the image information transmitted from said
 memory card on the basis of the information from said selecting means.

4. The information transmission device described in Claim 1, characterized by the fact
 that said cell phone portion (20) has
 a microphone for voice communication,
 a speaker that generates a warning sound when it is used as a camera and acts as a voice
 receiving part when it is used as a telephone,
 a release that disconnects the shutter,
 and a battery for powering the circuit.

5. The information transmission device described in Claim 1, characterized by the
 following facts:
 it is in a rectangular solid shape like that of a lunch box;
 on one side of the surface, a photographing lens is set at the center, and a strobe light and
 a finder are set on the end portion;
 on the other surface, a speaker, a group of keys and a microphone are set;
 on the side surface, a release is set;
 the speaker and the microphone are located on the two ends of the box;
 and the battery and the release are located on the microphone side.

6. The information transmission device described in Claim 1, characterized by the
 following facts:
 it is in a rectangular solid shape like that of a lunch box;

on one side of the surface, a speaker, a group of keys, a release and a microphone are set;
 on the side surface, a photographing lens and a finder are set;
 the speaker and the microphone are placed on the two ends of the box;
 and the battery and the release are placed on the microphone side.

7. The information transmission device described in Claim 1, characterized by the following facts:

it is in a rectangular solid shape like that of a lunch box;
 on one side of the surface, a microphone, a group of keys and a speaker are set;
 on the other surface, a release is set;
 on the side surface, a photographing lens and a finder are set;
 the speaker and the microphone are located on the two ends of the box;
 and the battery and the release are located on the microphone side.

8. The information transmission device described in Claim 1, characterized by the following facts:

it is in a rectangular solid shape like that of a lunch box;
 on one side of the surface, a microphone, a group of keys and a speaker are set;
 on the side surface, a release is set;
 the portion where said key group is accommodated is formed in a plate shape that can be

opened/closed freely;

when not in use, the picture taking lens and finder are hidden by the plate;
 and, when in use, the plate is raised to expose the picture taking lens and the finder.

9. The information transmission device described in Claim 1, characterized by the following facts:

it is in a rectangular solid shape like that of a lunch box;
 on one side of the surface, a speaker, a finder, a group of keys and a microphone are set;
 on the other surface, a photographing lens is set at the center;
 on the side surface, a release is set;
 the aforementioned speaker and microphone are set on the two ends of the box;
 and the battery is placed on the lower portion of the device.

10. The information transmission device described in Claim 1, characterized by the following facts:

it is in a rectangular solid shape like that of a lunch box;

Explore Litigation Insights

Docket Alarm provides insights to develop a more informed litigation strategy and the peace of mind of knowing you're on top of things.

Real-Time Litigation Alerts

Keep your litigation team up-to-date with **real-time alerts** and advanced team management tools built for the enterprise, all while greatly reducing PACER spend.

Our comprehensive service means we can handle Federal, State, and Administrative courts across the country.

Advanced Docket Research

With over 230 million records, Docket Alarm's cloud-native docket research platform finds what other services can't. Coverage includes Federal, State, plus PTAB, TTAB, ITC and NLRB decisions, all in one place.

Identify arguments that have been successful in the past with full text, pinpoint searching. Link to case law cited within any court document via Fastcase.

Analytics At Your Fingertips

Learn what happened the last time a particular judge, opposing counsel or company faced cases similar to yours.

Advanced out-of-the-box PTAB and TTAB analytics are always at your fingertips.

API

Docket Alarm offers a powerful API (application programming interface) to developers that want to integrate case filings into their apps.

LAW FIRMS

Build custom dashboards for your attorneys and clients with live data direct from the court.

Automate many repetitive legal tasks like conflict checks, document management, and marketing.

FINANCIAL INSTITUTIONS

Litigation and bankruptcy checks for companies and debtors.

E-DISCOVERY AND LEGAL VENDORS

Sync your system to PACER to automate legal marketing.
