- 1 24. A class-based system including at least one computer
- 2 that processes digital information, said system including at least one
- 3 element that uses at least some rights management information.
- 1 25. A method of operating a class-based system including at
- 2 least one computer that processes digital information, said method
- 3 including the step of using at least some rights management
- 4 information.
- 1 26. A system for assigning at least one thing or person to at
- 2 least one class including at least one computer that processes digital
- 3 information, said system including at least one element that uses at
- 4 least some rights management data in making said assignment.
- 1 27. A system for making and/or using at least one class-
- 2 based assignment including at least one computer that processes
- 3 digital information, said system including at least one element that
- 4 uses at least some rights management information.
- 1 28. A system for clearing at least one transaction including at
- 2 least one computer that processes digital information, said system
- 3 including at least one element that uses at least one class defined,
- 4 assigned, selected, and/or matched based at least in part on rights
- 5 management information.
- 1 29. A method for authorizing at least one computer and/or
- 2 computer user including the step of using at least one class defined,

- 3 assigned, selected, and/or matched based at least in part on rights
- 4 management information.
- 1 30. A method for authorizing at least one electronic
- 2 transaction including the step of using at least one class defined,
- 3 assigned, selected, and/or matched based at least in part on rights
- 4 management information.
- 1 31. A method for initiating and/or performing at least one at
- 2 least in part secure electronic transaction including the step of using
- 3 class related information defined, assigned, selected, and/or matched
- 4 based at least in part on rights management information.
- 1 32. An information processing method including the steps
- 2 of:
- 3 securely charging a fee; and
- 4 conditioning said charging step at least in part on at least one
- 5 class defined, assigned, selected, and/or matched based at least in part
- 6 on rights management information.
- 1 33. A method for securely exchanging digital information
- 2 including the step of at least in part defining, assigning, selecting,
- 3 and/or matching at least one class based at least in part on rights
- 4 management information.
- 1 34. A method for performing at least one rights operating
- 2 system based transaction including the step of defining, assigning,

- 3 selecting, and/or matching at least one class based at least in part on
- 4 rights management information.
- 1 35. A method for performing at least one protected
- 2 processing environment operation including the step of defining,
- 3 assigning, selecting, and/or matching at least one class based at least
- 4 in part on rights management information.
- 1 36. A method of pushing information including the steps of
- 2 classifying recipients and/or information to be sent to said recipients
- 3 based at least in part on rights management information, and selecting
- 4 said information to distribute to said recipients based at least in part
- 5 on said classifying.
- 1 37. A method of pushing information including the steps of
- 2 classifying recipients and/or information to be sent to said recipients
- 3 based at least in part on rights management information, and
- 4 matching at least a portion of said information with at least one class
- 5 of said recipients based at least in part on said classifying.
- 1 38. A method of pushing information as in claim 37 further
- 2 including the step of creating a classification scheme and/or hierarchy
- 3 using at least some rights information.
- 1 39. A method of pushing information as in claim 37 further
- 2 including the step of assigning at least some information and/or at
- 3 least one recipient to a class or category, said assignment based at
- 4 least in part on rights management information.

1	40. A subject switch for matching subscribers and/or
2	recipients desiring information in one or more classes with one or
3	more sources of information, wherein the subject switch matches at
4	least one subscriber and/or participant with at least one information
5	source on a mapping based at least in part on rights management
6	information.
1	41. A subject switch as in claim 40 wherein said information
2	source:
3	selects at least some information, said selection based on at
4	least one class, and wherein said assignment of said at least some
5	information to said at least one class is based at least in part on rights
6	management information; and
7	sends at least some said selected information to said subscribe
8	in accordance with said subscriber's subscribing to said class of
9	information.
1	42. A subject switch as in claim 40 wherein at least one of
2	said subject switch, said subscriber and/or participant and said
3	information source includes at least one computer providing a
4	protected processing environment.
1	43. A subject switch as in claim 40 wherein at least one
2	subscriber and/or participant uses rights management information at
3	least in part to persistently subscribe to at least some information
4	provided by at least one information source.

1 44. A subject switch as in claim 40 wherein the sub	ject
---	------

- switch includes means for using at least one class definition for said 2
- 3 mapping.
- 45. A subject switch as in claim 40 wherein the subject 1
- switch includes means for responding to a subscriber and/or 2
- participant request by providing information indicating information 3
- sources in at least one specified or desired class. 4
- 46. A subject switch as in claim 40 further including a 1
- messaging service for use by at least two of said subject switch, said 2
- subscriber and/or participant and said information source and/or 3
- participant to communicate electronically. 4
- 1 47. A subject switch as in claim 46 wherein said electronic
- 2 communications uses at least one secure container.
- A subject switch as in claim 40 wherein at least one of 1 48.
- said subject switch, subscriber, or information source uses at least one 2
- control set associated with at least some information received by at 3
- 4 least one subscriber.
- A digital narrowcasting arrangement comprising: 1 49.
- 2 a computer; and
- 3 at least one classifying element used to select content to
- narrowcast to recipients based at least in part on rights management 4
- 5 information.

1 50. A digital	l narrowcasting arrangement a	s in	ı claim	49
-----------------	-------------------------------	------	---------	----

- wherein the classifying element classifies at least one of (a) a 2
- recipient, and (b) content, based at least in part on rights management 3
- 4 information.
- A digital narrowcasting arrangement as in claim 49 1 51.
- wherein said classifying element defines at least one class using at 2
- least some rights management information. 3
- A digital narrowcasting arrangement as in claim 49 52. 1
- wherein the classifying element assigns at least some content to at 2
- least one class, said assignment based on at least some rights 3
- management information. 4
- A digital narrowcasting arrangement as in claim 49 53. 1
- wherein the classifying element defines at least one class based at 2
- least in part on content selections previously made by the recipients 3
- and/or profiles generated based at least in part on recipient input. 4
- A digital narrowcasting arrangement as in claim 49 1 54.
- wherein the classifying element sends a content request including 2
- classification data and destination information to at least one 3
- 4 provider.
- An information distribution system including: a 1 55.
- computer network; and a selection arrangement that selects 2
- information for use by individual recipients using classes based at 3
- least in part on rights management information. 4

- 1 56. An information distribution system as in claim 55
- 2 wherein the system further includes a classifying element that
- determines at least one class of content and/or service of interest to at
- 4 least one recipient.
- 1 57. An information distribution system as in claim 56
- 2 wherein said classifying element defines at least one class using at
- 3 least some rights management information.
- 1 58. An information distribution system as in claim 56
- 2 wherein said classifying element assigns at least some content to at
- 3 least one class, said assignment based on at least some rights
- 4 management information.
- 1 59. An information distribution system as in claim 55
- 2 wherein the system includes means for allowing the user to choose to
- 3 receive the selected information.
- 1 60. An enterprise information system including a computer
- 2 system for classifying employees, said system including at least one
- 3 rights management component that distributes information to the
- 4 employees based at least in part on employee classification.
- 1 61. An enterprise information system as in claim 60 wherein
- 2 the computer matches the information to employees based at least in
- 3 part on the employee classification.
- 1 62. An enterprise information system as in claim 60 wherein
- 2 the employee classification is used to gather information for

- employees without revealing substantial information concerning 3
- 4 individual employees.
- A method for conducting a chain of handling and/or 1 63.
- control including the steps of allowing plural parties to contribute 2
- rules and/or consequences, and performing at least one classification 3
- based at least in part on said rules and/or consequences. 4
- A method as in claim 63 wherein at least some of said 64. 1
- contributed rules and/or consequences are class based. 2
- A method as in claim 63 wherein at least one of said 1 65.
- parties modifies at least one of said rules and/or consequences based 2
- 3 at least in part on class.
- A method as in claim 63 including the step of generating 1 66.
- class assignments based at least in part on said rules and/or 2
- consequences, and sending said class assignments to at least one 3
- clearinghouse. 4
- A method as in claim 63 including the step of classifying 1 67.
- said rules and/or consequences to provide at least one class, and 2
- fulfilling at least one request by selecting based on said class. 3
- A directory services system for classifying confidential 1 68.
- 2 information, the system including:
- a communications component that receives directory requests; 3
- and 4
- a response component that uses said classification to respond to 5

- 6 directory requests while preserving confidentiality of said
- 7 confidential information.
- 1 69. A directory services system as in claim 68 wherein said
- 2 response component uses at least one classification process to classify
- 3 items in a directory, and uses results of the classification process, at
- 4 least in part, to respond to directory requests.
- 1 70. A directory services system as in claim 68 wherein said
- 2 response component sends information to destinations revealed by the
- 3 results of the classification process without revealing at least some
- 4 information concerning said destinations to the information source.
- 1 71. A microsegmented merchandising technique including
- 2 the steps of performing classification based at least in part on usage
- 3 data and/or lifestyle profiles, and distributing offers for products
- 4 and/or services based at least in part on the classification.
- 1 72. A microsegmented merchandising technique as in claim
- 2 71 wherein the performing step includes defining at least one class
- 3 hierarchy based at least in part on rights management information.
- 1 73. A microsegmented merchandising technique as in claim
- 2 71 further including the step of combining plural offers for different
- 3 products and/or services based at least in part on said classification.
- 1 74. A trading network including:
- 2 a communications element for communicating digital signals;
- 3 and

4	means for matching value chain participants through a					
5	classification based at least in part on rights management					
6	information.					
1	75. A trading network as in claim 74 further including means					
2	for defining at least one class hierarchy based at least in part on rights					
3	management information.					
1	76. A trading network as in claim 74 further including means					
2	for determining class membership based at least in part on action					
3	and/or information provided by at least one value chain participant.					
1	77. A trading network as in claim 74 wherein said matching					
2	means includes means for at least in part performing at least one					
3	electronic negotiation.					
1	78. A securities trading method including the step of					
2	performing a classification process at least in part using at least one					
3	rights management element, and using the classification process to					
4	select securities for trade.					
1	79. A securities trading method as in claim 78 wherein said					
2	classification process includes defining at least one class hierarchy					
3	based at least in part on rights management information.					
1	80. A currency/debt trading system including:					
2	a currency or debt trading computer; and					

an arrangement coupled to said computer that performs at least

- 4 one classification process based at least in part on rights management
- 5 information.
- 1 81. A currency/debt trading system as in claim 80 wherein
- 2 said arrangement includes means for defining at least one class
- 3 hierarchy based at least in part on rights management information.
- 1 82. A currency/debt trading system as in claim 80 wherein
- 2 the arrangement uses classification to maximize return or minimize
- 3 loss.
- 1 83. A financial institution selection system including a
- 2 computer that classifies financial institutions based at least in part on
- 3 rights management information.
- 1 84. A software distribution method including the steps of
- 2 generating class information based at least in part on rights
- 3 management information, and selecting software to be distributed
- 4 and/or recipients who are to receive distributed software based at least
- 5 in part on class information.
- 1 85. A software distribution method as in claim 84 wherein
- 2 said generating step includes defining a class hierarchy using at least
- 3 some rights management information.
- 1 86. A software distribution method as in claim 84 wherein
- 2 the selecting step includes selecting software to be distributed by
- 3 classifying the software based at least in part on rights management
- 4 information associated with the software.

- 1 87. A software distribution mehtod as in claim 80 wherein
- 2 the selecting step includes selecting recipients to receive software
- 3 based at least in part on usage information provided by a rights
- 4 management process.
- 1 88. A classification technique including the step of
- 2 authenticating class membership based at least in part on digital
- 3 credentials and/or certificates.
- 1 89. A classification technique as in claim 88 wherein said
- 2 digital credentials are digital certificates.
- 1 90. A classification technique as in claim 88 wherein said
- 2 digital credentials are digital membership cards.
- 1 91. A classification technique as in claim 88 further
- 2 including the step of deciding class membership based at least in part
- 3 on rights management information.
- 1 92. A classification technique as in claim 88 further
- 2 including the step of classifying at least one of users, nodes, devices,
- 3 networks, servers, clients and services based at least in part on rights
- 4 management information.
- 1 93. A classification technique as in claim 88 further
- 2 including the step of conditioning at least one rights management
- 3 process at least in part on authenticated class membership.

1	94	A computer system	including:
1	JT.	11 computer system	moraume,

- a first arrangement that generates class-based controls to 2
- participants based at least in part on class and/or class-based 3
- 4 assignments; and
- 5 a second arrangement that allows participants to interact with
- 6 information and/or one another at least in part using said class-based
- controls. 7
- 95. A computer system as in claim 94 further including 1
- means for using said class-based controls to limit participants' access 2
- to information and/or services based on participants' classes. 3
- A health care computer system including an arrangement 1 96.
- 2 for issuing health care workers, administrators and insurers class-
- based digital credentials and/or certificates, wherein the digital 3
- information sent to said health care workers and administrators 4
- 5 includes class-based controls that condition use and/or access to
- information based at least in part on said class-based digital 6
- 7 credentials and/or certificates.
- 1 A health care computer system as in claim 96 further
- 2 including means for allowing said health care workers, administrators
- and insurers sharing a common object subject to class-based controls 3
- 4 to have access to different portions of the object based at least in part
- 5 on said class-based controls.

l	98. A work process automation system including a matching
2	and/or classification computer that matches tasks to resources based
3	at least in part on assigning classifying the tasks and/or the resources
4	to at least one class.
	00 A substantian system of in alaim 09
ı	99. A work process automation system as in claim 98
2	wherein said matching and/or classification computer includes means
3	for defining at least one class hierarchy based at least in part on rights
4	management information.
1	100. A work process automation system as in claim 98
2	wherein said matching and/or classification computer includes means
3	for matching based at least in part on rights management information.
J	for matering based at reast in part on rights management intermediate
1	101. An automatic governmental and/or societal rights
2	supporting system including a matching and/or classification
3	computing element that assigns and/or classifies entities to at least
4	one class based at least in part on rights management information.
1	102. An automatic governmental and/or societal rights
2	supporting system as in claim 101 wherein the matching and/or
3	classification computing element includes means for defining a class
4	hierarchy based at least in part on rights management information.
1	103. An automatic governmental and/or societal rights
2	supporting system as in claim 101 wherein the matching and/or
3	classification computing element includes means for classifying
4	entities based on at least one of the following:

5	tax	status;

- 6 right to receive certain information;
- 7 right to engage in certain transactions; and
- jurisdiction. 8
- An automatic taxing authority computer including 104. 1
- means for issuing tax class control sets based at least in part on tax-2
- based class definitions, and means for using said tax control sets at 3
- least in part to collect and/or enforce taxation. 4
- A method for adaptively presenting information 1 105.
- 2 differently to different participants, including associating said
- participants with classes, and controlling presentation based at least in 3
- part on class-based control sets included within the information. 4
- 1 106. A method as in claim 105 further including using said
- class-based control sets to match participants with different portions 2
- of said information. 3
- A method as in claim 105 further including using said 107. 1
- class-based control sets to change the form in which information is 2
- 3 presented based at least in part on said classes.
- A method as in claim 105 further including the step of 1 108.
- 2 operating said class-based control sets based at least in part on
- metadata associated with different portions of said information. 3
- A method as in claim 105 further including selecting 1 109.
- said class-based control sets between different images for 2

- 3 presentation based at least in part on one or more classes associated
- 4 with a participant.
- 1 110. A method as in claim 105 further including using said
- 2 class-based control sets to emphasize certain portions of said
- 3 information over other portions in said presentation based at least in
- 4 part on one or more classes associated with a participant.
- 1 111. A method as in claim 105 further including using at
- 2 least one computer having a protected processing environment.
- 1 112. A method for adaptively presenting information
- 2 differently to different participants including:
- 3 classifying the different participants based on capability; and
- 4 using class-based control sets associated with said information
- 5 to change the difficulty of the presentation based at least in part on
- 6 said classification.
- 1 113. A method as in claim 112 wherein the different
- 2 recipients are classified based on grade level.
- 1 114. A method as in claim 112 including the step of
- 2 changing the vocabulary and/or syntactical complexity of the
- 3 presentation based at least in part on said classification.
- 1 115. A method as in claim 112 further including the step of
- 2 using said class-based control sets to ensure that in at least some
- 3 cases, recipients in different classes pay different levels of
- 4 compensation for said presentation.

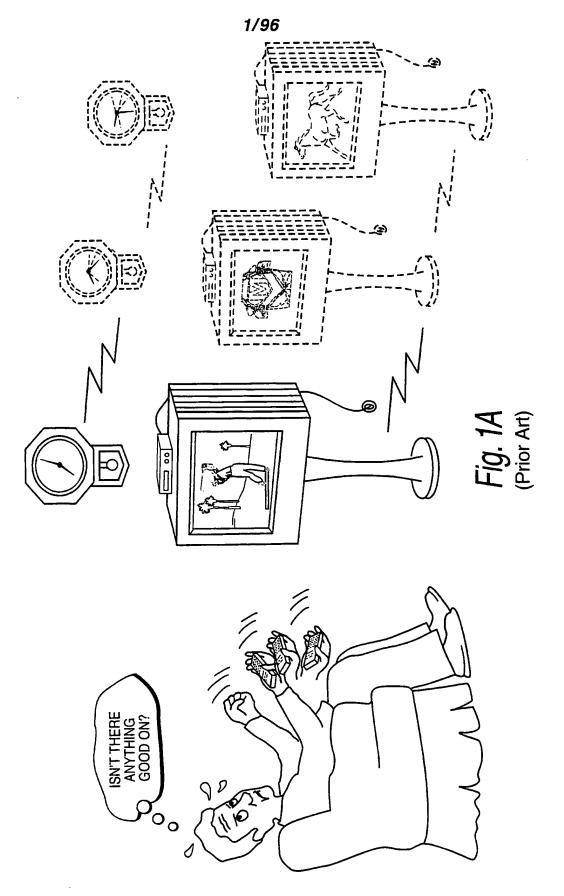

1	116. A method for adaptively presenting information
2	differently to different participants including:
3	classifying different participants based on capability, and
4	using class-based control sets associated with said information
5	to change the language of the presentation based at least in part on
6	said classification.
1	117. An information searching mechanism including a
2	matching computer element that classifies information based at least
3	in part on rights management information, said computing element
4	including means responsive to user requests to search for information
5	based at least in part on said classification.
1	118. An information searching mechanism as in claim 117
2	wherein said matching computer element further includes means for
3	assigning information to classes based at least in part on rights
4	management information.
1	119. An information searching mechanism as in claim 117
2	wherein said matching computer element includes means for scoring
3	information based at least in part on user indicated parameters.
1	120. An information searching mechanism as in claim 117
2	wherein said matching computer element includes means for
3	responding to at least some user requests by providing Universal
4	Resource Locator designations of where information can be found.

1 121. An	information has	indling method:	including t	the step o	t
-----------	-----------------	-----------------	-------------	------------	---

- using class-based controls to control support extraction and/or 2
- 3 aggregation of information.
- An information handling method as in claim 121 further 1 122.
- including using a computing element to extract information from 2
- plural objects based at least in part on class-based criteria. 3
- An information handling method as in claim 121 further 1 123.
- including using a computing element to aggregate information based 2
- at least in part on class-based criteria. 3
- An information handling method as in claim 121 further 1 124.
- including using said class-based controls to represent nested or multi-2
- level classifications. 3
- An information classification method including the step 1 125.
- of generating at least one class hierarchy from other plural 2
- classification hierarchies based at least in part on rights management 3
- 4 information and/or class-based rights management information based
- at least in part on classification metadata. 5
- An information classification method as in claim 125 1 126.
- further including basing said other plural classification hierarchies at 2
- least in part on object metadata. 3
- An information classification method as in claim 125 1 127.
- further including specifying said classification object metadata 2

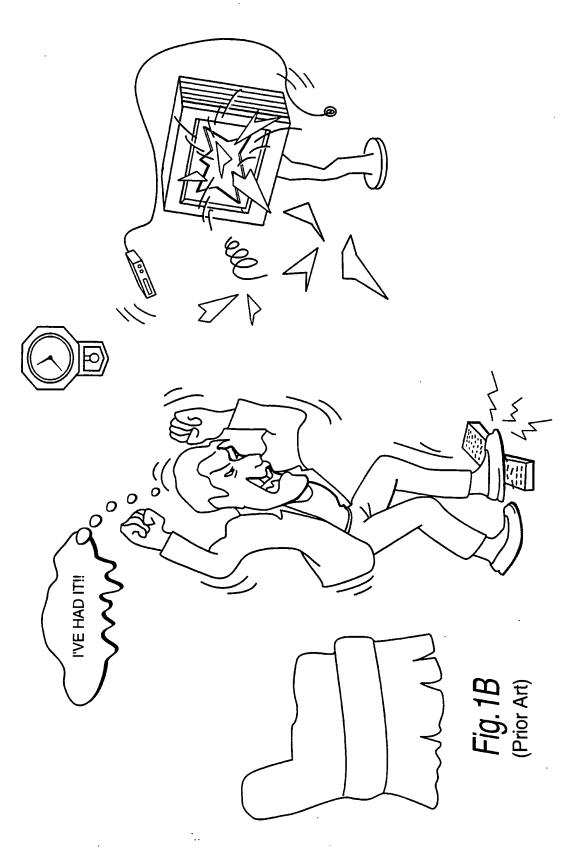

- 3 specified classifications based on at least one of location, name,
- 4 prices, permissions, ISSN, title, author, publisher and/or date.
- 1 128. An information classification method as in claim 125
- 2 further including generating said class-based rights management
- 3 information by classifying classes.
- 1 129. An electronic gambling system including a computer
- 2 that matches gamblers with plural gambling providers based at least
- 3 in part through classifying the gambling providers using rights
- 4 management information.
- 1 130. An electronic gambling system as in claim 129 wherein
- 2 the computer includes means for classifying the gamblers based at
- 3 least in part on rights management information.
- 1 131. An electronic gambling system as in claim 129 wherein
- 2 the computer includes at least one protected processing environment.
- 1 132. An electronic gambling system as in claim 129 wherein
- 2 the computer uses at least one control set to classify, select and/or
- 3 match at least one of said gambling providers, and/or gamblers.
- 1 133. An electronic ticketing system including a computer
- 2 that matches recipients with tickets to events through classifying said
- 3 recipients, said system including a computer that matches tickets
- 4 and/or said events based at least in part on rights management
- 5 information.

- 1 134. An electronic ticketing system as in claim 133 wherein
- 2 a recipient provides a request containing event and rights
- 3 management criteria, and the computer matches the recipient with a
- 4 provider based at least in part on said classifying process.
- 1 135. An electronic ticketing system as in claim 133 wherein
- 2 the rights management information includes method of payment
- 3 information.

Art Unit: 3621

DETAILED ACTION

Status of Claims

1. This action is in reply to the US Application filed October 4, 2004.

2. Claims 1-36 are currently pending and have been examined.

Information Disclosure Statement

The Information Disclosure Statements filed on January 26, 2005, August 4,
 and February 19, 2008 have been considered. Initialed copies of Form 1449 are enclosed herewith.

Double Patenting

4. The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. A nonstatutory obviousness-type double patenting rejection is appropriate where the conflicting claims are not identical, but at least one examined application claim is not patentably distinct from the reference claim(s) because the examined application claim is either anticipated by, or would have been obvious over, the reference claim(s). See, e.g., *In re Berg*, 140 F.3d 1428, 46 USPQ2d 1226 (Fed. Cir. 1998); *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422

Art Unit: 3621

F.2d 438, 164 USPQ 619 (CCPA 1970); and *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) or 1.321(d) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent either is shown to be commonly owned with this application, or claims an invention made as a result of activities undertaken within the scope of a joint research agreement.

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

Claims 1-36 are provisionally rejected on the ground of nonstatutory double patenting over claim 6 of copending Application No. 10162701. This is a provisional double patenting rejection since the conflicting claims have not yet been patented.

The subject matter claimed in the instant application is fully disclosed in the referenced copending application and would be covered by any patent granted on that copending application since the referenced copending application and the instant application are claiming common subject matter, as follows: meta-rights, derived rights, rights transfer, generating a license.

Furthermore, there is no apparent reason why applicant would be prevented from presenting claims corresponding to those of the instant application in the other copending application. See *In re Schneller*, 397 F.2d 350, 158 USPQ 210 (CCPA 1968). See also MPEP § 804.

Art Unit: 3621

Claim Rejections - 35 USC § 103

5. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

6. Claims 1-36 are rejected under U.S.C. 103(a) as being unpatentable over Anand, US Patent No. 6,044,466 (Anand), in view of Workshop on Digital Rights Management, Minutes from Architecture/Infrastructure Session (Infrastructure).

Claims 1, 12, 24:

Anand, as shown, discloses the following limitations:

obtaining a set of rights associated with an item, the set of rights including meta-rights specifying derivable rights that can be derived from the meta-rights (see column 3, line 15-31, column 5, lines 17-23, column 5, lines 1-16)

determining whether the rights consumer is entitled to the derivable rights specified by the meta-rights (see column 5, line 14-21)

deriving at least one right from the derivable rights, if the rights consumer is entitled to the derivable rights specified by the meta-rights, wherein the derived right includes at least one state variable based on the set of rights and used for determining a state of the derived right (see column 5, line 1-16)

Art Unit: 3621

Anand discloses the limitations as shown above. Anand does not directly disclose a state variable (state machine), but Infrastructure does (page 8, paragraph 3)

It would have been obvious to one of ordinary skill in the art at the time of the invention to modify Anand to include the state machine of Infrastructure since this provides a dynamic structure that can express dynamic rights relationships.

Claims 2, 13, 25:

Anand, as shown, discloses the following limitations:

the state variable inherits a state thereof for content usage or rights transfer from the set of rights (see column 5, line 1-16)

Claims 3, 4, 14, 15, 26, 27:

Anand/Infrastructure discloses the limitations shown above. Anand further discloses:

the state variable shares a state thereof for content usage or rights transfer with the set of rights (see column 8, line 7-14)

the state variable inherits a remaining state for content usage or rights transfer from the set of rights (see column 5, line 14-16)

Claims 5, 16, 28:

Anand, as shown, discloses the following limitations:

Art Unit: 3621

the state variable is updated upon exercise of a right associated with the state variable (see column 7, line 5-14)

Claims 6, 17, 29:

Anand, as shown, discloses the following limitations:

deriving a plurality of rights from the derivable rights, wherein the state variable is shared by the derived rights (see column 7, line 1-7)

Claims 7, 8, 18, 19, 30, 31:

Anand discloses the limitations as shown above. Anand does not directly disclose a state variable (state machine), but Infrastructure does:

the state variable represents a collection of states (see page 8, paragraph 3)

a plurality of state variables that determine the state of the derived right (see page 8, paragraph 3)

It would have been obvious to one of ordinary skill in the art at the time of the invention to modify Anand to include the state machine of Infrastructure since this provides a dynamic structure that can express dynamic rights relationships.

Claims 9, 20, 32:

Anand, as shown, discloses the following limitations:

Art Unit: 3621

at least one state variable is unspecified in the derived right, is created during a rights transfer, and is assigned to the derived right (see column 7, line 1-14)

Claims 10, 21, 33:

Anand, as shown, discloses the following limitations:

the state variable is transferred from the derivable rights to the derived right (see column 7, line 15-23)

Claims 11, 22, 34, 36:

Anand, as shown, discloses the following limitations:

generating a license including the derived right, if the rights consumer is entitled to the derivable rights specified by the meta-rights (see column 7, line 24-29)

one or more of the means for obtaining, the means for determining, and the means for deriving are specified in a license (see column 7, line 24-29)

Claim 35:

Anand, as shown, discloses the following limitations:

obtaining, the means for determining, and the means for deriving comprise at least one of computer-executable instructions, and devices of a computer system (see column 4, line 51-67)

Art Unit: 3621

Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Thomas West whose telephone number is 571-270-1236. The examiner can normally be reached on M-R 7:30am - 5pm EST, ALT Fridays off.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Andrew Fischer can be reached on 571-272-6779. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free). If you would like assistance from a USPTO Customer Service Representative or access to the automated information system, call 800-786-9199 (IN USA OR CANADA) or 571-272-1000.

Workshop on Digital Rights Management for the Web

World Wide Web Consortium

22-23 January 2001

INRIA - Sophia-Antipolis, France

2004, Route des Lucioles

WORKSHOP PROGRAM
Workshop Notes & Presentations
Workshop Summary Report
Submitted Position Papers
Participants
Mailing List
Call for Participation
Background Reference Material

Important dates

Papers submission deadline: 22 December 2000 Registration deadline: 12 January 2001

Workshop meter

On 20 December 2000: 62 registrations, 41 position papers received, and 69 persons on the mailing list.

Last update \$Date: 2001/04/26 16:55:07 \$ by \$Author: rigo \$

[Minutes Overview] [Workshop Home] [Previous:Publishers Requirements] [Next:Architecture: Interoperability and Standards]

Minutes from the Architecture/Infrastructure Session

Please refer to the position-papers and slides for authoritative answers. The following minutes are only a snapshot of Presentations and Discussions

- INDECS Framework Data Definitions Godfrey Rust (Indecs Project)
- URI's and Object Identifiers Dan Connolly (W3C)
- Principles for Standardization and Interoperability in Web-based Digital Rights Management John Erickson (Hewlett-Packard)
- Open Digital Rights Management Renato lannella (IPR Systems)
- Digital Object Identifier Norman Paskin (Int. DOI Foundation)
- Discussion

Godfrey Rust (<indecs> Project), INDECS Framework Data Definitions

See also the [Slides (ppt)] and the <indecs> Framework

The <indecs> project ended 2000, now we are new company called <indecs> framework. Look at our online document: Principles, model, and data dictionary, June 2000.

We see DRM in terms of metadata, as a metadata problem. The description is covered in Open eBook, ONIX, and my company.

Here is the scheme:

- 1. people make stuff
- 2. people use stuff

3. people do deals about stuff

The scope is stuff. This can be characterized in terms of:

- 1. Parties
- 2. Creations
- 3. Agreements

Rust projected a diagram showing the high granularity in the <indecs> model, with hierarchy of parties and agreements. He noted that you must pass along the metadata in a structured defined way to permit computational processes.

The following things are required:

- functional granularity: you must be able to identify stuff at any level of granularity
- unique id
- who says so designated authority
- appropriate access (who can do what)

In the 1980s, there were few schemes for description, today there are many, lists ten major ones, including MPEG-7, ONIX, SMPTE, RIAA/IFPI, and several more.

Here are the <indecs> principles:

- All metadata is just a view (example: about the work versus about the manifestation, and more, each of which may have its own rights)
 - views must not be confused; mistaken identity can be disastrous to rights management
 - o views need to be interoperable
- Almost all terms need identifiers
 - o values must be defined and identified
 - o need standard vocabularies and ontologies.
 - automation need for disambiguity. There is an existing vocabulary for some things: territories, language, currency, date/time and some others. But we need dozens of others.
- Events are key to interoperability
 - o most metadata is stuff or people based
 - o events description are key to rights management

Godfrey Rust gave an example how this would work:

- 1. make event the first class object, e.g., Rust creating these slides
- 2. then all the other elements are attributes: author, date, title, etc.
- next event, e.g., Rust showing this Slide -- it has attributes too and references the previous event, thus connecting the creative items
- next event: Norman Paskin adapts (transforming event) these slides before he shows it at another meeting, thus creating new attributes and references to preceding events, thus connecting the creative items

This model has the same information as other metadata structures, just organized differently to serve rights management.

Here's another event that bears on rights: agreeing. What goes into the agreement is what goes into descriptive metadata, what he had, what he did. Also assertion by a trusted entity that verifies or authenticates.

Using the event structure, now have six events regarding these slide-show. See how you can use events to **integrate** descriptive and rights metadata.

But we need rights vocabularies to make this work, on a parallel with the need for vocabularies to serve descriptive metadata.

Dan Connolly [W3C], W3C URI Design Principles

See also the corresponding Activity within W3C and the slides

He outlined W3C's Philosophy of Standards: Help people do the right thing.

URIs will have a relationship to a potential DRM-Activity. Connolly also suggests that DRM discussion focus on payments and rights negotiation as much as prevention of access.

All names are ultimately local. Global naming depends on social agreements and trust. HTTP is not the only protocol. For the Web, we use DNS (Domain Name System). Don't forget, HTML is not the only file type. Things can evolve, you can use proxies and thus use an old name against new protocol. But URIs are the only thing in that arena. New protocols can be used with existing names. There is no need to change names just because you change protocols. We don't need to make new URI schemes just because we have made a new data format.

There is opacity: Don't peek inside names, names (URIs) are not user interface. Don't reinvent redirection in http, it is not a service, they are not locators. DNS supports multiple A records. Lots of administrative hierarchies fit in current http and DNS, you don't need to

invent a new URI scheme.

URIs were not designed as a user interface. Don't use a URN as a brand name. To establish a new trusted brand name, trying to wedge them into DNS is a problem, you're ought to use <title>

John Erickson (HP), Principles for Standardization and Interoperability in Web-based Digital Rights Management

See also the slides and the Position Paper

John Erickson started by re-inforcing what was already heard during previous sessions: When we think about DRM, we have to separate expression of rights information and policies from the enforcement of those rights. We have to think of a layered model, separate the expression of rights information from the info for discovery and from implementing and enforcing those rights.

What is the W3C's role here? We think W3C should recommend a platform. Erickson put emphasis on the development of a language and a protocol for IPR policy expression, discovery, and interpretation.

The W3C should not recommend a standard DRM system. But we should provide a basis for the interoperability of such systems. Core should be to find a reliable way to express and transfer rights information. Remember the design principles of the web, IPR work ought not violate them.

Erickson developed the following set of requirements:

- never interfere with users' ability to discover info (incl rights info) on the web, this is what I
 mean by universal access, so I can decide about whether to access
- always communicate the policies and technical restraints in understandable language
- policies are communicated in fair and open ways
- need for trust, need to have a basis to trust the assertions being made, need a mechanism to assure trustworthiness
- IPR information and policies must be discoverable and minimally interpretable in dependent of any given vendor's solution
- the languages and protocols must be designed for evolution
- web based mechanism must allow for owners to choose different tools and consumers to use different tools to discover and interpret rights info
- cool new content that comes along ought not break the DRM systems or break the languages and protocols

Here's our [HP publishing group] proposal: PREP (Policy and Rights Expression Platform, see the <u>Position Paper</u> for more information). It would be a framework to express and interpret the policies and info. It should complement laws and self-regulatory programs. It should be consistent with prior work, e.g., P3P.

What are the building blocks of PREP?

- · semantics policy interpretation mechanisms
- objects rights messaging protocol
- syntax rights expression languages

Erickson concluded:

- W3C should recommend a platform for IPR policy expression, discovery, and interpretation.
- 2. W3C should not recommend a standardized digital rights management system.
- 3. Core should be reliable way to express and transfer rights information.

Renato Iannella (IPR Systems), Open Digital Rights Management

See also the slides and the Position Paper

We need to define DRM formally. Customary DRM definitions tend to emphasize protection, enforcement, security. We need to remove the security/locking focus of DRM. There are a lot of definitions out there. But we want DRM to be broader: describe, identity, trade, monitor, track, and manage rights holder relationships. We want to leave behind the "creation waterfall" concept of create => trade => use as a line. We want to look at a circular life cycle approach (compare Rust events). We use the same terms: create-trade-use and add reuse = recreate. Then the life cycle is more accurately seen as circular. He gave an example of transparency in presenting rights, from Adobe eBook. You are authorized to get the copy. It is OK to copy (up to 10 times each week), to print, to lend. But you cannot give or read aloud. He suggested, that it should be possible to pay for usage, not possession.

The following are building blocks for a DRM architecture:

- A better metadata framework: He would like it to be in RDF
- Trust (digital signatures)
- There are lessons to learn from P3P, CC/PP
- identification (URIs)
- XML packaging and tools

use the <indecs> model: content, parties, rights. Each one is a kind of class. Parties
described would be: author, corporate, agent, publisher. The content would be classified
in work, expression, manifestation, item. Rights would be classified in usages, rewards,
constraints.

Renato lannella presented the <u>ODRL</u>. He sees it as a starting point for a DRM Language, that could be developed within W3C.

Concludes: W3C Role could be:

- W3C Digital Rights Language Working Group to develop semantaics of a digital rights language encoded in XML
- Trusted Metadata Working Group to develop architecture to support encoding and transmission of DRM and other metadata
- DRM Interest Group to discuss next steps and establish relationship with other communities

W3C can solve some part of the DRM problem, coordinate others, and empower the user community.

Norman Paskin (Int. DOI Foundation), Digital Object Identifier (DOI)

See also the slides (ppt) and the Position Paper

Paskin was presenting the activity of the DOI Foundation. We have spent three years developing an identifier system for digital objects. We have been influenced by <indecs> analysis and implementations, e.g., ONIX and by consideration of digital object infrastructure (e.g., CNRI work).

DRM must be maximally extensible. DRM is digital management of rights, not just management of digital rights Practical rights management will require dealing with both digital and non-digital rights. Unique identification is essential for automation to work on this.

Description info and rights info are not distinguishable. Any piece of description may be needed in a rights transaction.

Creative items used to be physical, today we have both a physical and digital manifestation, so sometimes there are two identifiers, e.g., ISBN for one, URL for the other. But if we are going to automate transactions we must dis-ambiguate meanings. We need to define word like book in the spaces it may found in, the ISBN space or the <indecs> space.

There will not be one model for applying identifiers, it will differ for content communities, given practical implications, e.g. ONIX, MPEG-7, etc. A work may be an original manuscript version, the work in the abstract, a draft, a copy in a publication, a digital copy not in a publication, a reprint, etc.. In each role, there will be different ids and attributes. We don't have to have complete knowledge representation. We can build on agreements over what an identifier means within a given namespace

About names and locations, he said that a name is a location in a defined namespace, thus all names are locations is trivially true.

As practical needs for DOI, Paskin identified:

- multiple instances
- · persistence in face of change
- · mgt of non-digital entities
- · de-referencing, resolution

Who should be responsible for naming: Standards bodies, rights collectives? Examples are:

- EAN/UPC bar code system
- ISBN system
- URI system But what in the digital realm?
- URLs are a poor system for publishers

Identifier needs to be actionable. They can be the basis for rights management. But there won't be one place to go for:

- e.g., directory of parties (names of people, sort of, as for music, is developing a directory)
- · e.g., ontology of scientific article

We need to involve stakeholders, what is the W3C good for here?

Paskin used an aphorism: I think what is called media convergence really is "people convergence" (with the correlative problem of communication). Formalisms are essential in their place but must be explained. What we ought to care about does not just encompass the web.

DOI system offers:

- numbering use any identifier
- description can use <indecs> framework

- action handles allow to link to instances
- It is persistent, granular, flexible, can wrap other identifiers

Discussion

Not for all questions and answers, the author was identified. In this case, you'll see only question and answer

Question: is URI primarily address where you find something?

Dan Connolly (W3C): I don't think so.

Danny Weitzner (W3C): Question to Godfrey Rust and John Erickson: Is there a consensus point? John said there should be a rights management schema. How modular is the <indecs> system? Does anyone who uses something that falls under the <indecs> model have to use the whole model?

Godfrey Rust (<indecs>): It is a matter of how you structure your information. If we use the event model to organize our system, this should lead to interoperability. If one wants to express things in most efficient way, an events - systems will be very powerful. Other systems/legacy info can be transformed into events model One doesn't have to organize all data into high level of functionality. We can still use information that is fairly low grade.

John Erickson (HP): An event model is powerful, because it allows description of certain rights relationships that we might think of in terms of electronic contracts. If we speak about rights languages, we can imagine a lot of different types of transactions. There are things that need to be declared, between an author and a publisher. It is a dynamic activity with lots of outcomes that the event model can characterize. The event model is the basis of an ontology. We need different vocabularies for different purposes. A contract between an author and a publisher is like dynamic state machine. The event model is a powerful way to express that. Things like rights vouchers/licenses and output of individual states are dependant on dynamic events.

Maximilian Herberger (Uni Saarland): Events are only one side. The event model reflects the state of subjective rights within a specific contract. We also need a way to describe how things fit together or what things have in common. We need a language at a higher level about objective rights. This language should be able to express classes of contract relationships. I think the combination of the two is the solution here.

Jonathan Schull (Digital Goods): Suppose I'm a publisher and I want to publish a book electronically. There are a whole lot of ways to do this. Each combination will have a

different address, thus creating a different digital object. A publisher doesn't really care about the locations, he only cares about initial work. He may decide that people shouldn't print it, or that people want their money back. As a publisher, I want to have only one thing to do.

Jonathan D. Hahn (Versaware): In a contrarian mode I say, well, about these "events," you know publishers may think of only one event, the one that came into play when I signed on to publish this work.

Godfrey Rust (<indecs>): A DOI is a single number for the object

Dan Connolly (W3C): What's the first letter of most DOIs? Names are little pieces of communication. Making up a name without thinking about communication is sort of silly. We don't decide anything by ourselves, we decide together with people we communicate with. I don't think you can invent new technology that solves all the social problems involved

Norman Paskin (DOI): The web is not the universal information space. There are things, which aren't on the web. We need to identify them too.

Eric Miller (OCLC): you can place something on the web without using DOI. I represent libraries, so if you publish, you want consumer to get access to stuff - you have to talk to your customer base to find out whether they will use access mechanism you are designing to access content. What are the things we are trying to automate here? Let's think about a scenario with implemented DRM, let's do what-if scenarios.

Question: Why are ontologies so important?

Answer: Take a look at ontologies and what publishers require and you have your problem defined

Eric Miller (OCLC): A question not yet resolved is, what happens in DRM if different kinds of people are accessing the same object, e.g. in the context of a library.

Robert Bollick, (McGraw-Hill): This is already covered. It is like every consumer/publisher interaction which is covered by the requirements. More information can be found on <u>publishers.org</u>. The name of the document is publishers DRM requirements.

Comment: We will get a lot of input/requirements from many different constituencies, e.g. record industry, book industry etc.. We need to consider the evolution of technology - technical components should be able to move indepently from one another. We have a conceptual model: Take a language and a context used by different areas and avoid using

two different terms for same requirement. We need to build a common platform. That gives you a mechanism to do extensions that are truly unique. Medicine, oil-drilling all use different terminology, but a conceptual model helps us to decide whether their need is unique and helps us develop an orthogonal system, and avoid redundancy

Scott Foshee, (Adobe) states agreement with the interest in fine-grained identification implied by the <indecs>/DOI ideas.

Question: We won't be able to define precisely what work is. We should avoid defining it. While broad categories of interactions may have been studied, do you think your publishing model is extensible to images, text, font? To Godfrey Rust: Do you think we can extend this to publishing of aggregations, e.g. written book by an author combined with paper it is printed on?

Godfrey Rust (<indecs>): Take a look at indecs papers. The answer is yes, I think this is possible.

Answer: The same is true for ONIX - thinking about selling pieces of a work

Danny Weitzner (W3C): Commenting on Norman's point of the Web not being the univerals information space, I think that in the discussions so far we showed lots of attention on commercial needs. The question is whether we would like common framework for discovering rights of document whether or not produced principally for trade or not? E.g., does a picture of my 3-year old fit into this framework? We risk to produce big costs if there are two classes of documents: One that fits into trading and others who don't. If we look at music, we see, that non-traditional documents are traded. I'm a bit concerned about the application of these systems only to "trade" items in the web, ignoring or disenfranchising the little objects which also have rights associated with them.

Godfrey Rust (<indecs>): The model we worked on are neutral as far as commerce is concerned. It can be used for picture of 3 year old. We haven't actually developed framework though. A critical piece of work is to decide what those verbs (note: for the actions) are. The model still needs a lot of detailed work. We have roughly agreed on the direction we take. Please don't overestimate what we've done.

Norman Paskin (DOI): <indecs>/DOI is about transactions. We mean by transaction anything, whether it's free or not. We focused on e-commerce. Our economic model is based on the barcode model. For some transactions, the financial cost will be zero.

John Erickson (HP): What is the methodology for rationalising to interpret new dimensions for a given problem space? There has been a lot of talk about notion of ontologies. We

have a certain way of thinking about a problem, and perhaps another way. Now we try to find ontologies to identify common points. Where does the notion of rationalizing problem spaces conflict with ontologies? I can see that it resonates in a closed room ...

Rob Koenen, MPEG: MPEG-7 is standard for describing content. Based on XML schema, there are principle notions like actor, people etc. Those are listed in a concepts list. There are basic concepts like shape, color etc. People can build their own ontology. MPEG has just decided to do a data dictionary for a rights language. MPEG has issued a call for requirements on 19 January 2001. Koenen invited W3C to work with MPEG on working on this problem

Peter Schirling (IBM & MPEG): We should try to avoid unnecessary duplication. We allow each discipline to build an ontology from a common frame, to reduce duplication of elements. Under that framework, different sectors can add their own things to a specific concepts list. Currently, we have only concept lists very specific to audio-visual content.

Scott Foshee (Adobe): There are two classes of objects (things): Under control and not under control. I wanted to state my agreement with Danny Weitzner, that there should only be one class. Clipart in a presentation software is an aggregation with content you created. By using a product that was licensed, everything on a harddisk is aggregated content work. DRM should be able to handle that. Take a picture of Danny Weitzner and apply a filter may result in aggregate work. The process that is applied results in another object. We need to get something that is workable, because this technology will be everywhere

Coffee Break, but not enough coffee for some

INFORMATION DISCLOSURE STATEMENT UNDER 37 C.F.R. § 1.97 (b)

Pursuant to 37 C.F.R. §§ 1.56 and 1.97(b), Applicants bring to the attention of the Examiner the documents listed on the attached PTO-1449. This Information Disclosure Statement is being filed before the first Office Action on the merits for the above reference application. The listed documents were cited in a communication from the International Search Authority. The International Search Report was mailed on March 2, 2005. Copies of the listed documents are attached.

It is requested that the accompanying PTO-1449 be considered and made of record in the above-identified application. To assist the Examiner, the documents are listed on the attached form PTO-1449. It is respectfully requested that an Examiner initialed copy of this form be returned to the undersigned.

Abstract of JP3063717

PURPOSE: To decrease the operation burden by determining one from in processings defined in common among all objects corresponding to a selected icon, and repeating this processing to all the objects corresponding to the selected icon. CONSTITUTION: The subject system is provided with an icon selecting means 11, a processing selecting means 12, and a repetition processing means 13, plural icons corresponding to an arbitrary object being a processing object are selected, and also, one is determined from in processings defined in common among all objects corresponding to the selected icon, and the determined processing is repeated to all the processing request to a computer from a user, especially, at the time of requesting the same processing to plural processing objects, a monotonous repeating operation is replaced with a batch operation, and the operation burden of the user can be reduced.

1 発明の名称

アイコンの複数選択による一括処理方式

2. 特許請求の範囲

処理対象である任意のオブジェクトに対応する アイコンを複数選択するためのアイコン選択手段 と、前配選択されたアイコンに対応するすべての オブジェクトの間で共通に定義される処理の中か 6一つを決定するための処理選択手段と、前配決 定された処理を前記選択されたアイコンに対応す るすべてのオブジェクトに対して反復するための 反復処理手段とを具備して構成したことを特徴と ナるアイコンの複数選択による一括処理方式。

8. 発明の詳細な説明

(産業上の利用分野)

本祭明はコンピュータと利用者との間の対話方 式に関し、特に、その利用者からコンピュータへ の模求の伝達方式に関する。

(従来の技術)

従来、コンピユータと利用者との間でオブジエ

クト指向の対話を行う場合には、処理対象である オブジェクトに対応する1個のアイコンに対し、 実行可能な処理を一つ選択していた。また、利用 者が複数のオブジェクトに対して同一の処理を要 求する際にも、それぞれに対してブイコン選択、 および処理選択の操作を繰返して行つていた。

(発明が解失しようとする練題)

上法した従来のコンピュータと利用者との間の 対話方式で操作性を向上する必要がある場合には、 単調な繰返し操作を一括操作に関換えることによ り、利用者の操作負担の軽減を図る必要がある。 上述した従来技術では、利用者からコンピユータ への処理要求において、各オブツエクトについて 必ずアイコンの選択、および処理の選択の操作を 行わせければならず、利用者の操作負担は大きい という欠点がある。

本苑明の目的は、処理対象である任意のオブジ エクトに対応するアイコンを複数選択するととも K、選択されたアイコンド対応するすべてのオブ ジェクトの間で共通に定義される処理の中から一

「つを抉定し、決定された処理を選択されたアイコ ンに対応するすべてのオブジェクトに対して反復 よる一括処理方式の一実施例を示すブロック図で することによつて上記欠点を除去し、操作負担を **減ずることができるように構成したアイコンの復** 数選択による一括処理方式を提供することにある。

(課題を解決するための手段)

本発明によるアイコンの複数選択による一括処 理方式は、アイコン選択手段と、処理選択手段と、 反復処理手段とを具備して構成したものである。

アイコン選択手段は、処理対象である任意のオ プジェクトに対応するアイコンを複数選択するた めのものである。

- 処理退択手段は、選択されたアイコンに対応す るすべてのオブジェクトの間で共通に定義される 処理の中から一つを決定するためのものである。

反復処理手段は、上配決定された処理を上記選 択されたアイコンに対応するすべてのオブジェク トに対して反復するためのものである。

(突筋例)

次に、本発明に関して図面をお照して説明する。

第1回は、本発明によるアイコンの複数選択に 83.

... 第1図において、11はアイコン選択手段、 1 1 は処理選択手段、1 1 は反復処理手段である。

第1図にかいてアイコン選択手段11は利用者 が選択する面面上の複数のアイコンに対応する各 オプジェクトの情報を取得して配憶する。また、 当該情報は処理選択手段12に伝えられ、それら オプジェクトで共通に定義されている実行可能処 ほがメニユーとして画面上に表示される。処理選 択手段11は利用者にその中の一つを選択させ、 選択された処理の情報を取得して記憶する。反復 処理手段11は、処理選択手段12で記憶した突 行処理を行りモジュールに対し、アイコン選択手 段11で記憶したオブジェクトの情報を1件づつ 伝達し、オブジエクトの情報がなくなるまで上記 動作を繰返す。とれにより、本方式は構成される。

第2回~第7回は、それぞれ第1回に示すてイ コンによる操作例を示す説明図である。

以下に、第2図~第7図を参照して面面での操 作用を説明する。

第2図において、アイコンをポインタ10で指 示すると、とれにより選択が行われ、選択が配体 されたフォルダブイコン51は反転表示される。 引続き、第8図にかいて、他のアイコンをポイン タ28で指示すると、とれにより複数選択が可能 であり、選択が記憶された文章アイコン 5.2 は同 様に反伝表示される。とれらは、本方式のアイコ ン選択手段によつて行われる。第4回において、 メニユーる目をポインタ20で指示すると、これ により選択を記憶したすべてのアイコン 5 1、 5.2 に共通的に定義された処理が提示される。 C のとき、共通して選択可能なメニユー項目は、 11で代表されるように実設文字で表わされ、そ りでないメニュー項目は31で代表されるように 破線文字で扱わされる。 萬 5 図において、ポイン タ10でメニュー50中のメニュー項目33を指 示するととにより、処理の選択が行われて選択が 記憶される。とれらは、本方式の処理選択手段

1 1 によつて行われる。第6回においては、処理 選択手段により記憶されている彼写という処理が フォルダアイコン51に適用された結果、同様の フォルダアイコン58が面面上に生成されている。 引挽き、第7図においては、文書アイコン51に も彼写処理が適用され、同様の文書アイコン 5 4 が面面上に生成されている。これにより、第6図 ⇒よび第7図の処理が実行されている間は、利用 者は何等操作をする必要がなくせつたわけである。

(発明の効果)

以上説明したように本発明は、処理対象である 任意のオプジェクトに対応するアイコンを複数週 択するとともに、選択されたアイコンに対応する ナベてのオブジエクトの間で共通に定義される処 理の中から一つを決定し、決定された処理を選択 されたアイコンに対応するすべてのオブジエクト に対して反復するととによつて、利用者からコン ピュータへの処理要求において、特に複数処理対 象に対して阿一処理を要求する際に、単例な練返 し幾作が一括操作に置き換えられ、利用者の操作

負担が軽減できるという効果がある。

4. 図面の簡単な説明

第1図は、本発明によるアイコンの複数選択に よる一括処理方式の一実施例を示すブロック図で ある。

第2図~第7図は、それぞれ第1図に示すアイコンによる操作例を示す説明図である。

System for permitting access to data field area in IC card for multiple services.

A system for permitting access to a data field area in an IC card for multiple services using an individual card holder identification number for each of a plurality of data fields (61, 62, 63) or for each group of data fields. Data field identification information (11), a personal identification number (12), access qualification information (13), and an authentication code (14) are supplied to the IC card before an execution of an access to the data field. An authentication is made (in 32, 33) between the personal identification number and the authentication code stored in identification number and the authentication code supplied to the IC card. Based on the result of authentication, an access to the data field area (61, 62 or 63) to which access is requested is permitted within the limit of the access right stored in the IC card (memories 51, 52, 53) corresponding to the access qualification information supplied to the IC card.

Bundesdruckerei Bertin

Description

SYSTEM FOR PERMITTING ACCESS TO DATA FIELD AREA IN IC CARD FOR MULTIPLE SERVICES

10

15

20

25

30

35

BACKGROUND OF THE INVENTION

1. Field of the Invention

The present invention relates to a system for permitting access to a data field area in an integrated circuit card (IC card) for multiple services.

2. Description of the Related Art

In general, in the use of an IC card for multiple services, a card Issuer, a service supplier, , a card acceptor, and a card holder are involved. An IC card has a plurality of data fields for the multiple services, and for each of the data fields, the access right, access qualification, of card Issuer, service supplier, card acceptor, and card holder should be predetermined. Namely, although a person has access right to a predetermined data field of an IC card, that person should not be authorized to have access to a data field of the IC card other than the predetermined data field.

It is desired that access is permitted only within the limit of the access right to a predetermined data field of a card holder, and access outside such limitation is not permitted, so that the data fields cannot be used in an unauthorized manner.

In the prior art, only a personal identification number (PIN) and an authentication code (AC code) for the whole of an IC card are provided for an IC card for multiple services, and therefore, once a coincident result is obtained as the result of an authentication of the personal identification number and the authentication code, access to all data fields in the IC card becomes possible.

As a result, it is possible for a person, for example, a card acceptor, who is not authorized to have access to the data field in question, will be able to obtain access to the data field in question. This constitute an unfair use of the IC card and a violation of the principle of secrecy of the IC card. Therefore, these problems of the prior art must be solved.

SUMMARY OF THE INVENTION

It is an object of the present invention to provide an improved system for permitting access to a data field area in an IC card for multiple services.

In accordance with the present invention, there is provided a system for permitting access to a data field area in an IC card for multiple services using an individual card holder identification number for each of a plurality of data fields or for each group of data fields, the system comprising: a plurality of data fields in the IC card; a sequence of a data field selection portion, a personal identification number authentication portion, and an access right selection portion, input portions for inputting data field identification information, a personal identification number, access qualification information, and an authentication code; a data field access portion and an access request portion; and storage portions for sorting

information for data field control. An authentication between the information stored in the storage portions and the information input through the input portions is carried out.

Based on the cumulative result of a selection of a data field, a authentication of the personal identification number, a validation of the authentication code, and a selection of the access right, access to a data field area to which access is requested is permitted within the limit of the selected access right.

BRIEF DESCRIPTION OF THE DRAWINGS

In the drawings,

Fig. 1 is a perspective view of an IC card to which the system according to the present invention is applied;

Fig. 2 shows a fundamental combination of an IC card and a terminal apparatus;

Fig. 3 shows a prior art system for access to a data field area in an IC card for multiple services:

Fig. 4 is a schematic diagram of a system for permitting access to a data field area in an IC card for multiple services according to an embodiment of the present invention;

Fig. 5 shows an example of combinations of the authentication code and the access right; and

Fig. 6 is a flow chart of the operation of the system of Fig. 4.

DESCRIPTION OF THE PREFERRED EMBODIMENTS

Before describing a preferred embodiment of the present invention, an IC card to which the system according to the present invention is applied, a fundamental combination of an IC card and a terminal apparatus, and a prior art system for access to a data field area in an IC card for multiple services will be explained with reference to Figs. 1, 2, and 3.

As shown in Fig. 1, an IC card has contacts adapted for electrical connection with external apparatuses, an integrated circuit module beneath the area containing the contact electrodes, and an area to be embossed. As shown in Fig. 2, the circuit of the IC card includes the contacts, a central processing unit (CPU), a read only memory (ROM) for storing a control program, and an electrically erasable and programmable read only memory (EPROM) or an erasable and programmable read only memory (EPROM) for storing data fields, input information, and control information. The circuit of the IC card can communicate with the program portion in the terminal apparatus.

As shown in Fig. 3, in the prior art, the authentication between the input personal identification number 101 and the stored personal identification number 301 is carried out in the personal identification number authentication portion 201. Based on the coincident result of this authentication, the validation between the input authentication code 102

20

and the stored authentication 302 is carried out in the authentication code validation portion 202, and based on the result of this validation, the decision obtained from the stored information 303, 304, and 305 for data field. Identification No. 2, and No. 3 corresponding to the data fields No. 1, No. 2 and No. 3 is carried out in the data field decision portion 203 with respect to the input data field identification information 103.

Once one of the data fields No. 1, No. 2, and No. 3 is chosen according to the decision of one of the data field identification No. 1, No. 2, and No. 3, access through the access request portion 104 is permitted to the chosen data field.

A system for permitting access to a data field area in an IC card for multiple services according to an embodiment of the present Invention is shown in Fig. 4. The system of Fig. 4 includes a data field input portion 11, a personal identification number input portion 12, an access qualification input portion 13, an authentication code input portion 14, an access request portion 2, a data field selection portion 31, a personal identification number authentication portion 32, an authentication code validation portion 33, an access right selection portion 34, and a data field access portion 4.

The system of Fig. 4 also includes a data field (No. 1) 61, a data field (No. 2) 62, a data field (No. 3) 63, a memory for data field control (No. 1) 51, a memory for data field control (No. 2) 52, and a memory for data field control (No. 3) 53. The memores 51, 52, and 53 corresponding to the data fields No. 1, No. 2, and No. 3, respectively.

For example, information for the data field identification No. 1, personal identification number (No. 1), authentication code Nos. 11, 12, 13 ... 1n, and information for the access right Nos. 11, 12, 13 ... 1n are stored in the memory 51. The authentication code No. 11 and the information for the access right No. 11 comprises an access qualification No. 1, the authentication code No. 12, and the information for the access right No. 12 comprises an access qualification No. 2, and so on. The authentication code No. 1n and the information for the access right No. 1n comprises an access qualification No. n.

Here, the information for the access right concerns which one of the processes of reading, writing, deleting, and re-writing should be permitted.

In the data field selection portion 31, a comparison between the input data field identification 11 and the data field identification stored in the memories 51, 52, and 53 is carried out, so that one of the data field Nos. 1, 2, and 3 is selected according to the coincident result of that comparison.

In the personal identification authentication portion 32, after the above-mentioned selection of the data field, the authentication between the input personal identification number and the personal identification number stored in the memory corresponding to the selected data field is carried out so that it can be confirmed whether or not the person inputting the personal identification number is the person authorized to use the data field in question

In the authentication code validation portion 33, after an affirmative confirmation of the personal

identification, a validation concerning the input authentication code and the authentication code stored in the memory corresponding to the selected data field and the input access qualification is carried out so that it can be confirmed whether or not the access executor has the proper authentication code.

In the access right selection portion 34, after an affirmative confirmation of the authentication code, an extraction of the access right information stored in the memory corresponding to the selected data field and input access qualification information is carried out so that the access right permitted to the access executor is selected.

In the data field access portion 4, after the selection of the access right, the access to the selected data field is carried out corresponding to the permitted access right in response to the input access request through the access request portion 2

An example of the combinations of the authentication codes and the access rights is shown in Fig. 5.

The operation of the system of Fig. 4 will be described below with reference to the flow chart of Fig. 6.

Upon input of an access start request, a data field identification, a personal identification number, access qualification information, and an authentication code, the data field identifications stored in the memory are searched and the data field corresponding to the input data field identification is selected (step S1). When there is no corresponding data field, the process proceeds to the error indication.

When the data field in question is selected, the process proceeds to step S2, where the personal selected data field is authenticated with regard to the input personal identification number. When the stored personal identification number does not coincide with the input personal identification number, the process proceeds to the error indication.

When the stored personal identification number coincides with the input personal identification number, the process proceeds to step \$4 where the authentication code corresponding to the input access qualification information is derived, and the validation concerning the derived authentication code and the input authentication code is carried out. When the derived authentication code does not coincide with the input authentication code, the process proceeds to the error indication.

When the derived authentication code coincides with the input authentication code, the process proceeds to step S6, where the access right corresponding to the input access qualification information is derived from the memory for data field control and the decision for access right is made.

Then, in step S7, the request for access to data in the selected data field is executed within the range of the above-described access right.

Claims

1. A system for permitting access to a data

65

field area in an IC card for multiple services using an individual card holder identification number for each of a plurality of data fields or for each groups of data fields, said system comprising:

a plurality of data fields in the IC card;

a sequence of data field selection means, a personal identification number authentication means, an authentication code validation means, and an access right selection means; an input means for inputting data field identification information, a personal identification number, access qualification information, and an authentication code;

a data field access means and access request means; and

storage means for storing information for data field control;

comparisons between the information stored in said storage means and the information input through said input means being carried out, for authentication, validation, and selection; and based on the cumulative result of a selection of a data field, an authentication of a personal identification number, a validation of an authentication code, and a selection of an access right, access to a data field area to which access is requested is permitted within a limit of the selected access right.

2. A system according to claim 1 wherein each memory for data field control stores data field identification information, a personal identification number, a plurality of authentication codes, and a plurality of access rights information.

3. A system according to claim 1, wherein the access qualification information input by said input means is an information for selecting an authentication code and an access right.

4. A system according to claim 1, wherein the access right information stored in the memories for data field control selected by the access qualification information is represented by one of the processes of reading, writing, deleting, and re-writing.

5. A system according to claim 1, wherein said personal identification number authentication means is operated based on signals from the data field selection means, the personal identification number input means, and the memories for data field control.

6. A system according to claim 1, wherein said authentication code validation means is operated based on signals from the personal identification number authentication means, the access qualification input means, the authentication code input means, and the memories for data field control.

7. A system according to claim 1, wherein said access right selection means is operated based on signals from the authentication code validation means, the access qualification input means, and the memories for data field control. 5

Abstract of JP6131371

PURPOSE: To obtain the information on the reactions of the viewers and to improve the safety of the information control by acquiring quickly the information and attaining the flexible payment of the charge. CONSTITUTION:The input of information is carried out to an information recording/reproducing device 1011 and also the information is recorded and reproduced to an information recording medium 1012 under the control of a right control part 1015. When the input of information is controlled to an information input part 1013 together with the control of recording given to the medium 1012 respectively, the part 1015 controls the information input function or the information recording function of the part 1013 by a control signal 116. A signal 103 is sent to the medium 1012 through the part 1013 as the information 111. When the reproduction of information is controlled to the medium 1012, the part 1015 reads the information 118 on the type and the reproduction conditions, etc., on the information itself out of those information recorded in the medium 1012. The information 118 is sent to a display part 1017 and shown there as the display information 115.

(54) 【発明の名称】 情報提供収集装置

(57)【要約】

【目的】 情報の迅速な入手、柔軟な料金支払いを可能 とし、視聴者の反応に関する情報を得る。また、情報管 理の安全性を高める。

【構成】 権利管理部1015の制御の下に、情報記録 再生装置1011への入力、情報記録媒体1012への 記録及び再生が行なわれる。情報入力部1013への入 力、または情報記録媒体1012への記録を制御する場 合には、権利管理部1015は、制御信号116によっ て、情報入力部1013の情報入力機能または情報記録 機能が制御される。信号103は、情報入力部1013 を通して情報記録媒体1012に情報111として送ら れる。一方、情報記録媒体1012からの再生を制御す る場合には、権利管理部1015においては、情報記録 媒体1012に記録されている情報のうち、その情報自 身の種類や再生条件などの情報118を読み出す。それ が表示情報115として表示部1017に送って表示さ れる。

【特許請求の範囲】

【謝求項1】 情報配録媒体および権利管理手段を備 え、権利管理手段の制御により情報の記録または再生の 衝御を行なう情報記録基置から成ることを特徴とする情 報提供収集装置。

【請求項2】 上記権利管理手段においては、上記記録 媒体に記録された権利管理情報に基づいて制御を行なう ことを特徴とする請求項1に配載の情報提供収集装置。

【請求項3】 上記権利管理情報は、記録もしくは再生 前後で内容が変化することを特徴とする請求項2に記載 10 た鍵情報に基づいて行なわれることを特徴とする請求項 の情報提供収集装置。

【前求項4】 上記権利管理情報は、記録または再生が 許可される有効期限であることを特徴とする間求項2に 記載の情報提供収集装置。

【蘭求項5】 上記記録媒体に記録される情報の一部 は、その情報自身の内容を示すものであることを特徴と する請求項1に記載の情報提供収集装置。

【曽求項6】 上記記録媒体は、半導体メモリであるこ とを特徴とする諸求項1に記載の情報提供収集装置。

【簡求項7】 上記記録媒体及び上記権利管理手段は、 1枚のカードに実装されている情報記録装置から成るこ とを特徴とする請求項1に記載の情報提供収集装置。

【簡求項8】 上記記録媒体には書き換え不可能な情報 を記録し、再生時に権利管理を行なうことを特徴とする 請求項1に記載の情報提供収集装置。

【酢求項9】 上配記録媒体には、情報提供装置から書 き換え可能な情報を記録することを特徴とする請求項1 に記載の情報提供収集装置

【請求項10】 上記記録媒体への情報の記録は、上記 情報提供装置による正当性認証が成立した場合に行なわ 30 れることを特徴とする請求項9に記載の情報提供収集装

【蘭求項11】 上記正当性認証は、上記情報提供装置 及び上記情報記録装置に記録され、その値自身が暗号化 された健情報に基づいて行なわれることを特徴とする時 求項10に記載の情報提供収集装置

【簡求項12】 上記情報の再生は再生選択信号に基づ いて行なわれることを特徴とする讃求項1に記載の情報 提供权单装备。

【請求項13】 上記情報の再生は、外部からの再生選 40 択信号に基づいて行なわれることを特徴とする酵求項1 に記載の情報提供収集装置。

【簡求項14】 上記情報の再生は、上記情報提供装置 によって、上記情報記録装置の正当性認証が成立した場 合に行なわれることを特徴とする請求項13に配載の情 **朝提供収集装置。**

【請求項15】 上記正当性認証は、上記情報記録装置 及び上配情報配録装置に配録され、暗号化された鍵情報 に基づいて行なわれることを特徴とする隣求項14に記 載の情報提供収集装置。

【諸求項16】 上記権利管理情報は、権利管理情報更 新装置により書き換え可能であることを特徴とする簡求 項2に記載の情報提供収集装置。

《節求項17》 上記権利管理情報の書き換えば、上記 情報記録装置によって、上記権利管理情報更新装置の正 当性認証が成立した場合に行なわれることを特徴とする 請求項16に記載の情報提供収集装置。

【請求項18】 上記正当性認証は、上記権利管理情報 更新装置及び上記情報記録装置に記録され、暗号化され 17に配載の情報提供収集装置。

【請求項19】 上記権利管理更新装置に記録された鍵 情報と、

上配情報記録装置に配録された軽情報とは異なる値を持 つことを特徴とする請求項18に記載の情報配録装置。

【館求項20】 上記情報配録装置の挿入部と排出部を 別々に備え、上記信報記録装置への記録を行なう情報提 供装置から成ることを特徴とする情報提供収集装置。

【請求項21】 内部に配録媒体を備え、その記録媒体 に記録されている情報を上記情報再生装置に転送する情 総学供装置から成ることを特徴とする糖求項20に配載 の情報提供収集装置。

【箭求項22】 上記記録媒体として半導体メモリを用 いる情報提供装置から成ることを特徴とする請求項21 に記載の情報提供収集装置。

【蘭求項23】 上記記録媒体から上記情報記録装置へ の情報の転送を、端子を用いて行なう情報提供装置から 成ることを特徴とする請求項20に配載の情報提供収集

【朗求項24】 上記記録媒体から上記情報提供装置へ の情報の転送を非接触の手段で行なうことを特徴とする 請求項20に記載の情報提供収集装置。

【請求項25】 上記情報提供装置から転送された情報 を、上記情報記録装置に転送し、上記権利管理手段の制 御の下に上記情報の再生を行なう情報記録装置から成る ことを特徴とする情報提供収集装置。

【蘭求項26】 再生利用する情報を記録する第1の情 銀紀緑似体と、

その情報の再生利用者の入力に係わる情報を記録する第 2の情報配録媒体と、

その第2の情報配録媒体に記録された情報を外部に伝達 するための伝達手段とを備えていることを特徴とする情 報提供収集装置。

【請求項27】 上記第1の情報記録媒体に対し、外部 からの情報の書き込みが可能であることを特徴とする語 求項26に記載の情報提供収集装置。

【簡求項28】 上記情報の再生利用者の入力に係わる 情報が、第1の情報記録媒体に配録された情報再生によ って入力が促される選択情報であることを特徴とする請 50 求項26に配載の情報提供収集装置。

【請求項29】 上記情報の再生利用者の入力に係わる 情報が、その情報の再生利用状況に関する情報であるこ とを特徴とする菌求項26に配載の情報提供収集装置。

【簡求項30】 上配第1の情報記録媒体は、1Cメモ リで構成されていることを特徴とする間求項26に記載 の情報提供収集装置。

【蘭求項31】 上記第2の情報記録媒体は、1Cメモ リーで構成されていることを特徴とする請求項26に配 戯の複靱提供収集装置。

【節求項32】 構成要素が1枚のカードに実装されて 10 いる情報記録装置から成ることを特徴とする請求項26 に配載の情報提供収集装置。

【簡求項33】 上紀第2の情報記録媒体に記録された 情報を読みだす手段を備えたことを特徴とする情報提供 収集装置。

【糖求項34】 上配第2の情報配録媒体から読みださ れた情報に基づく情報を記録する媒体を装備することを 特徴とする簡求項33に記載の情報提供収集装置。

【請求項35】 上配第1の情報記録媒体への情報の客 き込み機能を装備していることを特徴とする請求項33 に記載の情報提供収集装置。

【簡求項36】 有線または無線の伝達手段を装備し、 上記第2の情報記録媒体から読み出された情報に基づく 情報を、一旦記録媒体に蓄積した後に、または蓄積をせ ずに、処理を加え、または処理を加えずに上配伝達手段 によって送信できることを特徴とする簡求項33に配載 の情報提供収集装置。

【請求項37】 上記情報記録装置の上配第2の情報記 緑媒体から読みだされた情報の種類あるいは内容に依存 して、情報提供条件あるいは情報利用条件が変化するこ 30 とを特徴とする請求項35に記載の情報提供収集装置。

【請求項38】 複数個の上配情報配録装置から、上記 伝達手段によって、上記第2の情報記録媒体から読みだ された情報に基づく情報を収集することを特徴とする情 報提供収集装置。

【発明の詳細な説明】

[0001]

【産業上の利用分野】本発明は、ニュース、音楽等の情 報を迅速に入手及び提供し、視聴者の反応を知るための 手段を備えた情報記録装置に関するものである。

[0002]

【従来の技術】従来より、例えば、特開平3-1186 90号に述べられているように、「無線、または有線に より情報送出用の制御機に接続され、情報入力手段、該 入力手段より入力した情報を情報配録媒体へ配録する記 録手段、該情報記録媒体の排出口、および決済手段から 構成されたことを特徴とする情報記録装置」という技術 が知られている。

【0003】これを用いれば、例えば、手持ちのカセッ トテープを情報記録装置にセットし、コイン、カード、 50 されている。しかし、これらは視聴のための装置が屋内

使用度数管理等の決済処理をすることにより情報記録装 **儘を介してニュース、音楽等の情報をダビングし、提供** することができる。そして、従来例では、以下の方法が 記載されている。利用者は、上記情報記録装置の挿入口 にカセットテープ等の記録媒体を挿入するとともに、コ インの投下および情報の選択を行なう。そして、上記情 報記録装置は、それらに基づいて挿入された上配情報記 鉄媒体に情報をダビングし、挿入口と同一の排出口から 上記記録媒体を排出する。

【0004】一方、流行歌などの音楽やクイズ等を供給 する媒体として、ラジオやテレビ等の放送が利用される ことが多い。

[0005]

【発明が解決しようとする課題】従来例の方法では、カ セットテープ等、ダビング速度が遅い場合には問題にな らない。ところが、例えば、半導体メモリを用いた配録 媒体へのダビングを考えた場合には、情報提供は瞬時に 行なうことが可能である。しかし、その場合に、記録媒 体へのダビングは瞬時に終了するにも拘わらず、いちい ちコイン等を使用して決済を行なうのでは、情報入手者 にコイン投入等の余分な負担がかかることになり、時間 もかかる。そのため、従来例では、例えば駅などで多く の人が情報を入手しようとしても、電車の待ち合わせ時 など、限られた時間内に情報が得られる人数には限りが できてしまうことになる。

【0006】また、従来例では、各利用者の情報選択動 作やコインの投入動作とともに、情報記録装置の記録媒 体の吸引、排出作用が隘路となり、各利用者は、これら の作用が終了するまで情報記録芸器を占有することにな る。そのため、従来例では、多くの利用者に迅速に情報 を供給することができなかった。

【0007】さらに、従来例では、上記情報記録媒体へ の紀録時に決済がなされる。ところが、例えば、紀録さ れた情報のうち、情報入手者に興味があるのは、そのほ んの一部だけで、実際にはその部分しか再生しなかった 場合がある。しかし従来例では、そうした場合でも、決 済は情報記録時に行なわれているので、情報入手者は、 すべての情報に対する料金を払わなければならないとい う不都合が生じる場合がある。

【0008】また、従来、放送局は一方的に番組を従す だけである。従って、従来例においては、視聴者が、実 際にそれらの番組をどのように視聴しているかの実態 や、どの曲に人気があるかといった情報を把握すること は困難であった。また、例えば、クイズ番組において も、従来例においては、視聴者の正当率を把握したり、 視聴者同士で正当率を競ったりすることは困難であっ た.

【0009】これに対し、双方向機能を持ったCATV を使用して、これらの情報を把握するという方法も提案 に固定されているため、屋外での視聴者の状況を知るた めには適用できない、という欠点があった。

【0010】また、一般に、正当な権利管理情報更新装 健は、 厳重に管理することが可能である。 しかし、情報 記録 (再生) 装置は多数の人が使用するため、厳重に管 理することが難しい。しかも、不当な権利管理情報更新 装置が1台でもできると、それによって多数の情報配録 (再生) 装置内の残度数が更新され得るので危険であ

【0011】本発明はこのような状況に鑑みてなされた 10 ものであり、情報の迅速な入手、柔軟な料金支払いを可 能とし、さらに、視聴者の反応に関する情報を得ること ができるようにすることを目的とする。また、情報管理 の安全性を高めることを目的とする。

[0012]

【課題を解決するための手段】 請求項1に記載の情報提 供収集装置は、情報記録媒体1043及び権利管理手段 としての権利管理部1045を備え、権利管理手段とし ての権利管理部1045の制御により情報の配録または 再生の制御を行なう情報記録装置1041から成ること 20 を特徴とする。

【0013】 蘭求項2に記載の情報提供収集装置は、上 記権利管理手段としての権利管理部1045において、 上記記録媒体1043に記録された権利管理情報として の残皮数情報Dに基づいて制御を行なうことを特徴とす

【0014】 請求項3に配載の情報提供収集装置は、上 配権利管理情報としての残度数情報Dが、配録もしくは 再生前後で内容が変化することを特徴とする。

記権利管理情報としての残度数情報Dが、配録または再 生が許可される有効期限であることを特徴とする。

[0016] 鯖求項5に配載の情報提供収集装置は、上 記記録媒体1043に記録される情報の一部が、その情 報自身の内容を示すものであることを特徴とする。

【0017】 簡求項6に記載の情報提供収集装置は、上 配記録媒体1043が、半導体メモリであることを特徴 とする。

【0018】簡求項7に記載の情報提供収集装置は、上 配配録媒体1043及び上配権利管理手段としての権利 管理部1045が、1枚のカードに実装されている情報 記録装置1041から成ることを特徴とする。

【0019】簡求項8に記載の情報提供収集装置は、上 紀記録媒体1043には密き換え不可能な情報を配録 し、再生時に権利管理を行なうことを特徴とする。

【0020】 請求項9に記載の情報提供収集装置は、上 記記録媒体1043には、情報提供装置1001から書 き換え可能な情報を配録することを特徴とする。

【0021】 菌求項10に配戦の情報提供収集装置は、 上記記録媒体1043への情報の記録が、上記情報提供 50 送する情報提供装置1001から成ることを特徴とす

装置1001による正当性認証が成立した場合に行なわ れることを特徴とする。

【0022】請求項11に記載の情報提供収集装置は、 上配正当性認証が、上配情報提供装置1001及び上記 情報記録装置1041に記録され、暗号化された鍵情報 としての秘密観Kに基づいて行なわれることを特徴とす

[0023] 請求項12に配載の情報提供収集装置は、 上記情報の再生が、再生選択信号としての再生選択情報 114に基づいて行なわれることを特徴とする。

【0024】 請求項13に配載の情報提供収集装置は、 上配情報の再生が、外部からの再生選択信号しての再生 選択情報114に基づいて行なわれることを特徴とす

【0025】 請求項14に記載の情報提供収集装置は、 上配情報の再生が、上配情報提供装置1001によっ て、上記情報記録装置1041の正当性認証が成立した 場合に行なわれることを特徴とする。

【0026】 謝求項15に記載の情報提供収集装置は、 上記正当性認証が、上記情報提供装置1001及び上記 情報記録装置1041に記録され、暗号化された軽情報 としての秘密鍵Kに基づいて行なわれることを特徴とす ۵.

【0027】蘭求項16に記載の情報提供収集装置は、 上記権利管理情報としての残度数情報Dが、権利管理情 報更新装置1061により書き換え可能であることを特 樹とする。

[0028] 諸求項17に配載の情報提供収集装置は、 上記権利管理情報としての残度数情報Dの書き換えが、 【0015】請求項4に記載の情報提供収集装置は、上 30 上記情報記録装置1041によって、上記権利管理情報 更新装置1061の正当性認証が成立した場合に行なわ れることを特徴とする。

> 【0029】 簡求項18に記載の情報提供収集装置は、 上記正当性認証が、上記権利管理情報更新装置1061 及び上記情報記録装置1041に記録され、暗号化され、 た鍵情報としての復号化鍵L及び暗号化鍵Mに基づいて 行なわれることを特徴とする。

【0030】 請求項19に記載の情報提供収集装置は、 上記権利管理更新装置1061に配録された鍵情報とし ての暗号化鍵Mと、上記情報記録装置1041に記録さ れた盤情報としての復号化鍵しとは異なる値を持つこと を特徴とする。

【0031】請求項20に配載の情報提供収集装置は、 上記情報記録装置1041の挿入部と排出部を別々に備 え、上記情報記録装置1041への記録を行なう情報提 供装置1001から成ることを特徴とする。

【0032】請求項21に記載の情報提供収集装置は、 内部に記録媒体2012を備え、その記録媒体2012 に記録されている情報を上記情報記録装置1041に転 る.

【0033】 菌水項22に記載の情報提供収集装置は、 上記記録媒体2012として半導体メモリを用いる情報 提供装置1001から成ることを特徴とする。

【0034】 館求項23に記載の情報提供収集装置は、 上記記録媒体2012から上記情報記録装置1041へ の情報の転送を給子2041を用いて行なうことを特徴 とする。

【0035】 請求項24に記載の情報提供収集装置は、 記録媒体2023から情報記録装置2031への情報の 10 転送を非接触の手段で行なうことを特徴とする。

【0036】 請求項25 に配載の情報提供収集装置は、 上配情報提供装置1001から転送された情報を、上配 情報配線装置1041に転送し、上記権利管理手段とし ての権利管理部1045の制御の下に上記情報の再生を 行なう情報配録装置1041から成ることを特徴とする。

【0037】 防求項26に配載の情報提供収集装置は、 再生利用する情報を記録する第1の情報記録媒体401 3と、その情報の再生利用者の入力に係わる情報を記録 20 する第2の情報記録媒体4017と、その第2の情報記録媒体4017に配録された情報を外部に伝達するため の伝達手段としての伝達部3008とを備えていること を特徴とする。

【0038】 請求項27に記載の情報提供収集装置は、 上記第1の情報記録媒体4013に対し、外部からの情報の書き込みが可能であることを特徴とする。

【0039】 防求項28に記載の情報提供収集装置は、 上配情報の再生利用者の入力に係わる情報が、第1の情 報記録媒体4013に記録された情報再生によって入力 30 が促される選択情報であることを特徴とする。

【0040】 請求項29に配載の情報提供収集装置は、 上配情報の再生利用者の入力に係わるその情報が、その 情報の再生利用状況に関する情報であることを特徴とする

【0041】 簡求項30に配載の情報提供収集装置は、 上配第1の情報記録媒体4013が、1Cメモリで構成 されていることを特徴とする。

【0042】請求項31に記載の情報提供収集装置は、 該第2の情報記録媒体4017が、1Cメモリで構成さ 40 れていることを特徴とする。

【0043】 簡求項32に配載の情報提供収集装置は、 構成要素が1枚のカードに実装されている情報配録装置 5021から成ることを特徴とする。

【0044】 請求項33に記載の情報提供収集装置は、 上配第2の情報記録媒体4017に配録された情報を読み出す手段としての制御部4014を備えたことを特徴とする。

【0045】請求項34に記載の情報提供収集装置は、 枚のカードに実装されている情報配録装置1041から 上記第2の情報記録媒体4017から読みだされた情報 50 成る。以上のことにより、情報の迅速な入手が可能とな

に基づく情報を記録する媒体としての記録媒体3007 を装備することを特徴とする。

【0046】 簡求項35に記載の情報提供収集装置は、 上記第1の情報記録媒体4013への情報の書き込み機能を装備していることを特徴とする。

【0047】 関求項36に記載の情報提供収集装置は、 有線または無線の伝達手段としての伝達部3002,3 008を装備し、上配第2の情報配録媒体4017から 読み出された情報に基づく情報を、一旦記録媒体300 7に替積した後に、または替積をせずに、処理を加え、 または処理を加えずに上配伝達手段によって送信できる ことを特徴とする。

【0048】 請求項37に記載の情報提供収集装置は、 上記第2の情報記録媒体4017から読みだされた情報 の種類あるいは内容に依存して、情報提供条件あるいは 情報利用条件が変化することを特徴とする。

【0049】 請求項38に記載の情報提供収集装置は、 複数個の上配記情報記録装置5021から、上配伝達部 3008によって、上配第2の情報記録媒体3007か ら読みだされた情報に基づく情報を収集することを特徴 とする。

[0050]

【0051】請求項2に記載の情報提供収集装置においては、権利管理部1045において、上記記録媒体1043に記録された残度数情報Dに基づいて制御が行なわれる。以上のことにより、柔軟な料金支払いが可能となる。

【0052】 簡求項3 に記載の情報提供収集装置においては、残度数情報 Dが、配録もしくは再生前後で内容が変化する。以上のことにより、柔軟な料金支払いが可能となる。

【0053】 蘭求項4に配載の情報提供収集装置においては、残度数情報Dが、配録または再生が許可される有効期限である。以上のことにより、柔軟な料金支払いが可能となる。

【0054】 離求項5に記載の情報提供収集装置においては、記録媒体1043に記録される情報の一部が、その情報自身の内容を示す。以上のことにより、柔軟な料金支払いが可能となる。

【0055】 請求項6に記載の情報提供収集装置においては、記録媒体1043が、半導体メモリである。以上のことにより、情報の迅速な入手が可能となる。

【0056】 請求項7に配載の情報提供収集装置においては、記録媒体1043及び権利管理部1045が、1 枚のカードに実装されている情報配録装置1041から成る。以上のことにより、情報の迅速な入手が可能とな ъ.

【0057】崩求項8に記載の情報提供収集装置においては、記録媒体1043には巻き換え不可能な情報が記録され、再生時に権利管理が行なわれる。以上のことにより、柔軟な料金支払いが可能となる。

【0058】 関求項9に配載の情報提供収集装置においては、記録媒体1043に、情報提供装置1001から 番き換え可能な情報が記録される。以上のことにより、 柔軟な料金支払いが可能となる。

【0059】 請求項10に記載の情報提供収集装置にお 10 いては、記録媒体1043への情報の記録が、上記情報 提供装置1001による正当性認証が成立した場合に行なわれる。以上のことにより、情報管理の安全性が高められる。

【0060】 請求項11に記載の情報提供収集装置においては、上配正当性認証が、情報提供装置1001及び情報記録装置1041に配録され、秘密鍵Kに基づいて行なわれる。以上のことにより、情報管理の安全性が高められる。

【0061】 請求項12に記載の情報提供収集装置にお 20 いては、上記情報の再生が、再生選択信号114に基づいて行なわれる。以上のことにより、柔軟な料金支払いが可能となる。

【0062】 酵求項13に記載の情報提供収集装置においては、上記情報の再生が、外部からの再生選択信号114に基づいて行なわれる。以上のことにより、柔軟な料金支払いが可能となる。

【0063】 朗求項14に配載の情報提供収集装置においては、上記情報の再生が、情報提供装置101によって、情報記録装置1041の正当性認証が成立した場 30合に行なわれる。以上のことにより、情報管理の安全性が高められる。

【0064】 蘭求項15に配載の情報提供収集装置においては、上記正当性認証が、情報提供装置1011及び情報記録装置1041に記録され、秘密離Kに基づいて行なわれる。以上のことにより、情報管理の安全性が高められる。

【0065】 請求項16に配載の情報提供収集装置においては、残度数情報Dが、権利管理情報更新装置106 1により書き換え可能である。以上のことにより、柔軟 40な料金支払いが可能となる。

【0066】 請求項17に記載の情報提供収集装置においては、残度数情報Dの書き換えが、情報配録装置1041によって、権利管理情報更新装置1061の正当性認証が成立した場合に行なわれる。以上のことにより、情報管理の安全性が高められる。

【0067】 請求項18に配載の情報提供収集装置においては、上記正当性認証が、権利管理情報更新装置1061及び情報記録装置1041に記録され、復号化難し及び暗号化離Mに基づいて行なわれる。以上のことによ 50

り、情報管理の安全性が高められる。

【0068】請求項19に配載の情報提供収集装置においては、権利管理更新装置1061に記録された暗号化鍵Mと、情報記録装置1041に記録された復号化鍵Lとは異なる値を持つ。以上のことにより、情報管理の安全性が高められる。

【0069】 請求項20に記載の情報提供収集装置においては、情報記録装置1041の挿入部と排出部を別々に備え、情報記録装置1041への記録を行なう情報提供装置1001から成る。以上のことにより、情報の迅速な入手が可能となる。

【0070】 請求項21に配載の情報提供収集装置においては、内部に配録媒体2012を備え、その配録媒体2012に配録されている情報を情報配録装置1041に転送する情報提供装置1001から成る。以上のことにより、情報の迅速な入手が可能となる。

【0071】 簡求項22に記載の情報提供収集装置においては、記録媒体2012として半導体メモリを用いる情報提供装置1001から成る。以上のことにより、情報の迅速な入手が可能となる。

【0072】簡求項23に記載の情報提供収集装置においては、記録媒体2012から情報記録装置1041への情報の転送が端子2041を用いて行なわれる。以上のことにより、情報の迅速な入手が可能となる。

【0073】 簡求項24に記載の情報提供収集装置においては、記録媒体2023から情報記録装置2031への情報の転送が非接触の手段で行なわれる。以上のことにより、情報の迅速な入手が可能となる。

【0074】 前求項25 に記載の情報提供収集装置においては、情報提供装置1001から転送された情報を、情報記録装置1041に転送し、権利管理部1045の制御の下に上記情報の再生を行なう情報記録装置1041から成る。以上のことにより、柔軟な料金支払いが可能となる。

【0075】 簡求項26に記載の情報提供収集装置においては、情報記録媒体4013により、再生利用する情報が記録され、情報記録媒体4017により、再生利用者の入力に係わる情報が記録される。そして、伝達部3008により、情報記録媒体4017に記録された情報が外部に伝達される。以上のことにより、柔軟な料金支払いが可能となる。

【0076】簡求項27に配載の情報提供収集装置においては、情報記録媒体4013に対し、外部からの情報の告き込みが可能である。以上のことにより、柔軟な料金支払いが可能となる。

[0077] 請求項28に配載の情報提供収集装置においては、再生利用者の入力に係わる情報が、情報記録媒体4013に記録された情報再生によって入力が促される選択情報である。以上のことにより、視聴者の反応に関する情報が得られる。

【0078】簡求項29に配載の悋報提供収集装置においては、再生利用者の入力に係わるその情報が、その情報の再生利用状況に関する情報である。以上のことにより、視聴者の反応に関する情報が得られる。

【0079】 請求項30に記載の情報提供収集装置においては、情報記録媒体4013が、1Cメモリで構成されている。以上のことにより、情報の迅速な入手が可能となる。

【0080】 請求項31に記載の情報提供収集装置においては、情報記録媒体4017が、1Cメモリーで構成 10されている。以上のことにより、情報の迅速な入手が可能となる。

【0081】 開求項32に配載の情報提供収集装置においては、構成要案が1枚のカードに実装されている情報 記録装置5021から成る。以上のことにより、情報の 迅速な入手が可能となる。

【0082】 請求項33に記載の情報提供収集装置においては、情報記録媒体4017に記録された情報が、制御部4014により読み出される。以上のことにより、視聴者の反応に関する情報が得られる。

【0083】 関求項34に配載の情報提供収集装置においては、記録媒体3007により、情報記録媒体4017から読みだされた情報に基づく情報が記録される。以上のことにより、視聴者の反応に関する情報が得られる。

【0084】 蘭求項35に記載の情報提供収集装置においては、情報記録媒体4013への情報の審き込み機能が装備されている。以上のことにより、柔軟な料金支払いが可能となる。

【0085】 簡求項36に記載の情報提供収集装置にお 30 いては、情報記録媒体4017から読み出された情報に基づく情報が、一旦記録媒体3007に蓄積された後に、伝達部3002、3008により送信される。または、上記情報が蓄積されずに、処理が加えられ、または処理が加えられずに伝達部3002、3008により送信される。以上のことにより、柔軟な料金支払いが可能となる。

【0086】 請求項37に記載の情報提供収集装置においては、情報記録媒体4017から読みだされた情報の種類あるいは内容に依存して、情報提供条件あるいは情 40報利用条件が変化する。以上のことにより、柔軟な料金支払いが可能となる。

【0087】 請求項38に記載の情報提供収集装置においては、複数個の配情報記録装置5021から、伝達部3008によって、情報記録媒体3007から読みだされた情報に基づく情報が収集される。以上のことにより、視聴者の反応に関する情報が得られる。

[0088]

【実施例】以下、本発明の好ましい実施例について、図 ては、有線または無線による情報伝達手段によって送信面を参照しながら説明する。図1は、本発明の方法によ 50 するようにすると便利である。ただし、もちろん、記録

る情報提供収集装置の一実施例における情報記録再生装置の外観を示したものである。この実施例の装置の一端には、情報提供装置結合端子が付いている。ここを通じて、情報提供装置から情報記録再生装置内に設置された記録媒体に情報がコピーされる。また、この実施例の装置の前面には、表示手段としての表示部と、再生選択手段としての再生選択ボタンが装備されている。

12

【0089】次に、その動作について説明する。上記表 示部は、上記情報記録再生装置内に記録された情報の内 **幹を表示することができる。情報提供収集装置の使用者** は、上記表示部に表示されたものをもとに、ボタン等の 再生選択手段を用いて必要な情報を選択的に再生するこ とができる。情報の内容は、テキスト情報、音声情報、 映像情報およびコンピュータブログラム等を含み、特に 限定されない。 ここでプログラムの再生とは、そのプロ グラムを実行することを意味するが、この場合、実行時 に使用者が必要に応じて情報を入力しても良い。再生信 号がテキストや映像信号の場合には、その再生信号は被 晶装置等でできた表示部に表示され、音声情報の場合に 20 はイアホンに出力される。図1の実施例には描かれてい ないが、もちろんイアホンのかわりに、スピーカが装備 されていても良く、あるいは、その両方が装備されてい ても良い。その場合には、スピーカに音声情報の再生結 果が出力されても良い。

【0090】やはり図1の実施例には盛かれていないが、さらに再生信号は、外部端子が設けられて外部のCRTやスピーカー等に接続されてもよい。なお、配録媒体の種類も、特に限定はない。しかし、一般的に、記録媒体は、高速にコピーが可能で、かつ、ランダムアクセスが容易で、携帯性にも優れたICメモリが使用されると便利である。

【0091】図2は、本発明のもう1つの実施例の外観図である。この例では、図1の情報配録再生装置が、情報記録装置と情報再生装置とに物理的に分離して構成されている。そして、情報記録装置は1枚のカードに実装されている。ただし、再生時には、上記情報記録装置と上記情報再生装置との間でデータおよび制御のやりとりが必要になるので、両者を結合する情報提供装置結合場子及び情報再生装置結合場子が上記情報記録装置及び上記情報再生装置に装備されている。ただし、上記情報記録装置の上記情報配録装置結合場子及び上記情報再生装置結合場子は、実際には1つの場子を切り替えて使用されるように構成されることも可能である。その動作については、図1と同様であり、ここでは省略する。

【0092】図3は、本発明に係わる情報提供収集装置の一実施例における情報提供装置の外観図である。情報提供装置内には記録媒体が設置され、情報が記録されている。図3では省略されているが、記録する情報においては、有線または無線による情報伝達手段によって送信するようにすると便利である。ただし、もちろん、記録

済みの配録媒体が直接に上配情報提供装置に挿入されて も良い。

【0093】図3の実施例の情報提供装置の前面には、記録されている情報の内容や価格等を表示する表示手段としての表示部が装備されている。また、上記情報提供装置の前面には、どの情報を情報提供手段から出力するかを選択する出力選択手段としての出力選択ボタンが装備されている。そして、その出力選択ボタンにより、情報入手希望者は欲しい情報を選択することができる。さらに、上記情報提供装置の前面には、情報記録再生装置 10または情報記録装置を挿入するための挿入排出口が備えてある。その動作について説明する。情報の入手は、上記情報提供装置の挿入排出口に情報記録表には情報記録表には情報記録表によれ、情報のコピーを受けることによって実現される。

【0094】図4は、本発明に係わる情報提供収集装置のもう1つの実施例における情報提供装置の外観図である。この実施例では、挿入口と排出口が距離を置いて分配されている。そして、情報提供装置内には、情報記録装置を選ぶベルトが働えてある。その動作について説明 20 する。上記押入口から情報記録装置が挿入されると、その情報記録装置は上記ベルトに運ばれて排出口から出てくる。そして、情報入手希望者は歩きながら情報の入手をすることができる。以上のように、この実施例は多くの人に迅速に情報を提供する場合に便利である。

【0095】図5は、本発明の情報提供収集装置の一実施例における情報提供装置のブロック図である。図5において、情報記録媒体1003は、ハードディスクや光磁気ディスク等、何であっても良い。しかし、一般的には、ランダムアクセスが可能で、情報記録再生装置の記 30 録速度と同等の読み出しが可能であると効率が良い。そのため、記録媒体1003は、ICメモリによって構成されていると便利である。情報記録媒体1003は、情報出力部1004は、制理部1005に接続されている。制御部1005には、出力選択部1006及び表示部1007に接続されている。そして、以上の構成により、情報提供装置1001を成している。一方、情報記録媒体1003は情報伝達部1002にも接続されている。

【0096】次に、その動作について既明する。情報1 40 01が、有線、無線等の情報伝達部1002によって送られ、情報記録媒体1003に記録される。その情報記録媒体1003とした情報102は、情報出力部1004を通して信号103として出力される。情報出力部1004は網署部1005により情報の出力制御を受ける。制御部1005は、表示部1007に情報の内容や提供条件、情報提供処理過程の経過等の信号105を送る。それと共に、制御部1005は、情報入手希望者が出力選択部1006を通じて入力した出力選択情報104を受け取る。そして、制御部1005は、図 50

6に示す情報記録再生装置1011の権利管理部1015と検述する内容の通信107を行なう。その結果に基づいて、信号106により情報出力部1004の制御が行なわれる。その制御に基づいて、情報出力部1004は、情報記録媒体1003から読みだした情報102を情報記録再生装置1011に信号103として出力する。

[0097] 図6は、本発明の情報提供収集装置の一実施例における情報記録再生装置のプロック図である。図6において、情報記録媒体1012は、情報入力部10、13、権利管理部1015及び情報再生部1014に接続されている。そして、情報再生部1014及び情報入力部1013は、権利管理部1015には、再生選択部1016及び表示部1017が接続されている。そして、以上の構成により、情報記録再生装置1011を成している。

【0098】次に、その動作について説明する。情報配録再生装置1011においては、権利管理部1015の制御の下に、情報記録再生装置1011への入力、情報記録媒件1012への記録なび再生が行なわれる。情報入力部1013への入力または情報記録媒件1012への記録を制御する場合には、権利管理部1015は、図5に示す情報提供装置1001の新興部1005と、後述する内容の通信107を行なう。その結果に基づいて、制御信号116によって、情報入力部1013の情報入力機能または情報記録機能が制御される。そして、信号103は、情報入力部1013を通して情報記録媒体1012に情報111として送られる。

【0099】一方、情報記録媒体1012からの再生を 飼御する場合には、権利管理部1015においては、情 報記録媒体1012に記録されている情報のうち、その 情報自身の種類や再生条件などの情報118を読み出 す。それが表示情報115として表示部1017に送っ て表示される。この表示情報115に基づいて、装置の 使用者が再生選択係1016によって入力した再生選択 信号としての再生選択情報114が、権利管理部101 5に送られる。そして、権利管理部1015において は、後述する処理を行なうことによって、情報再生部1 014に再生制御信号117を送る。これに基づいて、 情報再生部1014においては、情報記録媒体1012 から情報112を読み出し、音や映像、テキストなどの 再生信号113を出力する。ただし、再生信号113が 映像やテキストである場合には、例えば、その映像やテ キストが表示部1017上に再生されても良い。

【0100】図7は、図5に示す情報提供装置1001における制制部1005の実施例を示したものである。図7において、メモリ1021は、CPU1022に接続され、CPU1022は、私数発生部1023に接続されている。以上のように、制御部1005は、メモリ

1021とCPU1022及び乱数発生部1023で構成されている。そして、メモリ1021には、暗号化された秘密鍵Kが配録されている。その動作については、 後のフローチャートで述べる。

【0101】図8は、図6に示す情報記録再生装置10 は、コピー要求信号203を11における権利管理部1015の実施例を示したものである。図8において、メモリ1031は、CPU10 情報記録再生装置1011に32に接続されている。そして、権利管理部1015は、メモリ1031及びCPU1032で構成されている。また、メモリ1031には、暗号化された鍵情報としての秘密鍵K及び権利管理情報としての残度数情報D が記録されている。 は、コピー要求信号203をは、情報記録再生装置1011に対象に表述されている。 は、ステップ が記録されている。 は、コピー要求信号203をは、コピー要求信号203をは、コピー要求信号203をは、コピー要求信号203をは、コピー要求信号203をは、コピー要求信号203をは、コピー要求信号203をは、コピー要求信号203をは、コピー要求信号203をは、コピー要求信号203をは、コピー要求信号203をは、コピー要求信号203をは、コピー要求信号203をは、コピー要求信号203をは、コピー要求信号203をは、コピー要求信号203をは、情報記録は、1011における権利を表述して、情報記録は、コピー要求信号203をは、情報記録は、1011における権利を表述されている。

【0102】ここで残度数情報Dとは、情報記録再生装置1011が、その時点で、あと何回外部から情報を入手して記録してもいいか、あるいは、何回その情報を再生してもいいか、という権利情報を表すものである。ただし、残度数情報Dは、それら記録または再生の回数を直接表すものでなくても良い。例えば、残度数情報Dは、その情報を記録または再生するのに必要な権利の単位の数量を表し、情報の内容によって異なる数量の単位が記録または再生時に減じられていくものとしても良い。また、残度数というのも権利管理情報の一例であり、例えば、残度数のかわりに、記録や再生の許される有効期限が記録してあってもよい。その動作については、後のフローチャートで述べる。

【0103】図9は、本発明の情報提供収集装置の一実施例において、情報記録再生装置への記録時に決済が行なわれる場合ついて説明するフローチャートである。ここで図9において、情報提供装置1011及び情報記録再生装置1011間の通信107及び情報の送受信信号 30113の実施例について説明を行なう。

【0104】先ずステップ1で、情報の入手希望者は、情報記録再生接置1011を情報提供装置1001に挿入し、出力選択部1006を用いて出力選択を行なう。ステップ2で、制御部1005は、この出力選択情報104を受信する。それと共に、ステップ10で、制御部1005と権利管理部1015との間で通信201が行なわれる。そして、後述する方法により、権利管理部1015の配配が行なわれる。ステップ3で、これにより権利管理部1015の正当性が証明されれば、ステップ405で、その情報の入手に必要な度数202が権利管理部1015に送信される。しかし、ステップ3で、もし正当性が証明されない場合には、ステップ4が実行される。ステップ4では、正当性が証明されないことが表示部1007に表示され、情報記録再生装置1011が排出されるなどのコピー不可処理1が行なわれる。

【0105】一方、ステップ5で、その正当性が証明された権利管理部1015は、ステップ11で、情報の入手に必要な度数情報を受信する。ステップ12では、権利管理部1015は、上記必要度数情報と権利管理部1 50

015自身が保持する残度数情報Dとを比較する。そして、もし必要度数が残度数よりも等しいか、少なければ、ステップ13で、コピー要求信号203が制御部1005は、コピー要求信号203を受信する。ステップ7では、情報配録媒体1003内の情報が情報103として情報配録再生装置1011に送信される。そして、ステップ14で、情報配録再生装置1011は、情報103を受信し記録する。それと共に、ステップ15で、残度

16

【0106】一方、ステップ12で、必要度数が残度数より大きい場合には、ステップ16で、権利管理部1015はコピー不可処理2要求信号205を送信する。ステップ8では、制御部1005はコピー不可処理2要求信号205を受信する。そして、ステップ9で、コピー不可であることが表示部1007に表示されるなどのコピー不可処理2が行なわれる。このようにして、情報送信が行なわれたり、必要度数が残度数より大きいためにコピー不可処理2が行なわれる。

7 【0107】ところで、以上の処理後、情報入手希望者が別の情報の入手を希望する場合がある。その場合は、情報配録媒体1012に十分な配録領域が確保できるのであれば、情報入手希望者が、別の情報の入手を希望することを情報記録装置に入力する。そして、情報提供装置1001及び情報配録再生装置1011は上述の処理を繰り返すようにしても良い。なお、権利管理情報として、残度数のかわりに有効期限が記録されている場合も考えられる。その場合には、権利管理部1015は、必要度数と残度数との比較ではなく、図では省略されているクロックに基づいて、現在の日付時刻と有効期限との比較を行なう。そして、残度数の変更にあたるような処理は不用になる。

[0108] 図10は、図9に示す認証のための通信201について説明するフローチャートである。先ず、ステップ31で、制御部1005は乱数Pを発生する。ステップ32で、上記乱数Pが権利管理部1015に送信される。それと共に、ステップ33で、秘密観Kと乱数Pに依存する関数f(K, P)の値Aが計算される。

【0109】一方、ステップ36で、権利管理部1015は乱数Pを受信する。そして、ステップ37でも、関数f(K,P)の値Bが計算される。ステップ38で、上配値Bが制御部1005は、位Aと値Bとを比較する。ステップ35で、値Aと値Bとが、もし一致していれば、この権利管理部1015は正しい秘密健Kの値を保持し、正しい決済を行なう正当なものであると判断される。しかし、値Aと値Bとが、もし一致しなければ、この権利管理部1015は不当なものであると見なされる。

【0110】ここで、認証の方法としては、例えば、権

利管理部1015が保持している秘密鍵Kを直接、制御部1005に送留し、制御部1005が正しい秘密鍵Kの値が送られてきたかを検証するという方法も採ることができる。しかし、実施例のような方法が用いられれば、秘密製Kが、制御部1005や権利管理部1015の外部に出ることはないので、安全性が高められる。また、認証の方法としては、後述する公開鍵暗号を利用した方法を用いることももちろん、可能である。

【0111】図11は、本発明の情報提供収集装置の一 実施例において、権利管理部1015が情報の配録時で 10 はなく、再生時に情報使用の抉済を行なう場合の処理の 流れのについて説明するフローチャートである。ステッ ブ51で、情報記録媒体1012に記録されている情報 のうち、どの部分を再生するか再生選択がなされる。ステップ52で、権利管理部1015においては、残度数 が再生に必要な度数以上であるかどうかを調べ、もしそ うであれば、ステップ54が実行される。そして、情報 が再生されると共に、ステップ55で、残度数が減ずる ように変更される。一方、ステップ52で、残度数が必 変度数に横たない場合には、ステップ53で、残度数が 必要度数に満たないことが表示部1017に表示される などの再生不可処理が行なわれる。

【0112】なお、残度数のかわりに有効期限が記録されている場合も考えられる。その場合には、権利管理部1015おいては、必要度数と残度数との比較ではなく、図では省略されているクロックに基づいて、現在の日付時刻と有効期限との比較を行なう。そして、この場合には、残度数の変更にあたるような処理は不用になる。なお、このように再生時に権利管理が行なわれる場合、記録媒体への書き込みは必ずしも情報提供装置を通30じて行なわれなくても良い。例えば、マスクROMに記録されている情報が上述の方法で再生時に決済されるようにしても良い。

【0113】図12は、図2の実施例における情報記録 再生装置の構成を示すプロック図である。図12におい て、情報記録再生装置は、情報記録装置1041と情報 再生装置1051とに分離している。権利管理部104 5は、情報入力部1044及び情報出力部1042とに 接続され、情報入力部1044は、情報記録媒体104 3に接続されている。また、情報記録媒体1043は、 情報出力部1042に接続されている。以上の構成によ り、情報配録装置1041を成している。

【0114】一方、情報再生郎1052は、再生制御部1053に接続され、再生制御部1053は、再生選択部1054及び表示部1055に接続されている。以上の構成により、情報再生装留1051を成している。そして、情報出力部1042は、情報再生装置1051に接続され、権利管理部1045は、再生制御部1053に接続されている。図1の実施例の場合と対応する部分には同一の符号を付してあり、その説明は適宜省略す50

18 る。なお、情報記録装置1041は、1枚のカードに実 装されている。

【0115】 次に、その動作について説明する。図12の場合には、図6に示す権利管理部1015の機能は、権利管理部1045と再生制御部1053に分解されている。情報配録媒体1043に情報が記録される時に、その情報の権利管理が行なわれる場合には、権利管理部1045は図6の権利管理部1015と同様に機能する。一方、情報記録媒体1043からの再生時に権利管理が行なわれる場合には、権利管理部1045及び再生制御部1053が、それら両者間の通信120を通じて、図6の権利管理部1015と同様の機能を果たす。

【0116] 尚、この場合、権利管理部1045は、情報出力部1042の出力を制御信号121によって制御する。そのことにより、情報の再生が許可されたり禁止されたりする。もちろん、情報配録媒体1043からの出力そのものが制御されることによっても、同様の機能を実現することは可能である。尚、不当な情報再生装置によって情報が再生されることを防ぐため、例えば、再生選択の前に、情報配録装置1041による情報再生装置1051の認証が行なわれるようにしても良い。

【0117】本発明において、残皮数などの権利管理情報は、重要な役割を持つ。そして、上記権利管理情報は、正当な権利管理情報更新装置を用いて、安全かつ容易に更新することが可能である。以下、これについて説明を行なう。

【0118】図13は、権利管理情報更新装置の実施例の外観を示したものである。権利管理情報更新装置の前面には、情報配録(再生)装置を出し入れする挿入排出口及びコイン投入口がついている。その動作について説明する。権利管理情報の更新が必要な場合には、情報配録(再生)装置が挿入排出口に挿入されると共に、コイン投入口に必要な対価が入れられる。ただしもちろん、権利管理情報更新装置が人手によって管理され、その人が更新希望者から対価を受け取って、情報記録(再生)装置を挿入排出口に挿入するようにしても良い。

【0119】図14は、図13の実施例において、権利 管理部1015及び権利管理情報更新装置1061の構 成を示すプロック図である。ただし、権利管理情報の更 40 新に直接関係しない部分については省略してある。図1 4において、権利管理部1015には、図8に示された 他に乱数発生部1033が装備されており、また、メモ リ1031には、暗号化された解情報としての復号化鍵 し及び残度気情報Dが記録されているものとする。この 復号化鍵Lの意味と働きについては後述する。そして、 乱数発生部1033及びメモリ1031は、CPU10 32に接続されている。また一方、権利管理情報更新装 留1061には、メモリ1062、CPU1063及び コイン受入部1064が装備されている。そして、メモ 50 り1062には、暗号化館Mが記録されているものとす る。この暗号化離Mは前述の復号化離Lと対になるものであるが、その意味と働きについては接述する。メモリ1062及びコイン受入部1064はCPU1063に接続されている。そして、CPU1032とCPU1063とが、通信301を行なうことによって、権利管理情報の更新は行なわれる。

【0120】図15は、図13の実施例において、権利管理部1015及び権利管理情報更新装置1061の処理のフローチャートを示したものである。権利管理情報更新装置1061に権利管理部1015によって権利管理情報更新装置1061の認証302が始まる。認証の結果、ステップ62で、権利管理情報更新装置1061が正当なものであると認められれば、ステップ63で、残度数更新のための処理が準備される。しかし、ステップ62で、正当であると認められなければ、残度数更新拒否処理が行なわれる。ここで、残度数更新拒否処理は単に何もしないだけでも良いが、権利管理情報更新装置1061にその残度数更新拒否をすることが送信されても良い。

【0121】次に、残度数更新の処理として、ステップ65で、認証が開始された後、ステップ66で、権利管理情報更新装置1061はコインの投入を確認する。ステップ67で、入金された領303が権利管理部1015に送信される。ステップ63で、権利管理部1015が上配額303を受信し、ステップ64で、その額に応じて残度数が増加するように変更される。一方、権利管理情報更新装置は排出口から情報記録(再生)装置を排出する。

【0122】図16は、図13の実施例において、認証 30の処理の流れを示したものである。認証の方法としては、例えば、図10に示したものと同じように権利管理部1015と権利管理情報更新装置1061とで共通の秘密鍵を用いて行なうこともできる。しかし、そのような方法をとった場合、万が一、権利管理部1015に記録されている秘密鍵の情報が漏洩すると、不当な権利管理情報更新装置の制作が可能になる。

【0123】一般に、正当な権利管理情報更新装置は、 厳重に管理することが可能である。しかし、情報記録 (再生)装置は多数の人が使用するため、厳重に管理す 40 ることが難しい。しかも、不当な権利管理情報更新装置 が1台でもできると、それによって多数の情報記録(再 生)装置内の残度数が更新され得るので危険である。そ のため、この実施例では、公開鍵暗号を用いた認証を利 用している。

【0124】公開駿暗号ついては、例えば Cryptographyand Data Secu rity, Dorothy Elizabety Ro bling Denning, 1982 Addiso

(日本語訳)

暗号とデータセキュリティ

上國忠弘、小條格、奥島晶子駅 培風舘

に詳細が記述されている。この技術を使うと、情報の暗号化時に使われる暗号化鍵と、暗号化情報の復号化時に使用される復号化鍵とが別なものに設定できる。しかも、復号化鍵が知られても、それから暗号化鍵を知ることは極めて困難なものにすることができ、安全性が高まる

【0125】以下、図16に示された認証のための処理 手順について述べる。まず、ステップ81で、権利管理 部1015は乱数Qを発生する。ステップ82で、乱数 Qが権利管理情報更新装置1061に送信される。それ と共に、ステップ86で、権利管理情報更新装置106 1が乱数Qを受信する。ステップ87で、権利管理情報 更新装置1061は、暗号化鍵Mと乱数Qとに依存する 関数 e (M, Q) の値Rを計算する (暗号化) . ステッ 20 ブ88で、値Rが権利管理部1015に送信されると共 に、ステップ83で、値Rが権利管理部1015に受信 される。ステップ84で、権利管理部1015は、復号 化難Lと値Rとに依存する関数d(L、R)の値Sを計 算する(復号化)、ステップ85で、値Sが乱数Qと一 致するかどうか調べられる。そして、値Sと乱数Qとが もし一致しているのであれば、権利管理情報更新装置1 061は正当なものであると判断される。しかし、値S と乱数Qとが一致しなければ、権利管理情報更新装置1 061は不当なものであると判断される。

【0126】以上のように、本発明では、情報をコピーする側の情報提供装置ではなく、情報記録媒体と一体となった情報記録(再生)装置の側が決済等の権利管理を行なう機能を持つ。そのことにより、情報記録媒体への記録時だけでなく再生時の決済が可能になる。それと共に、記録時の決済の場合にも、情報入手者に余分な負担がかからないことが可能である。また、本発明による方法では、情報記録装置への記録媒体の挿入口と銀出口とが分離している。それで、各利用者は挿入口に記録媒体を挿入した後、排出口へと移動することにより、多数の利用者が次々と情報記録装置を利用することが可能となる。そして、暗号化鍵を知ることは極めて困難なものにすることができ、安全性が高まる。

【0127】図17は図4の情報提供装置の内部の構成 例を示したものである。図17において、挿入口200 2と俳出口2003とが情報転送部2001を介してベルト2004により連絡されている。

【0128】 次に、その動作について説明する。 挿入口 2002から挿入された情報記録装置は、ベルト200 4によって、情報転送部2001に送られる。そして、 情報転送部2001では、上記情報記録装置内の記録媒 体に情報が配録される。その後、上記情報記録装置は、 ペルト2004によって排出口2003へと運ばれ排出 される。もちろん、ベルト2004のかわりに、例え は、高圧の空気によって上配情報配録装置が移動されて

【0129】図18は情報転送部2001の内部構成を 示したものである。図18において、情報記録媒体20 12は、例えば、半導体メモリ等で構成されている。 制 御部2011は、記録部2013及び情報記録媒体20 12に接続されている。そして、情報記録媒体2012 10 と記録部2013とは接続されている。さらに、記録部 2013には端子2014が接続されている。

【0130】次に、その動作について説明する。情報記 緑媒体2012に配録されている情報402は、制御部 2011からの制御信号401に基づいて記録部201 3へと送られる。さらに、記録部2013から出力され た情報404が、端子2014を通じて情報配録装置の 始子に送られる。この情報404は、制御信号403に 基づいた記録部2013の作用によって情報記録装置内 の情報記録媒体に記録される。

【0131】図19は、情報転送部のもう1つの内部構 成例を示したものである。この例では、情報転送は非接 触の方法で行なわれる。情報転送部2021は、制御部 2022と情報記録媒体2023及び送信部2024と で構成されている。制御部2022は、送信部2024 及び情報記録媒体2023に接続されている。そして、 情報記録媒体2023と送信部2024とは接続されて いる。さらに、送信部2024は電磁波などの方法によ り、情報記録装置2031内の受信部2032と連絡さ れている。また、情報記録装置2031は、受信部20 30 32と記録部2033及び情報記録媒体2034とで構 成されている。そして、受信部2032は記録部203 3に接続され、記録部2033は情報記録媒体2034 に接続されている。

【0132】次に、その動作について説明する。情報記 録媒体2023に記録されている情報502は、制御部 2022からの制御信号501に基づいて送信部202 4へと送られる。送信部2024においては、制御信号 503に基づいて、情報504を情報記録装置2031 内の受信部2032に電磁波などの方法により送信す 40 る。この情報504は、配録部2033の作用によって 情報配録媒体2034に配録される。

【0133】以上のように、本発明による方法において は、情報提供装置への記録媒体の挿入口2002と排出 口2003とを分離した。そして、利用者は挿入口20 02に配録媒体を挿入した後、排出口2003へと移動 する。そのことにより、多数の利用者が次々と情報提供 装置を利用することが可能である。

【0134】図20は、図19の情報記録装置及び情報 再生装置のプロック図である。図20において、情報記 50 【0139】次に、その動作について説明する。情報提

録装置1071には情報記録媒体1073及び権利管理 部1072が装備されている。権利管理部1072は、 何えばCPU及びメモリから構成されている。そのメモ りには、情報配録媒体に配録されている情報を再生する 権利が記録されている。その権利は、例えば、情報記録 媒体内の情報をあと何度再生することができるか等を表 す残度数である。そして情報配録媒体1073は権利管 理部1072に接続されている。一方、情報再生部10 78は再生制御部1077に接続され、再生制御部10 77は再生選択部1075及び表示部1076に接続さ れている。以上の構成により、情報再生装置1074を 成している。

.22

【0135】次に、その動作について説明する。 権利管 理部1072において、先ず、情報記録媒体1073に 記録されている情報のうち、その情報自身の種類や再生 に必要な権利の度数等の情報122を読み出す。そし て、再生制御部1077に通信124が送信される。 再 生制御部1077においては、信号127を表示部10 76に送り通信124の内容を表示する。情報利用希望 20 者が、再生選択部1075を用いて、情報配録媒体10 73に配録されているもののうち、どれを再生するかを 選択する。すると、その選択情報126は再生制御部1 077に送られる。その選択情報126は、さらに通信 124を通じて、権利管理部1072に送られる。権利 管理部1072においては、残度数が、その情報を再生 するのに必要な度数以上であるかを調べる。そして、残 度数が、その情報を再生するのに必要な度数以上であれ ば、その情報は再生可能と見なされる。それと共に、残 度数から必要度数分が減じられる。

【0136】しかし、残废数が、その情報を再生するの に必要な度数以下であれば、その情報は再生不可と見な される。再生可能であれば、制御信号123が情報配録 媒体1073に送信される。それと共に、通信124が 再生制御部1077に送信される。そこで、情報記録媒 体1073は、記録されている情報125を出力する。 その情報125は情報再生部1078に送信される。再 生制御部1077から、情報再生の制御信号128が情 報再生部1078に送られる。 そして、 情報再生部10 78においては、受信した情報125を音声信号等12 9に変換して出力する。

【0137】以上のように、図20に示された情報記録 装置及び情報再生装置を使用すれば、再生時に、その情 報利用の選択及び決済を実現することができる。

【0138】 図21は、情報提供と情報収集が同時に容 島に行なえる実施例における情報配録再生装置の外観を 示したものである。 図21において、情報配録再生装置 の前面には表示部及び選択部が装備されている。また、 情報記録再生装置の側面には、イヤホン及び情報提供収 集装置結合端子601、602が装備されている。

供収集装置結合端子601を通じて、情報提供装置から 情報配録再生装置内に設置された記録媒体に情報がコピーされる。また、情報提供収集装置結合端子602を通 じて、情報提供装置へ情報配録再生装置内に設置された 記録媒体から情報が転送される。ただし、情報提供収集 装置結合端子601,602は、実際には同一の端子を 切り替えて使用されるようにしてもよい。さらに、この 実施例の装置には表示部と再生ポタンが装備されてい る。表示部には装置内に記録された情報の内容が表示さ れる。上配表示部に表示されたものをもとに、装置の使 用者は、選択ポタンを用いて必要な情報を選択的に再生 することができる。また、利用者は、その他の選択情報 を入力したりすることもできる。

【0140】図22は、図21の実施例に対するもう1つの実施例の外観図である。この例では、図21の情報 配録再生装置が、情報配録装置と情報再生装置とに物理 的に分離して構成されている。そして、上配情報配録装置の構成要素が1枚のカードに実装されている。図21の場合と対応する部分には同一の符号を付してあり、その説明は適宜省略する。図22の実施例の装置には、情報再生装置結合端子603がついている。

【0141】次に、その動作について説明する。情報提 供収集装置結合端子601を通じて、情報提供装置から 情報記録再生装置内に設置された記録媒体に情報がコピ ーされる。また、情報提供収集装置結合端子602を通 じて、情報提供装置へ情報記録再生装置内に設置された 配録媒体から情報が転送される。ただし、情報提供収集 装置結合端子601、602は、実際には同一の端子を 切り替えて使用されるようにしてもよい。また、再生時 には、情報記録装置と情報再生装置との間で、データ及 30 び飼御のやりとりが必要になる。それで、土記情報記録 装置と情報再生装置とを結合する情報再生装置結合端子 603が、情報記録装置及び情報再生装置に装備されて いる。ただし、情報記録装置の情報提供収集装置結合端 子601、602及び情報再生装置結合端子603は、 実際には1つの増子を切り替えて使用されるように構成 されることも可能である。

【0142】図23は、図21または図22の実施例における情報提供装備の外観図である。図3の実施例と対応する部分には同一の符号を付してあり、その説明は適40宜省略する。情報提供装置内には記録媒体が設置され情報が記録されている。この実施例の情報提供装置には、伝達手段としての有線で他の装置に接続されている。

【0143】次に、その動作について説明する。上配有線を通じて、他の装置から情報提供装置へ情報が送信されたり、情報提供装置内の情報が他の装置へ送信されたりすることが可能である。もちろん、上記有線は無線に代えて使用されることも可能である。また、上記情報提供装置への伝達手段とその他の装置からの伝達手段とは物理的に別なものでも良い。ただし、もちろん、信報提

供集装置への情報の入力は通信手段によらなくても、たとえば記録済みの記録媒体が直接、情報提供装置に挿入されても良い。また、情報提供装置からの情報の出力についても、情報提供装置内の記録媒体が取り外されたり、他の記録媒体へコピーされたりすることによって実現することもできる。そして、情報入手希望者は、欲しい情報を選択することができる。情報入手希望者は、情報提供装置の挿入排出口に、自分のもっている情報記録を置または情報記録装置を挿入する。そして、コピーを受けることによって情報が入手される。また、上記情報記録再生装置あるいは情報記録装置内の情報は、それらの装置が情報提供装置に挿入されてから排出される

24

再生装置または情報記録装置を挿入する。そして、コピーを受けることによって情報が入手される。また、上記情報記録再生装置あるいは情報記録装置内の情報は、それらの装置が情報提供装置に挿入されてから排出されるまでの間に収集される。上記情報は、情報提供装置内の記録媒体に転送されることによって、迅速かつ容易に収集される。なお、情報提供装置内の記録媒体としては、特に限定はないが、高速にコピーが可能でランダム・アクセスが可能なICメモリによって構成されると便利である。

【0144】図24は、図23の実施例における情報提供装置のブロック図である。また、図25は、図10の実施例における情報記録再生装置のブロック図である。

【0145】図24において、記録媒体3003は制御部3004に接続されている。制御部3004には、記録媒体3007と選択部3005及び表示部3006が接続されている。そして、以上の構成により、情報提供装置3001を成している。また、伝達部3008は制御部3004に接続され、伝達部3002は記録媒体3003に接続されている。

(0146) 図25において、再生部4012は紀録媒体4013に接続され、記録媒体4013は制御部4014に接続されている。そして、制御部4014には、記録媒体4017と選択部4015及び表示部4016が接続されている。

【0147】次に、その動作について説明する。情報提供装置3001では、有線、無線等の伝達部3002によって送られてきた情報401が、記録媒体3003に記録される。制御部3004においては、記録媒体3003から情報の内容等を示す情報404を設み出して、表示部3006に表示情報407として送り表示する。情報入手者語者は、この表示情報を参考にしてどの情報を入手するかを、選択手段3005を通じて入力する。選択部3005は、選択信号406を制御部3004に送る。そして、制御部3004においては、情報記録再生装置4011の制御部4014との通信403に基づいて、情報を出力するか否かの制御信号405を記録媒体3003に送る。さらに、記録媒体3003においては、その制御によって情報402を情報記録再生装置4011に送る。

供装置への伝達手段とその他の装置からの伝達手段とは 【0148】ここで、制御部3004と制御部4014 物理的に別なものでも良い。ただし、もちろん、情報提 50 との間の通信403の一例について説明を行なう。制御

部4014においては、情報記録再生装置4011が情 報提供装置3001からコピーを受ける権利情報の値、 例えば残度数情報Dを記憶している。一方、制御部30 04においては、情報入手希望者がコピーを希望する情 報をコピーした場合に、残皮数情報Dから減じる値、必 要度数 d を制御部4014に送信する。制御部4014 においては、残度数情報Dと必要度数dとの比較を行な う。ここで、Dがdより大きいか等しければ、制御部3 004にコピー要求信号が送信されると共に、Dからd を減じた値が新たな残度数情報Dの値とされる。また、 Dがdより小さい場合には、制御部3004にコピー不 要求信号が送信される。情報402の送信と同時に、ま たは前後して、情報提供装置3001は情報記録再生装 置4011から通信403を受信する。ここで、通信4 03の内容は、情報配録再生装置4011において、配 録媒体3003に配録されたどの情報が何回再生された か、といった情報である。その情報は記録媒体3007 に記録される。そして、制御部3004においては、例 えば一定時間毎に、記録媒体3007に蓄積された情報 408を読み出す。さらに、制御部3004において 20 は、その情報408に統計的な処理を加えた情報409 が、計算されて伝達部3008に送出される。

【0149】ただし、情報記録再生装置4011から送られてきた情報(通信403)は、制御部3004によって必ずしも記録媒体3007に蓄積されなくとも良い。そして、情報(通信403)は、直接あるいは統計処理等を施して伝達部3008に送出されても良い。また、情報(通信403)が記録媒体3007に蓄積された場合においても、伝達部3008に送りだす前に、特別の統計処理は行なわれなくても良い。さらにまた、制 30 御部3004が記録媒体3007に情報を記録する前に、統計処理などが施されても良い。

【0150】一方、情報提供装置3001から情報の入 手後、情報再生希望者の要求にしたがって、情報記録再 生装置4011ではまず、制御部4014は、記録媒体 4013から情報の内容等512を読み出す。そして、 その情報は表示部4016に表示情報515として送ら れて表示される。情報再生希望者は、この表示情報を参 考にして、どの情報を再生するかを、選択部4015を 通じて入力する。選択部4015は選択信号514を制 御邸3014に送る。そして、制御部4014において は、選択信号514に基づいて、紀録媒体4013に制 御信号513を送る。その制御信号513に基づいて、 記録媒体4013は情報511を出力する。そして、再 生部4012は情報511を再生する。また、制御部4 014においては、選択部4015への入力に依存する 情報516を、記録媒体4017に記録する。情報記録 再生装置4011が次回、情報提供装置3001と結合 される時、記録媒体4017に記録された情報は、制御

【0151】ここで、「選択部4015への入力に依存する情報」とは、例えば、再生選択信号514そのものであっても良い。この場合、情報配録再生装置4011の使用者の情報再生利用実態に関する情報が得られる。「選択部4015への入力に依存する情報」の別の例として、クイズ情報に関する解答選択情報、あるいは、それを統計処理した情報であってもよい。この場合、情報記録再生装置4011の使用者のクイズに対する正解率が得られる。「選択部4015への入力に依存する情報」の別の例として、アンケートに関する解答選択情報、あるいは、それを統計処理した情報であっても良

記録再生装置4011の使用者のクイズに対する正解率が得られる。「選択部4015への入力に依存する情報」の別の例として、アンケートに関する解答選択情報、あるいは、それを統計処理した情報であっても良い。上記情報が例えば、記録媒体4013から再生された音楽のうち、情報記録再生装置4011の使用者が最も気に入ったものの選択情報とする。その選択情報が統計処理されることによって、どの音楽に人気があるかが把握される。 【0152】なお、多数の情報提供装置において収集さ

れた情報がセンターに集められ、それらの情報が統計処 理されることによって、より有為な情報利用にかんする データが得られる。また、情報配録再生装置から情報提 供装置に送られる情報によって、情報提供装置から情報 記録再生装置への条件を変化させても良い。例えば、上 述のアンケートに協力する場合には、情報提供装置にお いて、情報入手のための必要度数dの値を予め小さくし ても良い。こうすることによって、情報使用者はより安 価で情報入手が可能となり、情報提供者はより多くの使 用者からのアンケート結果を期待することができる。 ま た、クイズ情報を提供する場合には、情報提供装置にお いて、その正解率によって必要度数dの値を変化させて もよい。こうすることにより、情報利用者はゲーム性を 楽しむことができる。なお、配録媒体3003及び配録 媒体3007においては、一体となっている配録媒体の 異なる部分を使用するようにしても良い。

【0153】図26は、図22に示す実施例の構成を示すプロック図である。図26において、記録媒体5017は制御部5018に接続され、制御部5018は記録媒体5013に接続されている。そして、以上の構成により、情報記録装置5021を成している。一方、再生部5012は制御部5019に接続されている。また、制御部5019は選択部5015及び表示部5016接続されている。そして、以上の構成により、情報再生装置5031を成している。

記録媒体4013は情報511を出力する。そして、再 生部4012は情報511を再生する。また、制御部4 014においては、選択部4015への入力に依存する 情報516を、記録媒体4017に記録する。情報記録 再生接置4011が次回、情報提供装置3001と結合 される時、記録媒体4017に記録された情報は、制御 部4014を通じて、情報提供装置3001に送られ 50 装置5021では、制御部5018が、配録媒体5018が、配録媒体501

3から情報の内容等612を読み出す。そして、その情 報は、制御部5019から通信121を介して表示部5・ 016に表示情報615として送られ、表示される。情 報再生希望者は、この表示情報を参考にして、どの情報 を再生するかを、選択部5015を通じて入力する。選 択部5015は選択信号614を制御部5019に送 る。そして、制御部5019においては、選択信号61 4に基づいて、制御部5018を介して、記録媒体50 13に制御信号613を送る。その制御信号613に基 して、再生部5012は制御信号617に基づき情報6 11を再生する。また、餌御部5018においては、改 択部5015への入力に依存する情報616を、記録媒 体5017に記録する。情報記録装置5021が次回、 図24に示す情報提供装置3001と結合される時、記 録媒体5017に記録された情報は、通信103を介し て情報提供装置3001に送られる。

【0155】なお、図24に示す情報提供装置3001 は情報提供機能と情報収集機能の両方を備えており、情報提供と情報収集が同時に容易に行なえるという利点を20 持っているが、これは必ずしも必要条件ではなく、情報提供装置で情報の提供を行ない、情報収集装置で情報の提供を行ない。情報収集装置で情報の収集を行なうようにしてもよい。

【0156】以上の説明からも明らかなように、本発明では、1 Cメモリー等で構成された記録媒体を装備した情報記録装置に音楽やクイズ等の番組が、情報提供装置から転送される。それと共に、これらの番組を再生する際に、視聴者が入力した選択情報が記録される。そして、これらの情報が情報提供装置に転送される。そして、これらの情報が情報提供装置に転送される。そして、情報提供者が容易に、情報利用者の情報利用実銀や好み等を把握することができる。さらにこうした情報を利用してサービス内容を充実させることができる。

[0157]

【発明の効果】以上のように、請求項1に記載の情報提供収集装置によれば、情報記録媒体および権利管理手段を備え、権利管理手段の制御により情報の記録または再生の制御を行なう情報記録装置から成るようにしたので、柔軟な料金支払いが可能となる。

【0158】 関求項2 に配載の情報提供収集装置によれ 40 は、上配権利管理手段においては、上配配録媒体に記録された権利管理情報に基づいて制御を行なうようにしたので、柔軟な料金支払いが可能となる。

【0159】 簡求項3に記載の情報提供収集装置によれば、上記権利管理情報は、記録もしくは再生前後で内容が変化するようにしたので、柔軟な料金支払いが可能となる。

【0160】請求項4に配載の情報提供収集装置によれ は、上記権利管理情報は、記録または再生が許可される 有効期限であるようにしたので、柔軟な料金支払いが可 50 能となる。

【0161】 節求項5に配載の情報提供収集装置によれば、上記記録媒体に記録される情報の一部は、その情報自身の内容を示すものであるようにしたので、柔軟な料金支払いが可能となる。

【0162】 請求項6に配敏の情報提供収集装置によれば、上記記録媒体は、半導体メモリであるようにしたので、情報の迅速な入手が可能となる。

> 【0164】請求項8に記載の情報提供収集装置によれば、上記記録媒体には書き換え不可能な情報を記録し、 再生時に権利管理を行なうようにしたので、柔軟な料金 支払いが可能となる。

> 【0165】 請求項9に記載の情報提供収集装置によれば、上記記録媒体には、情報提供装置から客き換え可能な情報を記録するようにしたので、柔軟な料金支払いが可能となる。

【0166】 請求項10に記載の情報提供収集装置によれば、上記記録媒体への情報の記録は、上記情報提供装置による正当性認証が成立した場合に行なわれるようにしたので、情報管理の安全性が高められる。

【0167】 請求項11に記載の情報提供収集装置によれば、上記正当性認証は、上記情報提供装置及び上記情報促験装置に記録され、その値自身が暗号化された健情報に基づいて行なわれるようにしたので、情報管理の安全性が高められる。

EXTENDED ABSTRACT

A Secure Distributed Capability Based System

Howard L. Johnson Information Intelligence Sciences, Inc. University of Denver, New College

John F. Koegel, Rhonda M. Koegel Department of Mathematics and Computer Science University of Denver Denver, Colorado 80210

A novel design for a secure distributed system is described and evaluated. A capability based computer architecture is combined with cryptographic network security techniques to protect global objects and preserve access rights across system boundaries. The resulting architecture is evaluated against several criteria, including the DoD Computer System Evaluation Criteria. The strengths and weaknesses of the approach are presented.

key words: computer security; distributed system security; capability architecture; network encryption

1. Introduction

A distributed system connects various computing entities in several locations so resources can be shared by users. Distributed computing offers the advantage of flexibility so that each facility can be locally controlled and configured for a specific application. It also offers incremental growth so that additional features can be easily added, usually at a lower cost than upgrading a central host. The connection of distributed systems facilitates information sharing. The physical network can be implemented by point-to-point or multi-point links, LAN's or WAN's.

In a single centralized computing facility, system security is achieved through physical, operational, and system controls. System controls include operating system functions such as login passwords, file system protection, and memory management. In a distributed environment, these controls can still be effective for securing each specific system. However, additional problems arise because of the interconnection of systems and the information flows between systems.

There are two areas of concern in securing a distributed system. The first, that of securing the network facilities, has received greater attention in the literature. This need stems from the

Permission to copy without fee all or part of this material is granted provided that the copies are not made or distributed for direct commercial advantage, the ACM copyright notice and the title of the publication and its date appear, and notice is given that copying is by permission of the Association for Computing Machinery. fact that physical facilities in most prevalent use today as communication media (land lines, microwave links, and satellite channels) offer little protection for themselves [1]. To secure these facilities, some type of cryptography is employed. The user who wishes to obtain an off-the-shelf solution to the problem can use a conventional substitution-permutation algorithm, such as the NBS's DES [2] or a public key algorithm such as ESA [3]. Although there is active research in both breaking and strengthening these techniques, for many applications currently available methods will suffice.

Even with encryption, a network is still vulnerable to certain types of thrests against the communications protocol being employed [4]. Conventional link-level protocols only allow the data field to be encrypted, while control and address fields are transmitted unencrypted. This leaves a network open to such attacks as message modification and message replay.

The second area of concern, that has received relatively little attention in the literature, is the control of information protection across system boundaries. Within a given computer facility, the operating system can be used to enforce uniform and constant protection of information. However, once the information is removed from the computer, these controls no longer apply. Protection of information can only be maintained in a local environment. It would be preferable if access rights could be enforced across system boundaries. This would produce a secure distributed system and protect proprietary software and data.

Consider the case of a remote database user who has purchased read access to certain information in the database. If the user accesses the

392

database with a personal computer, it is a straightforward step for the user to read the database
and store the information in the PC. Once the
user has a local copy, then he/she is free to
distribute this data to any other party, regardless
of whether that party has purchased access to
the database. Thus, the access protection of
a single system is easily violated by svailability
of distributed computing.

The database owner could protect his/her investment by requiring the user to purchase a proprietary interface program to access and manipulate the data. Not only does this restrict the user and provide an economic deterrent to the sale of information, it also makes this protection dependent on the copy protection of the interface program.

Another example is if the host is used as a central distribution point for software, possibly for a CAI application. Once a module is removed from the host, it is very difficult to limit the production of duplicates. Encryption of the key elements of a program has been proposed as a solution [5]. However, not only does this place additional burden on the applications programmer, but also requires a design that may not be met by gany programs.

Most secure network strategies deal only with encryption of data as it is transmitted across network facilities, and not at all with the management of protection across system boundaries. However, there are numerous instances of distributed information system security and proprietary software protection not solved by network encryption. The authors believe that an integrated solution involving both capability-based computers and network protection using encryption and a secure protocol can provide distributed system security.

After discussion of network security and capability architectures in a distributed environment, we present an integrated design of a secure distributed capability based system. The resulting architecture is evaluated against several criteria, including the DoD Computer System Evaluation Criteria.

2. Network Security

2.1 General

This paper pertains to hardware (and a few hardware/software) data system security protection mechanisms, but design must be accomplished in the context of existing or proposed physical security, personnel security, operations security, emanations security, and communications security. The implementation of each guides implementation of the network data system security. A key criteria is minimized degradation in throughput and response.

A brief summary of network security follows. The term "association" is used to refer to a (potentially bidirectional) end-to-end data path through the network. The reader is directed to

Voydock and Kent [4] and to Davies and Price [6] for a more complete treatment of these topics.

2.2 Threat

From [4], passive attacks to network security are intended to bring about the unauthorized release of information or authorized release of information sufficient to perform a traffic analysis. Passive attacks usually cannot be detected but can be prevented.

Active attacks include unauthorized modification of information, unauthorized resource use denial, and attempts to initiate spurious associations. Active attacks cannot be prevented, but can usually be detected. In a network environment we are equally concerned with threats internal to the system as those outside.

2.3 Protection Principles

2.3.1 Encryption Techniques

Rushby and Randell [7] observed that separation is one of the key elements in enforcing a secure system, and that four separation methods exist: physical, temporal, cryptographical and logical. In a communication system, physical separation is the most desirable, but unless the system is completely contained in a secure building environment or in a specially constructed tunnel vault, the distances involved leave too much line unprotected.

Some transmission media are more secure than others, such as fiber optics, directional satellite links, and exotic military communications systems, but each has a reasonable vulnerability to capture or disruption of data flow. Within a secure environment, either logical or cryptographical means can be employed to protect data authenticity. Methods analogous to periods processing can make use of transmission links for different levels of control at different isolated periods of protection, performing necessary cleansing of storage registers or buffers, if any exist.

Data encryption is the primary means by which communicated data are protected. It directly prevents passive attacks by preventing an intruder from seeing data in the clear. Data patterns can be masked by using a unique key for each association, employing cipher block chaining which causes each encrypted value to be a complex function of previously encrypted data, and appropriately selecting the proper initialization vector for chaining.

There are three ways to incorporate cryptography into a communications system: link, node and end-to-end encryption. In link encryption, cryptographic devices bracket a communication line between two nodes. Node encryption uses a protected security module to absolutely protect data at the node. In end-to-end encryption, data are deciphered only at their final destination, requiring several keys at each origin and destination.

There are several tradeoff variables in choosing between link, node, and end-to-end encryption:

- the number of encryption units required (and therefore the potential response degradation)
- the number of keys required by each node originating and receiving data
- the complexity required in specifying a routing path independent of the specification of data, or alternately the overhead in interim decryption attempts.

The number of security devices are fewer in end-to-end encryption, but number of keys required is greater. Addressing information must be developed independent of the data, or interim decryption attempts must be made. Both create a difficult design problem. Link and node encryption are normally transparent to the user, but so is end-to-end encryption if initiated by system services. The message and its header can both be encryption and end-to-end encryption normally both message and header are encrypted. The exception is a technique whereby each node attempts to decrypt the message and passes it if unsuccessful or if the successfully decrypted message indicates another addressee. If not all nodes have encryption facilities or if encryption of only selected messages is desired due to overhead, an additional mechanism is required to enable and disable the encryption function.

Voydock and Kent [4] observed that a communication network can also be viewed as providing a medium for establishing associations between protocol entities. An association oriented approach constitutes a refinement to end-to-end measures. It not only protects the path, but reduces the probability of undetected cross talk, whether induced by hardware or software.

2.3.2 Detection Techniques

If the communications header is in clear form, transmitting bogus messages helps prevent traffic analysis. The protocol layer selection determines the precision with which traffic analysis can be done. If encryption is performed in the presentation layer, an intruder could detarmine which presentation, session, and transport entities were involved. Performing encryption in the transport, network, or link layers limits the intruder to observing patterns at the network address levels. Contradistinctively, the higher the layer, the more of the path protected.

To prevent message stream modification, there are measures that ensure message integrity. Measures that ensure message authenticity rely on the integrity measures. Measures that ensure measures ordering rely on both of the previous measures. Countermeasures involve use of unique keys, sequence numbers, and error detection codes.

Denial of service attacks often can be detected by message stream modification countermeasures. If the attacks begin when an association

is quiescent, a request response mechanism must be employed.

For spurious association attacks, hierarchic or public key systems can defeat attempts to establish an association under a false identity. Timestamp, checksums, and/or random challenge-response mechanisms detect playing back of a previously legitimate association-initiation.

A covert channel allows a process to transfer information in a manner that violates the systems security policy. A covert timing channel is a covert channel in which one process signals information to another by modulating its own use of system resource (e.g., CPU time) in such a way that this manipulation affects the real response time observed by the second process. Covert channels with low bandwidths represent a lower threat than those with high bendwidths. In any complex system there are a number of relatively low-bandwidth covert channels whose existence is deeply ingrained in the system design. Faced with the large potential cost of reducing the bandwidths of such covert channels, it is felt that those with a maximum bandwidth of less than one bit per second are acceptable in most applications environments [8]. The channel bandwidth can be reduced by introducing noise, or complicated traffic patterns, making it difficult to detect and extract deliberate modulation.

2

3

These measures provide security only in a probabilistic sense, providing a high probability that the intruder cannot subvert the encryption algorithm and that active attacks will be detected. The goal is to make it more difficult for the intruder to break the system than to create the information through other means.

2.4 Protection Mechanisms

2.4.1 Reference Monitors

A reference monitor [9] must be tamperproof, must always be invoked, and must be small enough to be subject to analysis and tests, the completeness of which can be assured. The reference monitor is the most popular type of authentication mechanism. Interaction is generally only with the message header, whereas cryptographic compatibility serves to authenticate an entire message. Further, data can remain encrypted for continued protection while in buffers, storage, and internal communications. The reference monitor allows such things as separate encryption of the message without the header and requires neither the time and cost spent in encryption nor the cost of a key management and distribution system.

2.4.2 Authentication and Secrecy

Cryptography can not only be used for security, but can also be employed for authenticity. Solutions using encryption are equally applicable to local area networks as they are to large long-haul communications networks. Different applications lead to different solutions, as do design tradeoffs based on changing technologies (e.g., fiber optics), speed, cost, and level of protec-

tion. The following are key topics associated with cryptography.

Secrecy and Authentication - Secrecy exists when it is computationally infeasible to determine the deciphering transformation. Authenticity exists when it is computationally infeasible to determine the enciphering transformation. The latter establishes the validity of a claimed identity (e.g., of the sender in a digital signature or user verification application).

Substitution-Permutation Ciphers (e.g., the DES) - Information theory has allowed theoretical data protection to any degree desired, based on the length of the key and repeated application of the algorithm ateps; even when the algorithm is known to the perpetrator. This class of cipher has been implemented into a very fast chip. As cryptanalysis capability increases, the dimensionality of the implementation can be increased, with a corresponding loss in efficiency, (unless microcircuit technology makes up the difference). A DES block cipher breaks the message into blocks and enciphers each with the same key. A stream cipher breaks the message into characters or bits and enciphers them with successive elements of a key stream (which might be the prior encrypted text as in the cipher block chaining mode and the cipher feedback mode of the DES).

Public Key Ciphers (e.g., the RSA scheme) - These methods of protection provide both secrecy and authenticity. Several public key ciphers have fallen prey to cryptanalysts, but the RSA cipher stands a good chance of surviving these attacks based on the mathematical history of foctorization of large numbers (although a surprisingly large number was factored on the Cray at Sandia Laboratories recently). Keys are large and computation still relatively complex. Technologies such as gallium arsenide and perallel bit stream implementations should solve immediate speed problems, however, as cryptanalysis comes closer, the size of the prime numbers must be increased.

One-way Ciphers - These virtually unknown, but simply implemented ciphers are important to design because once data are encrypted they cannot be simply decrypted, even by the originator. They are useful in applications, for example, where authentication of passwords can be accomplished by comparing pairs of encrypted data values. Certain simple functions such as comparison can be accomplished in encryption space.

2.4.3 Key Management Design

The responsibility for key management depends on the security policy and the choice of implementation. Unless keys are given at least the same level of protection as the dats, they will be the weak link. Once the penetrator has gained access to the key (generally a very small piece of data) he has gained access to all data. Techniques of generating, transmitting and protecting keys include host keys, hierarchical key protection, partitioning of keys for different protection levels, and diverse means by which the key man-

agement system interfaces with the rest of the system [7].

In the normal implementation of public key systems, the public key is published with no protection whatsoever. The private key is originated and held by only one person. Certain implementations require distribution of the private key under a protected key distribution scheme, especially where the private key is used within the processor as a means of both secrecy and authentication of source or another system variable.

A third party or a host can provide the authentication necessary for key distribution. There are several established approaches for the implementation of a distributed session key system, appropriate to network communications. The public key system has the property that two parties can establish a secret key for use in a unique session between them, obviating involvement of a third party. The strategy can be repeated often for a greater degree of protection. Prolonged use of a single key makes a system more vulnerable to cryptonalysis. The degree of added vulnerability depends on the cryptographic technique used, which in turn is related to the nature of data transmission, intercommunication requirements, and security inherent to the communications system.

2.5 Network Protocol Considerations

In late 1970's, the International Standards Organization adopted a network architecture known as the reference model for open system interconnection, ISO/OSI. Layers 1 to 3 are concerned with data transmission/routing and deal respectively with physical, data link, and network concerns. Layer 4 provides end-to-end control of data transport. Layers 5 and 7 are the session, presentation, and application layers. Some of the possible approaches to implementing security under ISO/OSI are as follows:

Laye	r Protocol	Security
7	Applications Services	User identification, encryption of stored data, key distribution.
6	Presentation Formats	User controlled use of encryption for secrecy and identification including a user request for encryption.
5	User Session Control	Establishing secrecy and authentication during the conduct of a session between system users (people and programs). The most desirable encryption point in high level protocols [4].

- Transport Flow Control
- 3 Network Routing
- 2 Data Link Control

Security control the entirely in communications syssuch as link tens where encryption the data are protected between adjacent network nodes and decrypted and are re-encrypted at each node. Security entirely control in the network communications use encryption ದಾರe where data schemes ere not in the clear an intermediate at node, but are rather and redecrypted encrypted by a special security module.

1 Physical Connection

Design should be such that acceptance of data or requests into the memory associated with a node should be based on the assurance that the transaction is legitimate and does not violate the security policy. An example of protocol layer 2 (data link) encryption is provided in [10], in which source and destination subnets and trusted interface units are designated in the packet formats for the carrier sense multiple access with collision detection (CSMA/CD) protocol. The protocol also specifies the data security level.

Popek and Kline [11] identified the important issues to be addressed in defining secure protocols:

- establishing initial cleartext/ciphertext/ cleartext channel from sender to receiver
- passing cleartext addresses without providing a leakage path
- determining error recovery and resynchronization mechanisms to be employed
- performing flow control
- closing channels
- interaction of the encryption protocols with the rest of the protocols
- dependence on software in implementation.

3. Capability Architectures

3.1 Description

A capability-based computer uses an architecture in which objects are addressed by means of a two-component entity called a capability. One component of the capability is a unique object identification number which is translated by the hardware into an actual machine address. The other component of the capability can be viewed as an access rights field which identifies to the hardware the operations that the owner of the capability may perform on the object.

Capability architectures have been promoted for a number of reasons including their hardware support for object-based programming [12] and system security [13]. A capability-based computer offers greater generality than does a conventional computer architecture. This generality includes hardware support for object identification and management which allows the user to approach the machine interface at a higher level of abstraction: By encapsulating objects and defining unique object identification numbers, the system can provide a more secure hardware base on which to place the operating system.

To maintain system security and integrity, it is typical for a capability-based computer to use hardware tagging of capabilities stored in memory [14,15]. When a user attempts to use a capability to reference an object, the hardware tag indicates that use of the capability is a legal one. The capability itself will be further compared with the operation that the user is attempting to ensure its validity. Since the tag controlled by hardware, the user is not able to arbitrarily modify the tag bits associated with a memory address. If the user attempts to modify a capability, the hardware will reset the associated tag bits.

Another feature of capability architectures is that the machine interface is usually implemented at a higher level than that of a coaventional architecture. This higher level includes functions that relate to object addressing and object management. By placing greater functionality in the firmware, the goal is to improve the performance of the architecture while ensuring that the object related operations can not be interrupted and possibly altered by another process. Thus, the security of a capability-based computer follows the precept that hardware is inherently more secure than software.

3.2 Design Issues

There are a number of issues to be faced by the designer of a capability machine. These include:

- generating and maintaining unique object id's for a large number of objects
- managing objects, including object deletion and the dangling pointer problem

- controlling the copying of capabilities for object sharing
- defining object categories
- speeding-up object address translation
- permitting called programs to have more access rights than their callers for operating system functions
- providing object encapsulation to promote object protection.

The resolution of these issues can take various forms. Levy [16] surveys many of these in his book on capability based systems.

3.3 Goals

For the purposes of a discussion of capability system goals, we assume that the network facilities for the distributed system have already been secured using encryption and secure high-level protocols as described in the previous section. By employing capabilities for defining and protecting objects in a distributed environment, the following goals can be achieved:

Objects can be transferred across system boundaries while preserving access rights across these boundaries. This is accomplished by forcing any object transfer between systems to be accompanied by the transfer of the capability needed to access the object. Without this capability, the object can not be accessed.

The process performing the copy operation must possess the original capability on the source computer to effect the copy operation. The capability which results on the destination computer must uniquely identify the copied object and must have access rights equal to or less than those of the original capability. The network interfaces for each host are responsible for checking the validity of the operation. The network interface at the destination must generate a unique object id (possibly using already existing firmware for object creation) and must translate the source capability accordingly. At the same time it must preserve or decrease the access rights of the translated capability.

- Capabilities for objects can be transferred across system boundaries. This allows capabilities to be used to reference remote objects. This requires that the capability contain a field which identifies the network node containing the object. Alternatively, the capability could reference a local "network reference object" which would contain the information needed by the operating system and network interface to address the remote object.
- Objects can be referenced across system boundaries using either user-local or user-remote capabilities for these objects. This is

analogous to a distributed file system, but is generalized to all the object categories defined in a given architecture.

A user-local capability is one which is contained in the user's capability list in the local host from which the object reference is being made. Similarly, a user-remote capability is one that is contained in the user's capability list on the remote host that contains the object being referenced. Capabilities used to access objects created remotely are derived from the capability generated by the system where the object was created.

In describing these goals, it is assumed that object identification and addressing are defined locally. When a capability is transferred between systems, a new object id will be created by the destination host automatically. This object id will have meaning only in the context of this host. This will preclude the need for designing a universal object identification scheme that would be impractical both in terms of the size of the id needed and the overhead to coordinate the use of id's. It is also assumed that a capability can be safely and accurately transmitted between systems. The network interface for the capability-based computer controls the encryption and protocols needed to effect secure communications.

To support the preceding goals, a number of issues need to be addressed. First, in keeping with the fine granularity of capability access rights, it would be beneficial to define additional access rights that deal with network operations. These might include the capability to copy an object or the capability itself across the network interface. Access rights for remote operations on capabilities or objects might also be defined this way. Controlling the copying of a capability across a network interface has the same implication as controlling it between users on a single system.

Second, in some systems, an object can be given its own capability list for accessing whatever objects are needed in its operations. When the object is copied from one system to another, is this capability list also preserved? Although it may be desirable to define a network copy operation for capability lists, it does not seem advisable to automatically copy this list and translate it when the object itself is copied. This should be a separate operation, if done at all.

In translating a capability copied from one system to another, there are a number of conditions to be observed. First, the translated capability should never be greater than the original capability. This would violate the basic security principles of capability-based architectures. Second, the process receiving the copied capability should not be able to increase its access over any other objects by means of the copy operation. The situation where the copying of a capability gives the owner greater privilege must be avoided. Finally, if the two computers do not define their objects in the same fashion

(heterogeneous distributed capability system case), the host receiving the capability must translate it to an equivalent or lower object and access rights pair, or else reject the operation.

4. A Secure Distributed Capability System

4.1 Integrated Design

In this paper we deal with distributed systems of user terminals, processing hosts, storage elements, and other resources. The processors and terminals may be heterogeneous or of a compatible family. Our goal is to consider a design based on a combination of cryptography and a capability based control to provide network security.

There is a strong desire in a distributed system for the system to be transparent to the user. Rushby and Randell [7] established that network transparency is most easily achieved if all system components have a common interface. The "recursive structuring" principle for the design of distributed systems states: each component of a distributed system should be functionally equivalent to the entire system of which it is a part. This does not preclude heterogeneous sub-elements, since each system interface must contain provisions for exception conditions to be returned when a requested operation cannot be carried out. The value of the recursive structuring of a system is that, by definition, it is indefinitely extensible.

To use the capability approach in a distributed environment, additional capability categories are needed. These include definitions that protect the network interface and that validate specific network operations:

- network interface to a specific node can be used
- network parameters can be modified, examined, or tested
- capability can be copied across network
- object can be copied across network
- object can be used remotely
- object can be deleted remotely if user has delete capability
- capability can be translated (needed by network interface)
- network object (for referencing remote objects) can be created, managed, or deleted
- audit trail enable.

The network interface design should follow the standard seven-layer ISO OSI model. It will be subject to the same protection that the operating system is given on a capability machine, plus additional protection provided by whatever capabilities are required to use the interface.

The various network protocol layers should be designed to promote detection of active network attacks. Data encryption can be built into the user session layer.

All network operations which require capability checking for validation are passed by the network interface to the operating system and/or firmware. Outgoing network transactions are checked in the normal way by comparing the attempted operation with the capability list of the agent process. Incoming transactions that involve the copying of a capability from a remote system will also involve the translation of the object identification within the capability and the object encapsulation to a valid object identification for the destination host. This translation will also be a firmware function that most closely resembles object creation.

4.2 Multilevel Considerations

If a distributed capability system were used in a multilevel security environment, both network security mechanisms and the capability architecture would need to be enhanced to recognize and protect objects of different classification levels.

Here we review some of the characteristics of a multilevel secure system and then discuss its relation to the one proposed. Users are assigned levels, some resources are assigned maximum levels and one must keep track of the high watermark (highest level received since cleansing) of the device. Objects have levels indicated by labels. A process keeps track of the high watermark of objects used in a current period. Users can specify the level of an object created and a process can specify the level of the objects it creates (which must dominate, i.e., be greater than or equal to, the current high watermark). There are several other details that pertain to specific implementations that will not be dealt with here, such as the principals that control the flow of data based on dominance rules.

The protection domain extends across the network, encompassing its nodes. Capabilities are used to determine transmission of objects across nodes, the same as they are within a node. The transmission is not allowed if the process does not possess the capability (e.g., the high watermark is greater than the security level of the destination). At the receiving node the processes cannot have access to the object without the appropriate capability.

Encryption for suthenticity, key passing, and secrecy protection is within the encapsulated portion of the capability protocol, implemented in firmare. Also, detection techniques such as those discussed earlier — unique transmission key, sequence numbers, error detection, request response, and time stamps — are implemented and initiated at that level.

Encryption is at the user session protocol (layer 5), so that there is end-to-end encryption between geographically separate parts of the protection domain. The capability system would communicate the necessary protocol information to the

transport and other lower layers, providing the necessary protocol parameters.

Modifications to the capability hardware would consist of additional types of capabilities and additional bits to the object identification field of the capability. When a user account is created on a system, the profile of that user would be given capabilities to read, write, create and delete objects of specific classification levels. The capability to perform an operation at one classification level would allow the same operation to be performed at a lower level, provided that an indirect data leakage did not result. The user could also be given the capability to create objects, which could also be given the capability to read, write, create and delete sub-objects of different levels, all of which must be dominated by the user's own capabilities.

When an object is created, it would be created at a given classification level. This level could be economically encoded in the object identification field (2 bits provides 4 levels), which would also be encopsulated with the object itself. Thus, when any data transfer operation is performed on a given object, the object's classification level is used to insure that a legal data flow is occurring.

Additional capabilities would be needed to permit the changing of an object's classification level. Both the classification checks and capability tests would be performed by firmware. The rules governing legal and illegal data movements between levels would also be stored in firmware.

5. Evaluation

Just as the user community is slow to accept some of the most obviously beneficial computing improvements, it is felt that part of the task in portraying an unfamiliar way of thinking is to show consistency with present approaches. Rushby and Randell [7] have described a distributed computing system composed of small trustworthy security mechanisms linked together to provide multilevel security in such a way that the entire system appears as single system to its users. A prototype has been auccessfully demonstrated. Key to this system are separate security processors, operating in parallel with the general purpose processors, and a software subsystem "the Newcastle Connection," that links multiple UNIX systems, and does not require applications programs or operating system to be changed.

The Department of Defense Trusted Computer System Evaluation Criteria [8] will serve as a standard for the accreditation of commercial systems, at least in the near term, thus it was considered important to compare this system against those criteria. We have also considered Saltzer and Schroeder's [17] principles of design.

5.1 Definitions [8]

"Trusted Computing Base - All protection mechanisms within a computer system (including hardware, firmware, and software) the combination of which is responsible for enforcing the security policy." The cryptographic capabilities network can be considered a trusted computer base, but has an unusually large scope in that it encompasses a network.

"Domain - The set of objects that a subject has the ability to access." An object is defined here as a passive entity that contains or receives information, for which access potentially implies access to the information it contains. The capabilities system considers domain in the same context, however, it further specifies and controls resources and enforces the extent and type of access.

"Dominate - Security level SI is said to dominate security level S2 if the hierarchical classification of SI is greater than or equal to that of S2 and the non-hierarchical categories of S1 include those of S2 as a subset." A dominant capability can be enforced categorizing object id's into the appropriate classifications. Another approach would be to define a capabilities base at each independent level. In either case, the capabilities system can further restrict usage to what is required by a task.

"Reference Monitor Concept - An access control concept that refers to an abstract machine that mediates all accesses to objects by subjects." The hardware, firmware, and software elements of a Trusted Computing Base that implement the reference monitor concept are referred to as the security kernel. The capabilities based system employs and enforces a reference monitor type of control, independent of special hardware (although special hardware may be required to enhance performance).

"Star Property - A Bell-LaPadula security model [18] rule allowing a subject write access to an object only if the security level of an subject is dominated by the security level of the object." This rule can be enforced in a capabilities based system, but the implementation must place capabilities in control of the system and not the user.

5.1.2 Requirements [8]

"Discretionary access control - The trusted computer base (TCB) shall define and control access between named users and named objects. The enforcement mechanism shall allow users to specify and control sharing of those objects." Capability access control involves restricting access to objects or resources based on the possession of a ticket that unconditionally suthorizes the possessor (user or process) access to the named object with specific rights, where objects include both resources and data. The list is actually inverted from the normal access control list, but contains at least the same information. It can be used by the operating system to emulate the discre-

tionary access model. If the system places the user "in charge", he can establish his own policy with respect to the capabilities possessed by him. In most DoD implementations, however, only a special user (the security officer) can pass capabilities to a user that has not previously possessed them at that level.

"Object Reuse - When a storage object is initially assigned, allocated, or reallocated to a subject from the TCB's pool of unused storage objects, the TCB shall assure that the object contains no data for which the subject is not authorized." This requires cleansing of the resource upon reallocation.

"Labels - Sensitivity labels associated with each ADP system resource that is directly or indirectly accessible by subjects external to the TCB shall be maintained by the TCB and shall be used as the basis for mandatory access control decisions." The assignment of capabilities can be based on the sensitivity of resources. The sensitivity labels can be built directly into the encapsulation scheme as a standard part of the object control. The resources are assigned virtually with the security manager having ownership of the assignment table with the right of revocation and reassignment.

"Label Integrity - Sensitivity labels shall accurately represent security levels of the specific subjects or objects with which they are associated. When exported by the TCB, sensitivity labels shall accurately and unambiguously represent the internal labels and shall be associated with the information being exported." As stated before, the sensitivity labels can be inherent to the definition of the capabilities and become part of the encapsulation scheme. The capability system enforces the authorization for exportation.

"Exportation of Label Information - The TCB shall designate each communications channel and I/O device as either single-level or multilevel, with changes done manually and any changes auditable. When the TCB exports an object to an I/O device, the sensitivity label associated with that object shall also be exported and, in the case of multilevel devices, shall reside on the same physical medium as the exported information and shall be

in the same form (i.e., machine readable or human readable form). When the TCB exports or imports an object over a multilevel communication channel, the protocol used on that channel shall provide for the unambiguous pairing between the sensitivity labels and the associated information that is sent or received." This functionality can be incorporated in the capability system. The capability system enforces the transfer request, whereas a conventional system may not.

"Device labels - The TCB shall support the assignment of minimum and maximum security levels to all attached physical devices to enforce the constraints imposed by the physical environments in which the devices are located." This is indirectly accomplished by the assignment of capabilities. This corresponds better with non data processing information control.

"Mandatory Access Control - The TCB shall enforce a mandatory access control policy over all resources (i.e., subjects, storage objects, and I/O devices) that are directly or indirectly accessible by subjects external to the TCB." External subjects become internally controlled by the capabilities list when they are given the capability of access, otherwise they possess none.

"Identification and Authentication - The TCB shall require users to identify themselves to it before beginning to perform any other actions that the TCB is expected to mediate. Furthermore, the TCB shall maintain authentication data that includes information for verifying the identity of individual users as well as maximum security levels to all attached physical devices." The identification must be part of the issuing of capabilities. The association with devices is more restrictive than simple security levels.

"Trusted Path - The TCB shall support a trusted communications path between itself and users for use when a positive TCB-to-user connection is required. Communications via this trusted path shall be activated exclusively by the user or the TCB and shall be logically isolated and unmistakably distinguishable from other paths." Since user consoles are resources, and because of the cryptographic requirements of this system, this requirement is rigidly enforced.

"Audit - The TCB shall be able to create, maintain, and protect from modification or unauthorized access or destruction an audit trail of access to the object it protects." The audit trail will be a capability assigned solely to the security control function.

5.2 Principles of Design

Saltzer and Schroeder [17] identified several design principles for protection mechanisms. Following is an evaluation of this approach against those criteria:

Least privilege - The capability system enforces this principle to a greater extent than existing implementations.

Economy of mechanism - This architecture supports security control to a far greater degree than general architectures and therefore should be verifiable. In general, hardware is simpler to verify than software or software/hardware mechanisms.

Complete mediation - This requirement is a basic design principle.

Open Design - The design is completely open and does not depend on any secret parts.

Separation of privilege - Satisfaction of this requirement is moot, although the implementation depends on the technique for allocation of capabilities and identification when logging on the system. The implementation of labels and a consistency check against user identification should satisfy this requirement.

Least common mechanism - The mechanism is protected and each user has a separate virtual capability. The concept of distributed control in physically distributed elements tends to support this principle, but certainly not to its ultimate intent.

Psychological acceptability - The mechanism cannot be bypassed and is transparent to the user.

5.3 Advantages and Disadvantages

A capability approach to distributed system security offers strong object protection in both local and distributed contexts. This strength derives from firmware support of access rights at the machine addressing level. In addition, the design offers greater granularity of access rights than is found in a conventional operating system.

A distributed capability system is not without its complications. One potential problem is the vulnerability of capabilities as they are transmitted across the network. This is analogous to the problem of password transmission across a network in a conventional system. Both can be solved by encryption.

Another possible problem is the translation of capabilities in an environment of heterogeneous capability machines. Because object categories may vary from machine to machine, the difficulty is in preserving the meaning of the capability when it is translated. From a security standpoint, security is not compromised if the original capability dominates the translated capability.

A more difficult situation is the linking of a conventional computer to a network of capability systems. Since conventional operating systems do not support the same granularity of protection, meaningful sharing and strong security will probably not be compatible goals. The conventional computer will be the Achille's heel of the distributed capability network if remote object references are uncontrolled.

A final issue is the translation of the capability list for an object that is being copied from one system to another. For efficiency reasons, we have considered it advantageous for the copy operation to copy only the object and the capability for its use, and ignore the capability lists belonging to the object and any of its creations.

6. Summary

The meshing of capability characteristics and a cryptographically supported network is natural. Cryptography will support network communications and detection functions using public key systems or trusted interface modules to provide satisfaction of security protection from the outside world, as well as authentication functions. The capability based resource control provides a simpler environment than that dealt with by a discretionary kernelized system. There is a natural checking mechanism for determination of

system misuse and simpler recovery in the event of a malicious internal attack. The system can be changed as the security policy changes without hardware/software modification.

A capability approach can provide a distributed system where data originators or some central authority determine the data, program, and sharing policy. The distributed capability system described here solves the problem of preserving access rights across system boundaries, since an object can not be referenced or copied across the network interface without processing the capability for a specific operation. In comparison to a conventional operating system, a capability based design offers greater protection and more granularity.

With proper implementation, the system also appears to be capable of supporting the DoD trusted system requirements under the unique DoD security policy implementation. Further, a properly architected capability machine and network interface could provide a secure multilevel distributed system. The DoD security requirements could be met by a design including the following provisions:

Star property should be enforced by the system through assignment of high water mark levels to capabilities, objects, and resources.

- Sensitivity labels need to be integrated into the capabilities protection mechanism, and then be supported accordingly.
- User identification and authentication must be part of the capability issue and usage mechanism
- End-to-end encryption needs to be integrated and network protocol interfaces need to be developed

Warnings:

Information:

This Acknowledgement Receipt evidences receipt on the noted date by the USPTO of the indicated documents, characterized by the applicant, and including page counts, where applicable. It serves as evidence of receipt similar to a Post Card, as described in MPEP 503.

New Applications Under 35 U.S.C. 111

If a new application is being filed and the application includes the necessary components for a filing date (see 37 CFR 1.53(b)-(d) and MPEP 506), a Filing Receipt (37 CFR 1.54) will be issued in due course and the date shown on this Acknowledgement Receipt will establish the filing date of the application.

National Stage of an International Application under 35 U.S.C. 371

If a timely submission to enter the national stage of an international application is compliant with the conditions of 35 U.S.C. 371 and other applicable requirements a Form PCT/DO/EO/903 indicating acceptance of the application as a national stage submission under 35 U.S.C. 371 will be issued in addition to the Filing Receipt, in due course.

New International Application Filed with the USPTO as a Receiving Office

If a new international application is being filed and the international application includes the necessary components for an international filing date (see PCT Article 11 and MPEP 1810), a Notification of the International Application Number and of the International Filing Date (Form PCT/RO/105) will be issued in due course, subject to prescriptions concerning national security, and the date shown on this Acknowledgement Receipt will establish the international filing date of the application.

Amendments to the Claims:

1. (Original) A method for transferring rights adapted to be associated with items from a rights supplier to a rights consumer, the method comprising:

obtaining a set of rights associated with an item, the set of rights including meta-rights specifying derivable rights that can be derived from the meta-rights;

determining whether the rights consumer is entitled to the derivable rights specified by the meta-rights; and

deriving at least one right from the derivable rights, if the rights consumer is entitled to the derivable rights specified by the meta-rights, wherein the derived right includes at least one state variable based on the set of rights and used for determining a state of the derived right.

- 2. (Original) The method of claim 1, wherein the state variable inherits a state thereof for content usage or rights transfer from the set of rights.
- 3. (Original) The method of claim 1, wherein the state variable shares a state thereof for content usage or rights transfer with the set of rights.
- 4. (Original) The method of claim 1, wherein the state variable inherits a remaining state for content usage or rights transfer from the set of rights.
- 5. (Original) The method of claim 1, wherein the state variable is updated upon exercise of a right associated with the state variable.
- 6. (Original) The method of claim 1, further comprising deriving a plurality of rights from the derivable rights, wherein the state variable is shared by the derived rights.

Application No. 10/956,121 Docket No. 111325-291300

-3-

7. (Original) The method of claim 1, wherein the state variable represents a collection of states.

8. (Original) The method of claim 1, further comprising a plurality of state variables

that determine the state of the derived right.

9. (Original) The method of claim 1, wherein the at least one state variable is

unspecified in the derived right, is created during a rights transfer, and is assigned to the

derived right.

10. (Original) The method of claim 1, wherein the state variable is transferred from

the derivable rights to the derived right.

11. (Original) The method of claim 1, further comprising generating a license

including the derived right, if the rights consumer is entitled to the derivable rights specified

by the meta-rights.

12. (Original) A system for transferring rights adapted to be associated with items

from a rights supplier to a rights consumer, the system comprising:

means for obtaining a set of rights associated with an item, the set of rights including

meta-rights specifying derivable rights that can be derived from the meta-rights;

means for determining whether the rights consumer is entitled to the derivable rights

specified by the meta-rights; and

means for deriving at least one right from the derivable rights, if the rights consumer is

entitled to the derivable rights specified by the meta-rights, wherein the derived right includes

at least one state variable based on the set of rights and used for determining a state of the

derived right.

- 13. (Original) The system of claim 12, wherein the state variable inherits a state thereof for content usage or rights transfer from the set of rights.
- 14. (Original) The system of claim 12, wherein the state variable shares a state thereof for content usage or rights transfer with the set of rights.
- 15. (Original) The system of claim 12, wherein the state variable inherits a remaining state for content usage or rights transfer from the set of rights.
- 16. (Original) The system of claim 12, wherein the state variable is updated upon exercise of a right associated with the state variable.
- 17. (Original) The system of claim 12, further comprising means for deriving a plurality of rights from the derivable rights, wherein the state variable is shared by the derived rights.
- 18. (Original) The system of claim 12, wherein the state variable represents a collection of states.
- 19. (Original) The system of claim 12, including a plurality of state variables that determine the state of the derived right.
- 20. (Original) The system of claim 12, wherein the at least one state variable is unspecified in the derived right, is created during a rights transfer, and is assigned to the derived right.
- 21. (Original) The system of claim 12, wherein the state variable is transferred from the derivable rights to the derived right.

Application No. 10/956,121 Docket No. 111325-291300

-5-

22. (Original) The system of claim 12, further comprising means for generating a license including the derived right, if the rights consumer is entitled to the derivable rights specified by the meta-rights.

23. (Original) The system of claim 12, wherein the means for obtaining, the means for determining, and the means for deriving comprise at least one of computer-executable instructions, and devices of a computer system.

24. (Original) A device for transferring rights adapted to be associated with items from a rights supplier to a rights consumer, the device comprising:

means for obtaining a set of rights associated with an item, the set of rights including meta-rights specifying derivable rights that can be derived from the meta-rights;

means for determining whether the rights consumer is entitled to the derivable rights specified by the meta-rights; and

means for deriving at least one right from the derivable rights, if the rights consumer is entitled to the derivable rights specified by the meta-rights, wherein the derived right includes at least one state variable based on the set of rights and used for determining a state of the derived right.

- 25. (Original) The device of claim 24, wherein the state variable inherits a state thereof for content usage or rights transfer from the set of rights.
- 26. (Original) The device of claim 24, wherein the state variable shares a state thereof for content usage or rights transfer with the set of rights.
- 27. (Original) The device of claim 24, wherein the state variable inherits a remaining state for content usage or rights transfer from the set of rights.

- 6 - Application No. 10/956,121 Docket No. 111325-291300

28. (Original) The device of claim 24, wherein the state variable is updated upon exercise of a right associated with the state variable.

29. (Original) The device of claim 24, further comprising means for deriving a

plurality of rights from the derivable rights, wherein the state variable is shared by the derived

rights.

30. (Original) The device of claim 24, wherein the state variable represents a

collection of states.

31. (Original) The device of claim 24, including a plurality of state variables that

determine the state of the derived right.

32. (Original) The device of claim 24, wherein the at least one state variable is

unspecified in the derived right, is created during a rights transfer, and is assigned to the

derived right.

33. (Original) The device of claim 24, wherein the state variable is transferred from

the derivable rights to the derived right.

34. (Original) The device of claim 24, further comprising means for generating a

license including the derived right, if the rights consumer is entitled to the derivable rights

specified by the meta-rights.

35. (Original) The device of claim 24, wherein the means for obtaining, the means

for determining, and the means for deriving comprise at least one of computer-executable

instructions, and devices of a computer system.

11077083.1

36. (Original) The device of claim 24, wherein one or more of the means for obtaining, the means for determining, and the means for deriving are specified in a license.

REMARKS

The Office Action of April 15, 2008 has been received and carefully reviewed. Reconsideration of this application in light of the amendment and the allowance of this application are respectfully requested.

Claims 1-36 were pending in the present application prior to the above amendment. In response to the Office Action, no claims have been canceled, no claims have been added, and no claims have been amended. Therefore, claims 1-36 remain pending in the present application and are believed to be in proper condition for allowance.

Double Patenting

In response to the double patenting rejections, Applicants will consider the filing of a Terminal Disclaimer once the application is otherwise in condition for allowance.

Rejections under 35 U.S.C. §103

Claims 1-36 are rejected under 35 U.S.C. §103(a) as allegedly being unpatentable over Anand et al. (U.S. Patent No. 6,044,466) in view of "Workshop on Digital Rights Management, Minutes from Architecture/Infrastructure Session" (hereafter, *Infrastructure*). Applicants fully traverse the rejection as follows.

The present independent claims 1, 12 and 24, and the claims dependent therefrom, are patently distinguishable over *Anand et al.* in view of *Infrastructure*, since *Anand et al.* and *Infrastructure*, either taken alone or in combination, fail to disclose, teach or suggest all of the features recited in the pending claims. For example, independent claim 1 (emphasis added), recites:

A method for transferring rights adapted to be associated with items from a rights supplier to a rights consumer, the method comprising:

obtaining a set of rights associated with an item, the set of rights including meta-rights specifying derivable rights that can be derived from the meta-rights;

determining whether the rights consumer is entitled to the derivable rights specified by the meta-rights; and

deriving at least one right from the derivable rights, if the rights consumer is entitled to the derivable rights specified by the meta-rights,

wherein the derived right includes at least one state variable based on the set of rights and used for determining a state of the derived right.

Independent claim 12 (emphasis added), recites:

A system for transferring rights adapted to be associated with items from a rights supplier to a rights consumer, the system comprising:

means for obtaining a set of rights associated with an item, the set of rights including meta-rights specifying derivable rights that can be derived from the meta-rights;

means for determining whether the rights consumer is entitled to the derivable rights specified by the meta-rights; and

means for deriving at least one right from the derivable rights, if the rights consumer is entitled to the derivable rights specified by the meta-rights, wherein the derived right includes at least one state variable based on the set of rights and used for determining a state of the derived right.

Independent claim 24 (emphasis added), recites:

A device for transferring rights adapted to be associated with items from a rights supplier to a rights consumer, the device comprising:

means for obtaining a set of rights associated with an item, the set of rights including meta-rights specifying derivable rights that can be derived from the meta-rights;

means for determining whether the rights consumer is entitled to the derivable rights specified by the meta-rights; and

means for deriving at least one right from the derivable rights, if the rights consumer is entitled to the derivable rights specified by the meta-rights, wherein the derived right includes at least one state variable based on the set of rights and used for determining a state of the derived right.

Thus, independent claims 1, 12 and 24 are directed to the novel features of obtaining or means for obtaining a set of rights associated with an item, the set of rights including metarights specifying derivable rights that can be derived from the meta-rights, and deriving at least one right from the derivable rights, if the rights consumer is entitled to the derivable rights specified by the meta-rights, wherein the derived right includes at least one state variable based on the set of rights and used for determining a state of the derived right.

Applicants respectfully submit that the present independent claims 1, 12 and 24 are patentably distinguishable over *Anand et al.* and *Infrastructure*, taken alone or in

combination. Specifically, *Anand et al.* does not disclose obtaining a set of rights associated with an item, the set of rights including meta-rights specifying derivable rights that can be derived from the meta-rights, and deriving at least one right from the derivable rights, if the rights consumer is entitled to the derivable rights specified by the meta-rights, wherein the derived right includes at least one state variable based on the set of rights and used for determining a state of the derived right, as recited in independent claim 1. *Anand et al.* also does not disclose means for obtaining a set of rights associated with an item, the set of rights including meta-rights specifying derivable rights that can be derived from the meta-rights, and means for deriving at least one right from the derivable rights, if the rights consumer is entitled to the derivable rights specified by the meta-rights, wherein the derived right includes at least one state variable based on the set of rights and used for determining a state of the derived right, as recited in independent claims 12 and 24.

In the device disclosed by *Anand et al.*, "a dynamic derivation mechanism enables permissions to be dynamically and flexibly derived for executables based upon their authenticated description" (see *Anand et al.*, e.g., col. 3, lns. 15-31), and is to perform the operations described by the permissions on objects (see *Anand et al.*, e.g., col. 3, lns. 40-42). The permissions of *Anand et al.* are associated with an executable, which is a subject or principal (see *Anand et al.*, e.g., col. 3, lns. 15-31).

By contrast, a derivable right of the invention of present independent claims 1, 12 and 24 is specified within meta-rights associated with an item (or an "object" in the terms of *Anand et al.*), whereas *Anand et al.* has no corresponding notion of meta-rights and only and always provides maximal permission in some site security policy for a derivation instance. Col. 5, lines 1-23 of *Anand et al.* which the Examiner cites as allegedly disclosing the meta-rights of the present invention, recites:

As FIG. 2 depicts, the derivation mechanism (100) consists of the following five steps: (1) create a derivation instance (200) for this content description (120) and downloading principal (110); (2) retrieve the current and maximal permissions propositions (210) from the site security policy (130) for the derivation instance (160); (3) derive the maximal permissions (150) from the contributions of each principal in the maximal permission proposition (220); (4) obtain the current permissions contributions (230) delegated by each principal in the current permission proposition (300), as illustrated in FIG. 3; and (5) compute the current and maximal permissions (140,150,240) using the current and maximal permissions propositions (300,310) and the current and maximal contributions (230,220) of the propositions' principals. The current permissions (150), by definition, must always be a subset of the maximal permis- 15 sions (140).

The description of executable content (120) is a set of attribute-value pairs. One possible embodiment is RDF ("Resource Description Framework") labels that describe the meta-data of a website's URI ("Universal Resource 20 Identifier"). RDF is a Web Consortium Activity (see http://www.w3.org/metadata/RDF/overview.html). Attributes with string values can be used to describe a URI.

Thus, as seen above, *Anand et al.* does not control or regulate who is entitled to derive right through meta-rights, as in the present invention, and moreover is <u>completely silent</u> with regard to "meta-rights specifying derivable rights that can be derived from the meta-rights", as substantially recited in independent claims 1, 12 and 24.

Additionally, since *Anand et al.* fails to disclose, teach or suggest any notion of metarights, it follows that *Anand et al.* cannot disclose, teach or suggest a step of determining whether the rights consumer is entitled to the derivable rights specified by the meta-rights in col. 5, lns. 14-21 as alleged by the Examiner. In fact, col. 5, lns. 14-21 of *Anand et al.* actually recites:

sitions' principals. The current permissions (150), by definition, must always be a subset of the maximal permissions (140).

The description of executable content (120) is a set of attribute-value pairs. One possible embodiment is RDF ("Resource Description Framework") labels that describe the meta-data of a website's URI ("Universal Resource 20 Identifier"). RDF is a Web Consortium Activity (see

Thus, as seen from the above passage, *Anand et al.* is <u>completely silent</u> with regard to meta-rights that control or regulate who is entitled to derive rights through meta-rights, and more specifically to a step of determining whether the rights consumer is entitled to the derivable rights specified by the meta-rights, as disclosed in independent claims 1, 12 and 24. Instead, *Anand et al.* merely discloses that the current permissions will always be a subset of the maximal permission, which is <u>clearly distinct</u> from the derivation of rights through meta-rights.

Moreover, as seen from Figure 1 and its corresponding description on col. 4, lns. 51-60 of *Anand et al.*, it is clear that the permission derivation is always customized for the downloaded content and downloading principle according to a site security policy (see *Anand et al.*, the derivation instance in steps (1) and (2) on col. 5, lns. 1-16). Additionally, the derivation does not depend on whether or not a rights consumer (e.g., either the downloaded content or the downloading principal) is entitled to those rights or permissions. Consequently, the derivation of *Anand et al.* always ends up with two sets of permissions: a current permission and maximal permission.

Furthermore, as seen in col. 5, lns. 1-16 of *Anand et al.*, the derivation involves dynamical information such as "current permission contributions (230) delegated by each principal in the current permission proposition". Thus, *Anand et al.* cannot disclose that derivable rights specified by the meta-rights, wherein the derived rights include at least one state variable based on the set of rights and used for determining a state of the derived right, as purported by the Examiner.

The Examiner correctly admits that *Anand et al.* fails to disclose, teach or suggest a state variable (see the first paragraph on page 5 of the Office Action dated April 15, 2008),

and relies on page 8, paragraph 3 of *Infrastructure* for disclosing this feature. However, Applicants respectfully submit that *Infrastructure* also fails to disclose, teach or suggest a state variable, as is recited in the claims, and fails to make up for the deficiencies of *Anand et al.*

Infrastructure, page 8, paragraph 3 recites (emphasis added):

John Erickson (HP): An event model is powerful, because it allows description of certain rights relationships that we might think of in terms of electronic contracts. If we speak about rights languages, we can imagine a lot of different types of transactions. There are things that need to be declared, between an author and a publisher. It is a dynamic activity with lots of outcomes that the event model can characterize. The event model is the basis of an ontology. we need different vocabularies for different purposes. A contract between an author and a publisher is like a dynamic state machine. The event model is a powerful way to express that Things like rights vouchers/licenses and output of individual states are dependant on dynamic events.

Applicants would like to note that *Infrastructure* is <u>completely silent</u> with regard to a method or a system for transferring rights adapted to be associated with items, but rather is merely a transcribed copy of the minutes taken from an open forum discussion group regarding ideas and definitions of DRM, and not a method or system for transferring rights, as in the present invention.

Specifically, *Infrastructure* mentions that "[a] contract between an author and a publisher is like a dynamic state machine" (see *Infrastructure*), which in actuality is only directed to the *behavior of a contract*, and not the contract itself. Thus, the contract of *Infrastructure* cannot be *used for determining a state of the derived right*, as substantially recited by independent claims 1, 12 and 24.

Furthermore, Applicants respectfully submit that the notion of a dynamic state machine, as described in the above cited passage of *Infrastructure*, and the notion of a state variable are unrelated ideas. Applicants respectfully submit that a state machine <u>by definition</u> may not have any state variables, although it can have many concrete states.

Application No. 10/956,121 Docket No. 111325-291300

-14-

Thus, at least for the reasons stated above, neither *Anand et al.* nor *Infrastructure*, taken alone or in combination, disclose, teach or suggest the claimed features recited in independent claims 1, 12 and 24.

The dependent claims are allowable at least by virtue of their dependency from one of the independent claims, but are also distinguishable over the prior art.

In view of the foregoing, it is submitted that the present application is in condition for allowance and a notice to that effect is respectfully requested. However, if any issue remains after considering this response, the Examiner is invited to call the undersigned to expedite the prosecution and work out any such issue by telephone.

Except for issue fees payable under 37 C.F.R. § 1.18, the Commissioner is hereby authorized by this paper to charge any additional fees during the entire pendency of this application including fees due under 37 C.F.R. §§ 1.16 and 1.17 which may be required, including any required extension of time fees, or credit any overpayment to Deposit Account No. 19-2380. This paragraph is intended to be a **CONSTRUCTIVE PETITION FOR EXTENSION OF TIME** in accordance with 37 C.F.R. § 1.136(a)(3).

Respectfully submitted,

Date: July 14, 2008

Introduction

One of the ways to protect intellectual property on the NREN is through a digital library concept. Under this concept, a work would have attached to it a "permissions header," defining the terms under which the copyright owner makes the work available. The digital library infrastructure, implemented on the NREN, would match request messages from users with the permissions headers. If the request message and the permissions header match, the user would obtain access to the work. This concept encompasses major aspects of electronic contracting, which is already in wide use employing Electronic Data Interchange ("EDI") standards developed by ANSI Committee X12.1

This paper explains the relationship between the digital library concept and EDI practice, synthesizing appropriate solutions for contract law, evidence, and agency issues that arise in electronic contracting. The question of how electronic signatures should work to be legally effective is an important part of this inquiry. The paper also defines particular types of service identifiers, header descriptors, and other forms of labeling and tagging appropriate to allow copyright owners to give different levels of permission, including outright transfer of the copyright interest, use

permission, copying permission, distribution permission, display permission, and permission to prepare derivative works. The paper considers how payment authorization procedures should work in conjunction with a permissions header and digital library concept in order to integrate the proposed copyright licensing procedures with existing and anticipated electronic payment authorization systems. The paper necessarily considers whether existing standards approaches related to SGML and X12 are sufficient or whether some new standards development efforts will be necessary for implementation of the concepts. The paper considers the relationship between technology and law in enforcing intellectual property, and emphasizes that the traditional adaptation of legal requirements to levels of risk is appropriate as the law is applied to new technologies.

There are certain common issues between the intellectual property question and other applications of wide area digital network technology. The question of signatures and writings to reflect the establishment of duties and permissions and the transfer of rights is common to the intellectual property inquiry and to electronic commerce using EDI techniques. There also are common questions involving rights to use certain information channels: First Amendment privileges, and tort liability. These are common not only to technological means of protecting intellectual property but to all forms of wide area networking.

The problem

The law recognizes intellectual property because information technology permits one person to get a free ride on another person's investment in creating information value. Creative activity involving information usually is addressed by copyright, although patent has a role to play in protecting innovative means of processing information.2

Intellectual property arose in the context of letterpress printing technology. Newer technologies like xerography and more recently small computer technology and associated word processing and networking have increased the potential for free rides and accordingly increased the pressure on intellectual property.

The concern about free ride potential is especially great when people envision putting creative works on

electronic publishing servers connected to wide area networks intending to permit consumers of information products to access these objects, frequently combining them and generally facilitating "publishing on demand" rather than the well known publishing just in case, typified by guessing how many copies of a work will sell, printing those in advance, and then putting them in inventory until someone wants them.

The concern is that it will be too easy to copy an entire work without detection and without paying for it. Worse, it will be easy to copy an entire work and resell it either by itself or as a part of a new derivative work or collection.

But technology is capable of protecting investment in new ways as well as gaining a free ride. Computer networks make it possible to restrict access and to determine when access occurs. Depending on how new networks are designed, they may actually reduce the potential for a free ride. The digital library is one way of realizing that potential. Professor Pamela Samuelson has observed that the digital library model replaces intellectual property with a system of technological controls.3

Digital Library Concepts Basic Concepts

A digital library is a set of information resources ("information objects") distributed throughout an electronic network. The objects reside on servers (computers with associated disk drives connected to the network). They can be retrieved remotely by users using "client" workstations. Origin of Concepts

The phrase "digital library" and the basic concept was first articulated in a 1989 report growing out of a workshop sponsored by the Corporation for National Research Initiatives.4 From its inception, the digital library concept envisioned retrieval of complete information resources and not merely bibliographic information.5

The technologies of remote retrieval of complete information objects using electronic technologies is in wide use through the WESTLAW, Dialog, LEXIS, NEXIS, and National Library of Medicine databases. These remotely accessible

databases, however, unlike the digital library involved a single host on which most of the data resides. The digital library concept envisions a multiplicity of hosts (servers). Recent Developments

The remotely accessible database host concept is converging with the digital library concept as more of the electronic database vendors provide gateways to information objects actually residing on other computers. This now is commonplace with WESTLAW access to Dialog, and Dialog's gateways to other information providers.

The most explicit implementation of the digital library concept is the Wide Area Information Service ("WAIS"), which implements ANSI standard Z.39.6 WAIS permits a remote user to formulate a query that is applied to a multiplicity of WAIS servers each of which may contain information responsive to the query. The WAIS architecture permits search engines of varying degrees of sophistication, resident on WAIS information servers to apply the query against their own information objects, reporting matches back to the user.7 Future implementations of WAIS permit automatic refinement of searches according to statistical matching techniques.

The Corporation for National Research Initiatives has proposed a test bed for an electronic copyright management system.8 The proposed system would include four major elements: automated copyright recording and registration, automated, on line clearance of rights, private electronic mail and digital signatures to provide security. It would include three subsystems: a Registration and Recording System (RRS), a Digital Library System (DLS), and a Rights Management System (RMS). The RRS would provide the functions enumerated above and would be operated by the Library of Congress. It would provide "change of title" information.9 The RMS would be an interactive distributed system capable of granting rights on line and permitting the use of copyrighted material in the Digital Library System. The test bed architecture would involve computers connected to the Internet performing the RRS and RMS functions.

Digital signatures would link an electronic bibliographic record with the contents of the work, ensuring against alteration after deposit. 10 Multiple RMS servers would be attached to the Internet. A user wishing to obtain

rights to an electronically published work would interact electronically with the appropriate RMS. When copyright ownership is transferred, a message could be sent from the RMS to the RRS11 - creating an electronic marketplace for copyrighted material.

The EBR submitted with a new work would "identify the rights holder and any terms and conditions on the use of the document or a pointer to a designated contact for rights and permissions."12 The EBR, thus, is apparently equivalent to the permissions header discussed in this paper. Security in the transfer of rights would be provided by digital signatures using public key encryption, discussed further, infra in the section on encryption.

Basic Architectural Concepts

The digital library concept in general contemplates three basic architectural elements: a query, also called a "knowbot" in some descriptions; a permissions header attached to each information object; and a procedure for matching the query with the permissions header.

Two kinds of information are involved in all three architectural elements: information about the content of information objects desired and existing, and information about the economic terms on which an information object is made available. For example, a query desiring court opinions involving the enforcement of foreign judgments evidencing a desire to download the full text of such judicial opinions and to pay up to \$1.00 per minute of search and downloading time would require that the knowbot appropriately represent the subject matter "enforcement of foreign judgments." It also requires that the knowbot appropriately represent the terms on which the user is willing to deal: downloading and the maximum price. The permissions header similarly must express the same two kinds of information. If the information object to which the permissions header is attached is a short story rather than a judicial opinion, the permissions header must so indicate. Or, if the information object is a judicial opinion and it is about enforcement of foreign judgments, the permission header may indicate that only a summary is available for downloading at a price of \$10.00 per minute. The searching, matching, and retrieval procedure in the digital library system must be capable of determining whether there is a match on both subject matter and economic terms, also copying and

transmitting the information object if there is a match. Comparison to EDI

Electronic Data Interchange ("EDI") is a practice involving computer-to-computer commercial dealing without human intervention. In the most widespread implementations, computers are programmed to issue purchase orders to trading partners, and the receiving computer is programmed to evaluate the terms of the purchase order and to take appropriate action, either accepting it and causing goods to be manufactured or shipped or rejecting it and sending an appropriate message. EDI is in wide use in American and foreign commerce, using industry-specific standards for discrete commercial documents like purchase orders, invoices, and payment orders, developed through the American National Standards Institute.

There obviously are similarities between the three architectural elements of the digital library concept and EDI. There is a structured way of expressing an offer or instruction, and a process for determining whether there is a match between what the recipient is willing to do and what the sender requests.

There is also, however, an important difference. In the digital library concept, a match results in actual delivery of the desired goods and services in electronic form. In EDI practice, the performance of the contractual arrangement usually involves physical goods or performance of nonelectronic services.

Nevertheless, the digital library and EDI architectures are sufficiently similar and, it turns out the legal issues associated with both are sufficiently similar to make analogies appropriate.

Elements of Data Structure

For purposes of this paper, the interesting parts of the data structure are those elements that pertain to permission, more than those elements that pertain to content of the information object to which the header is attached. Accordingly, this section will focus on only permissions-related elements, after noting in passing that the content part of the header well might be a pointer to an inverted file to permit full text searching and matching.

The starting point conceptually for identifying the elements of the permissions header are the rights exclusively reserved to the copyright owner by 106 of the copyright statute. But these exclusive rights need not be tracked directly because the owner of an information object free to impose contractual restrictions as well as to enjoy rights granted by the Copyright Act. Accordingly, it seems that the following kinds of privileges in the requester should be addressed in the permissions header:

outright transfer of all rights

use privilege, either unrestricted or subject to restrictions

copying, either unlimited or subject to restrictions like quantitative limits

distribution, either unlimited or subject to restrictions, like geographic ones or limits on the markets to which distribution can occur

preparation of derivative works

Display and presentation rights, separately identified in 106 would be subsumed into the use element, because they are particular uses.

The simplest implementation would allow only binary values for each of these elements. But a binary approach does not permit the permissions header to express restrictions, like those suggested in the enumerated list. Elements could be defined to accept the most common kinds of restrictions on use, and quantitative limits on copying, but it would be much more difficult to define in advance the kinds of geographic or market-definition restrictions that an owner might wish to impose with respect to distribution.

In addition to these discrete privileges, the permissions header must express pricing information. The most sensible way of doing this is to have a price associated with each type of privilege. In the event that different levels of use, copying, or distribution privilege are identified, the data structure should allow a price to be associated with each level.

A complicating factor in defining elements for price is the likelihood that different suppliers would want to price differently. For example, some would prefer to impose a flat fee for the grant of a particular privilege. Others might wish to impose a volume-based fee, and still others might wish to impose a usage or connect-time based fee. The data structure for pricing terms must be flexible enough to accommodate at least these three different approaches to pricing.

Finally, the data structure must allow for a specification of acceptable payment terms and have some kind of trigger for a payment approval procedure. For example, the permissions header might require presentation of a credit card number and then trigger a process that would communicate with the appropriate credit card database to obtain authorization. Only if the authorization was obtained would the knowbot and the permissions header "match."

There is a relationship between the data structures and legal concepts. The knowbot is a solicitation of offers. The permissions header is an offer. The matching of the two constitutes an acceptance. Mr. Linn's "envelope" could be the "contract."

There are certain aspects of the data structure design that are not obvious. One is how to link price with specific levels of permission. Another is how to describe particular levels of permission. This representation problem may benefit from the use of some deontic logic, possibly in the form of a grammar developed for intellectual property permissions. Finally, it is not clear what the acceptance should look like. Conceptually, the acceptance occurs when the knowbot matches with a permissions header, but it is unclear how this legally significant event should be represented.

Role of Encryption

The CNRI test bed proposal envisions the use of public key encryption to ensure the integrity of digital signatures and to ensure the authenticity of information objects. Public key encryption permits a person to encrypt a message - like a signature using a secret key, one known only to the sender, while permitting anyone with access to a public key

to decrypt it. Use of public key cryptography in this fashion permits any user to authenticate a message, ensuring that it came from the purported sender.13 A related technology called "hashing" permits an encrypted digital signature to be linked to the content of a message. The message can be sent in plain text (unencrypted) form, but if any part of it is changed, it will not match the digital signature. The digital signature and hashing technologies thus permit not only the origin but also the content integrity of a message of arbitrary length to be authenticated without necessitating encryption of the content of the message. This technology has the advantage, among others, that it is usable by someone lacking technological access to public key encryption. An unsophisticated user not wishing to incur the costs of signature verification nevertheless can use the content of the signed information object.

It is well recognized that encryption provides higher levels of security than other approaches. But security through encryption comes at a price. Private key encryption systems require preestablished relationships and exchange of private keys in advance of any encrypted communication. The burdens of this approach have led most proponents of electronic commerce to explore public key encryption instead. But public key systems require the establishment and policing of a new set of institutions. An important infrastructure requirement for practicable public key cryptography is the establishment and maintenance of certifying entities that maintain the public keys and ensure that they are genuine ones rather than bogus ones inserted by forgers. A rough analogy can be drawn between the public key certifying entities and notaries public. Both kinds of institutions verify the authenticity of signature. Both kinds require some level of licensing by governmental entities. Otherwise the word of the "electronic notary" (certifying entity) is no better than an uncertified, unencrypted signature. In a political and legal environment in which the limitations of regulatory programs have been recognized and have led to deregulation of major industries, it is not clear that a major new regulatory arrangement for public key encryption is practicable. Nevertheless, experimentation with the concept in support of digital library demonstration programs can help generate more empirical data as to the cost and benefits of public key encryption to reinforce electronic signatures.

On the other hand, it is not desirable to pursue approaches requiring encryption of content. No need to encrypt the contents is apparent in a network environment. Database access controls are sufficient to prevent access to the content if the permissions header terms are not matched by the knowbot. On the other hand, if the electronic publishing is effected through CDROMs or other physical media possessed by a user, then encryption might be appropriate to prevent the user from avoiding the permissions header and going directly to the content.

While encrypted content affords greater security to the owner of copyrighted material. Someone who has not paid the price to the copyright owner must incur much higher cost to steal the material. But the problem is everyone must pay a higher price to use the material. One of the dramatic lessons of the desktop computer revolution was the clear rejection of copyright protection in personal computer software. The reasons that copy protection did not survive in the market place militate against embracing encryption for content. Encryption interferes with realization of electronic markets, because producer and consumer must have the same encryption and description protocols. Encryption burdens processing of electronic information objects because it adds another layer. Some specific implementations have encryption require additional hardware at appreciable costs.

Digital libraries cannot become a reality until consumers perceive that the benefits of electronic formats outweigh the costs, compared to paper formats. Encryption interferes with electronic formats' traditional advantages of density, reusability, editability, and computer search ability and also, by impairing open architectures may perpetuate some of papers' advantages with respect with browsibility.14

The need for encryption of any kind depends upon whether security is available without it. That depends, in turn, on the kinds of free rides that may be obtainable and the legal status of various kinds of electronics transactions in the digital library system.

Legal Issues

Copyright: What legal effect is intended?

The design of the permissions header and the values in the elements of the header must be unambiguous as to whether an outright transfer of a copyright interest is intended or whether only a license is intended. If an outright transfer15 is intended, then the present copyright statute requires a writing signed by the owner of the rights conveyed.16 Recordation of the transfer with the Copyright office is not required, but provides advantages in enforcing transferee rights.17 On the other hand, non exclusive licenses need not be in writing nor registered. If the electronic transaction transfers the copyright in its entirety, then the rights of the transferor are extinguished, and the rights of the transferee are determined by the copyright statute. The only significant legal question is whether the conveyance was effective.

On the other hand, when the copyright is not transferred outright but only certain permissions are granted or certain rights conveyed, the legal questions become more varied. Then, the rights of the transferor and the obligations of the transferee are matters of contract law. It is important to understand the degree to which the contract is enforceable and how it is to be interpreted in the event of subsequent disputes. The following sections consider briefly the first sale doctrine as a potential public policy obstacle to enforcing contractual restrictions different from those imposed by the copyright statute and then explore in greater depth whether electronic techniques satisfy the formalities traditionally required for making a contract, whether they adequately ensure against repudiation, and whether they provide sufficient information to permit predictable interpretation of contractual obligations and privileges.

First Sale Doctrine

The first sale doctrine may invalidate restrictions on use. It is impermissible for the holder of a patent to impose restrictions on the use of a patented product after the product has been sold. Restrictions may be imposed, however, on persons who merely license the product.18 The rationale for this limit on the power of the owner of the intellectual property interest is that to allow limitations on use of the product would interfere with competition beyond what the Congress - and arguably the drafters of the Constitution - intended in setting up the patent system.

The first sale doctrine applies to copyright owners.19 Indeed, because of the First Amendment's protection of informational activity, the argument against restrictions after the first sale may be even stronger in the copyright arena then in the patent arena.

The first sale doctrine is potentially important because it may invalidate restrictions imposed on the use of information beyond what is authorized by the Copyright Act and by common law trade secret. Thus, there may be serious questions about the legal efficacy of use restrictions suggested in _____, although such restrictions are common in remote database service agreements. The vendors could argue that the limitations pertain to the contractual terms for delivery of a service rather than use of information as such. The characterization avoids the overlap with copyright and thus may also avoid the conflict between federal policy and contract enforcement.20 Contract Formation Issues

The law does not enforce every promise. Instead, it focuses its power only on promises surrounded with certain formalities to make it likely that the person making the promise (the "promisor") and the person receiving the promise (the "promisee") understood that their communication had legal consequences. A threshold question for the digital library system is whether the traditional formalities for making a contract are present when the contract is made through electronic means. The digital library system considered in this paper clearly contemplates that a contract is formed when the knowbot and the permissions header achieve a match. In this respect, the digital library concept converges with EDI where trading parties contemplate that a contract to perform services or deliver goods is formed when a match occurs either upon the receipt of a purchase order or upon the transmission of a purchase order acknowledgment.

It is not altogether clear, however, whether the match between values and computer data structures meets contract formation requirements, particularly those expressed in various statutes of frauds. Statutes of frauds require "writings" and "signatures" for certain kinds of contracts basically those contemplating performance extending beyond a period of one year.21 In many instances, the digital library contract will be fully performed almost instantaneously upon delivery of the information object after the knowbot and the permissions header match. In such a case, the statute of frauds is not a problem and its requirements need not be satisfied. In other cases, however, as when the intent of the owner of the information object is to grant a license to do things that will extend beyond one year, the statute of frauds writing and signature requirements must be met.

Historical application of Statutes Of Frauds by the courts clearly indicates that there is flexibility in the meaning of "writing" and "signature." A signature is any mark made with the intent that it be a signature.22 Thus an illiterate person signs by making an "X," and the signature is legally effective. Another person may sign a document by using a signature stamp. Someone else may authorize an agent to sign his name or to use the signature stamp. In all three cases the signature is legally effective. There may of course be arguments about who made the X, or whether the person applying the signature stamp was the signer or his authorized agent, but these are evidentiary and agency questions, not arguments about hard and fast contract-law requirements.

Under the generally accepted legal definition of a signature, there is no legal reason why the "mark" may not be made by a computer printer, or for that matter by the write head on a computer disk drive or the data bus in a computer random access memory. The authorization to the computer agent to make the mark may be given by entering a PIN ("Personal Identification Number") on a keyboard. To extend the logic, there is no conceptual reason to doubt the legal efficacy of authority to make a mark if the signer writes a computer program authorizing the application of a PIN upon the existence of certain conditions that can be tested by the program. The resulting authority is analogous to a signature pen that can be operated only with a mechanical key attached to somebody's key ring, coupled with instructions to the possessor of the key.

Which of these various methods should be selected for particular types of transactions must depend, not on what the law requires, because the law permits any of these methods. Rather, it must depend on the underlying purposes of the legal requirement and which method best serves those

purposes.

The real issue is how to prove that a particular party made the mark. In other words, the contingency to be concerned about is repudiation, not absence of formalities. Repudiation should be dealt with through usual evidentiary and fact finding processes rather than artificial distinctions between signed and unsigned documents.

Authority is skimpier on how flexible the "writing" requirement is. The best approach is to borrow the fixation idea from the copyright statute and conclude that a writing is "embodiment in a copy . . . sufficiently permanent or stable to permit it to be perceived, reproduced, or otherwise communicated for more a period of more than transitory duration."23

The most important thing conceptually is to understand the purpose of the writing and signature requirements. They have two purposes: awareness or formality and reliability of evidence. Signature requirements, like requirements for writings and for original documents have an essentially evidentiary purpose. If there is a dispute later, they specify what kind of evidence is probative of certain disputed issues, like "who made this statement and for what purpose?" The legal requirements set a threshold of probativeness. Surely the values in a knowbot as well as the values in a permissions header constitute and "mark," and someone who knowingly sets up potential transactions in a digital library scheme can have the intent that the mark be a signature.

When a contract is made through a signed writing, it is more likely that the parties to the contract understand what they are doing. They are aware of the legal affect of their conduct because the writing in the signature involve a greater degree of formality than a simple conversation.

The awareness/formality purpose can be served by computerized contracting systems. This is so not so much because the computers are "aware" of the affect of their "conduct." Rather, it is true because the computers are agents of human principals. The programming of the computer to accept certain contract terms is the granting of authority to the computer agent to enter into a contract. The fact that a principal acts through an agent engaging in

conduct at a later point and time never has been thought to defeat contract formation in the traditional evolution of agency and contract law. Nor should it when the agent is a computer.

Fulfillment of the evidentiary purpose depends on the reliability of the information retained by the computer systems making up the digital library. Such systems must be designed to permit the proponent of contract formation to establish the following propositions if the other party to the purported contract attempts to repudiate it.

- 1.It came from computer X
- 2.It accurately represents what is in computer X24 now25
 - 3. What is in computer X now is what was in computer X at the time of the transaction
- 4. What was in computer X at the time of the transaction is what was received from the telecommunications channel 26
- 5. What was received from the telecommunications channel is what was (a) sent, (b) by computer Y.

Two other questions relate to matters other than the authenticity of the message:

- 6 Computer Y was the agent of B
- 7 The message content expresses the content of the contract (or more narrowly, the offer or the acceptance).27

Factual propositions 1-4 can be established by testimony as to how information is written to and from telecommunications channel processors, primary storage, and secondary storage. Factual proposition 5 requires testimony as to the accuracy of the telecommunications channel and characteristics of the message that associate it with computer Y. Only the last proposition (number 5) relates to signatures, because signature requirements associate the message with its source.28 The other propositions necessitate testimony as to how the basic message and database management system works. It is instructive to compare these

propositions with the kinds of propositions that must be established under the business records exception to the hearsay rule when it is applied to computer information.

Those propositions may be supported with non technical evidence, presented by non programmers. A witness can lay a foundation for admission of computer records simply by testifying that the records are generated automatically and routinely in the ordinary course of business. The more inflexible the routine, and the less human intervention in the details of the computer's management of the database the better the evidence.29

The ultimate question is trustworthiness, and if the computer methods are apparently reliable, the information should be admitted unless the opponent of admissibility can raise some reasonable factual question undercutting trustworthiness.30

Contract Interpretation Issues

Assuming that the permissions header and knowbot constitute sufficient writings to permit a contract to be formed and that the signature requirement also is met, through digital signature technology or otherwise, there still are difficult contract interpretation questions. Contract interpretation questions arise not only after contractual relationships are formed, but also in connection with deciding whether there has been offer and acceptance, the prerequisites to contract formation.31 Contract interpretation always seeks to draw inferences about what the parties intended. When contract interpretation issues arise at the contract formation stage, the questions are what the offeror intended the content of the offer to be and what the offeree intended the content of the purported acceptance to be. The proposed Digital Library System envisions extremely cryptic expressions of offer and acceptance - by means of codes. The codes have no intrinsic meaning. Rather, extrinsic reference must be made to some kind of table, standard, or convention associating particular codes with the concepts they represent. Extrinsic evidence is available to resolve contract interpretation questions when the language of the contract itself is ambiguous, and perhaps at other times as well.32 The codes in the permissions header and knowbots certainly are ambiguous and become unambiguous only when extrinsic evidence is considered. So there is no problem in getting a standard or

cable into evidence. The problem is whether the parties meant to assent to this standard.

In current EDI practice, this question is resolved by having parties who expect to have EDI transactions with each other to sign a paper trading partner agreement, in which the meaning of values or codes in the transaction sets is established.33 But requiring each pair of suppliers and users of information in a digital library to have written contracts with each other in advance would defeat much of the utility of the digital library. Thus the challenge is to establish some ground rules for the meaning of permissions header and knowbot values that all participants are bound by. There are analogous situations. One is a standard credit card agreement that establishes contractual terms among credit card issuer, credit card subscriber, and merchant who accepts the credit card. The intermediary - the credit card company - unilaterally establishes contract terms to which the trading partners assent by using and accepting the credit card.34 Also, it is widely recognized that members of a private association can, through their constitution and bylaws establish contractual relationships that bind all of the members in dealing with each other.35 In the Digital Library System, similar legal arrangements can establish the standards by which electronic transactions between permissions header and knowbots will bind transferor and transferee of information.

Third Party Liability

It is not enough merely to ensure that the licensee is contractually bound. Trading partners also must ensure that the participants in funds transfers have enforceable obligations. For example, if the digital library system envisions that the information object would not be released to the purchaser without simultaneous release of a payment order, the supplier may be interested in enforcing the obligations of financial intermediaries who handle the payment order. This implicates the federal Electronic Funds Transfer Act, and Article 4A of the Uniform Commercial Code, regulating wire transfers.

Solutions

Satisfy the Business Records Exception to the Hearsay Rule

The discussion of contract formalities earlier in this

paper concluded that legally enforceable contracts can be formed through electronic means and that the significant legal questions relate to reliability of proof and intent of the parties to be bound by using the electronic techniques. This section considers the reliability of proof further. Traditional evidence law permits computer records to be introduced in evidence when they satisfy the requirements of the business records exception: basically that they are made in the ordinary course of business, that they are relied on for the performance of regular business activities, and that there is no independent reason for questioning their reliability.36

The business records exception shares with the authentication concept statute of frauds and the parol evidence rule a common concern with reliability.37 The same procedural guarantees and established practices that ensure reliability for hearsay purposes also ensure reliability for the other purposes. Under the business records exception, the proponent must identify the source of a record, through testimony by one familiar with a signature on the record, or circumstantially.38 The steps in qualifying a business record under the common law, which since have been relaxed,39 were:

Proving that the record is an original entry made in the routine course of business

Proving that the entries were made upon the personal knowledge of the proponent/witness or someone reporting to him

Proving that the entries were made at or near the time of the transaction

Proving that the recorder and his informant are unavailable.40

These specific requirements are easier to understand and to adapt to electronic permissions and obligations formed in a digital library system by understanding the rationale for the business records exception. The hearsay rule excludes out of court statements because they are inherently unreliable, primarily because the maker of the statement's demeanor cannot be observed by the jury and because the maker of the statement is not subject to cross examine. On the other hand, there are some out of court statements that

have other guarantees of reliability. Business records are one example. If a continuing enterprise finds the records sufficiently reliable to use them in the ordinary course of business, they should be reliable enough for a court. The criteria for the business records exception all aim at ensuring that the records really are relied upon the business to conduct its ordinary affairs.

The Manual for Multidistrict Litigation suggests steps for qualifying computer information under the business records exception:

- 1. The document is a business record
- 2. The document has probative value
- 3. The computer equipment used is reliable
- 4. Reliable data processing techniques were used 41

The key in adapting the business records exception to electronic permissions in a digital library system are points 3 and 4. Establishing these propositions and the propositions set forth in section ____ of this paper requires expert testimony. Any designer of a digital library system must consult with counsel and understand what testimony an expert would give to establish these propositions. Going through that exercise will influence system design.

Reinforce the Evidentiary Reliability by Using Trusted Third Parties

The evidentiary purpose of contract formation requirements can be satisfied by using a trusted third party as an intermediary, when the third party maintains archival records of the transactions. The third party lacks any incentive for tampering with the records and when the third parties archiving system is properly designed, it can provide evidence sufficient to establish all of the propositions identified in

This third party intermediary concept is somewhat different from the concept for a certifying agent in digital signature systems. To be sure, the custodian of transaction records envisioned by this section could be the same as the certifying entity for public and key encryption, but the custodian role can be played in the absence of any

encryption. Indeed, the digital library itself is a good candidate for the custodian role. The library has no incentive to manipulate its records in favor of either of the producers of information value or the consumers. In order to carry out its affairs, it must use these transactional records in the ordinary course of business, thereby making it likely that digital library records would qualify under the business records exception.

Standardization

Obviously, the digital library concept depends upon the possibility of an automated comparison between the knowbot and the permissions header. This means that potential requesters of information and suppliers of information must know in advance the data structures for representing the elements of the permissions header and the knowbot. This requires compatibility. Compatibility requires standardization. Standardization does not, however, necessarily require "Standard" in the sense that they are developed by some bureaucratic body like ANSI. It may simply imply market acceptance of a particular vendor's approach. Indeed, each digital library might use different data structures. All that is necessary is that the structure of the knowbot and the structure of the permissions header be compatible within any one digital library system. Also, as demands emerge for separate digital libraries to communicate with each other, there can be proprietary translation to assure compatibility between systems much as common word processing programs translate to and from other common formats and much as printers and word processing software communicate with each other through appropriate printer drivers. In neither of these cases has any independent standards organization developed a standard that is at all relevant in the marketplace.

Standardizing the elements of Knowbot and permissions headers involves content standardization, which generally is more challenging than format standardization.42 A permissions header/Knowbot standard is a system for representing legal concepts and for defining legal relations. As such, the standard is basically a grammar for a rule based substantive system in a very narrow domain.43 The data elements must correspond to legally meaningful relational attributes. The allowable values must correspond to legally allowable rights, obligations, privileges and powers. In other words, the standard setter must meet many of the challenges that a

legal expert system designer working with Hohfeldian frameworks must meet.44 This adds a constraint to the standards setting process. Unlike setting format standards, where the participants are free to agree on an arbitrary way of expressing format attributes, participants in setting a content standard must remain within the universe of permissible content. The set of permissible values is determined by the law rather than being determined only by the imagination of format creators.

Enforcement and Bottlenecks

One of the many profound observations by Ithiel de Sola Pool was that copyright always has depended upon technological bottlenecks for its enforceability. The printing press was the original enforcement bottleneck. Now, a combination of the printing press and the practical need to inventory physical artifacts representing the work constitute the enforcement bottlenecks. As technologies change, old bottlenecks disappear and enforceability requires a search for new bottlenecks. When there are single hosts, like Westlaw, Dialog, Lexis, and CompuServe, access to that host is the bottleneck. The problem with distributed publishing on an open architecture internet is that there is no bottleneck in the middle of the distribution chain corresponding to the printer, the warehouse or the single host.

If new bottlenecks are to be found, they almost surely will be found at the origin and at the point of consumption. Encryption and decryption techniques discussed elsewhere in this volume concentrate on those bottlenecks as points of control. It also is possible that rendering software could become the new bottleneck as Mr. Linn suggests.

Even with those approaches, however, a serious problem remains in that the new technologies make it difficult or impossible to distinguish between mere use and copying. Thus the seller cannot distinguish between an end user45 and a potential competitor. On the other hand, the new technologies permit a much better audit trail, potentially producing better evidence for enforcement adjudication.

If network architectures for electronic publishing evolve in the way that Ted Nelson suggests with his Xanadu concept, the real value will be in the network and the pointers, not in the raw content. Thus, the creative and productive effort that the law should reward is the creation and productive effort that the law should reward is the creation and production and delivery of pointers, presentation, distribution, and duplication value. If this is so, then technological means will be particularly important, foreclosing access by those lacking passwords and other keys and limiting through contract what a consumer may do with the information.

In such an architecture, the law either will be relatively unimportant because technology can be counted on to prevent free riding or, the law will need to focus not on prohibiting copying or use without permission, but on preventing circumvention of the technological protections. Thus, legal approaches like that used to prevent the sale of decryption devices for television broadcasts and legal issues associated with contract enforcement may be more important than traditional intellectual property categories.

Weighing Risks and Costs

The law generally imposes sensible levels of transaction costs. Usually, transaction costs are proportional to the risk. Figure 1 shows a continuum of risk and transaction cost in traditional and new technologies. A real estate closing involves significant risks if there is some dispute later about the transaction. Therefore, the law affords much protection, including a constitutional officer called a registrar of deeds who is the custodian of records associated with the transaction. The risk level analogous to this in electronic publishing might be access to an entire library including access software as well as contents. Next, is a transaction involving a will or power of attorney. There, the risk is substantial because the maker of the instrument is not around to help interpret it. The law requires relatively high levels of assurance here, though not as great as those for real estate transactions. The law requires witnesses and attestation by a commissioned minor official called a notary public. The electronic publishing analogy of this level of risk might be the contents of an entire CDROM.

Next, in level of risk is the purchase of a large consumer durable like an automobile. The law requires somewhat less, but still significant protections for this kind of transaction: providing for the filing and enforcement of financing statements under the Uniform Commercial Code. The electronic publishing analogy might be the transfer of copyright to a complete work. Next, down the risk continuum, is the purchase of a smaller consumer durable like a television set. Here, the law typically is reflected in written agreements of sale, but no special third party custodial mechanisms. The electronic publishing analogy might be use permission for a complete work.

Finally, is the purchase of a relatively small consumer item, say a box of diskettes. Neither the law or commercial practice involves much more than the exchange of the product for payment, with no written agreement or anything else to perform channeling, cautionary, evidentiary, or protective functions [make sure these function and the citation appears earlier]. The electronic publishing analogy might be use permission for part of a work.

Cost effectiveness = risk-proportional security

traditional transaction institutions electronic equivalent

real estate closing registrar of deeds entire library - software and

contents

will/power of attorney witnesses, notary public contents of entire CDROM

auto purchase UCC financing statement complete work - transfer of

copyright

television set purchase written sale agreement complete work - use permission

box of diskettes - part of a work - use permission

An encrypted object combined with rendering software is probably inconsistent with an open architecture. Because of the difficulty of setting standards for such technologies, this approach to intellectual property protection probably would be effectuated by proprietary approaches thus frustrating the vision of an open market for electronic publishing.

Conclusion

Realization of the digital library vision requires a method for collecting money and granting permission to use works protected by intellectual property. The concept of a knowbot and a permissions header attached to the work is the right way to think about such a billing and collection system. Standards for the data structures involved must be agreed to, and systems must be designed to satisfy legal formalities aimed at ensuring awareness of the legal significance of transactions and reliable proof of the terms of the transactions.

In the long run, not only must these technological issues be resolved, with appropriate attention to levels of risk and protections available under traditional legal doctrines, but also further conceptual development must be undertaken. Proponents of electronic publishing over wide area networks need to think about the appropriate metaphors: whether it is a library or a bookstore, if a library whether with or without xerox machines, if a bookstore whether it is a retail bookstore, or a mail order operation. Then, thought must be given to how standards will be set. Finally, and most important, much more needs to be understood about the need for third party institutions. There is a good deal of enthusiasm for public key encryption. Yet the vulnerability of public key encryption systems is in the integrity of the key authority. In traditional legal protections, the third party custodians or authenticating agents like notary public and registrars of deeds receive state sanction and approval, and in the case of registrars of deeds, public funding. We must be clearer as to whether a similar infrastructure must be developed to protect against substantial risks and the use of EDI and electronic publishing technologies.

Finally, and perhaps most importantly, we must be thoughtful about what legal obligations, imposed on whom, are appropriate? The suggested 102(e) and (f) in the High Performance Computing Act looks very much like King James I's licensing of printing presses. It also looks like the FBI's proposal to prohibit the introduction of new technologies until certain conformity with past legal concepts is assured. Such approaches make the law a hurdle to new technology -- an uncomfortable position for both law and technology.

Petitioner Apple Inc. - Exhibit 1002, p. 6291

1 The use of EDI techniques to meter usage and determine charges for use of intellectual property is an example of billing and collection value in a typology of different types of value that can be produced in electronic marketplaces for information. See Henry H. Perritt, Jr., Market Structures for Electronic Publishing and Electronic Contracting in Brian Kahin, ed., Building Information Infrastructure: Issues in the Development of the National Research and Education Network (Harvard University and McGraw-Hill 1992) (developing typology for different types of value and explaining how market structures differ for the different types); Henry H. Perritt, Jr., Tort Liability, the First Amendment, and Equal Access to Electronic Networks, 5 Harv.J.Law & Tech. 65 (1992) (using typology of ten types of value to analyze access by competing producers of value).

14 Browsability through techniques like the collapsible outliner function in Microsoft Word for Windows and competing products require more chunking and tagging value in the form of style and text element codes. Handling this additional formatting information through encryption and description processes is problematic.

15 " A 'transfer of copyright ownership' is an assignment, mortgage, exclusive license, or any other conveyance, alienation, or hypothecation of a copyright or

of any of the exclusive rights comprised in a copyright, whether or not it is limited in time or place of effect, but not including a non-exclusive license " 17 U.S.C. 101 (1988).

16 17 U.S.C. 204(a) (1988); Valente-Kritzer Video v. Pinckney, 881 F.2d 772, 774 (9th Cir. 1989) (affirming summary judgment for author; oral agreement unenforceable under Copyright Act); Library Publications, Inc. v. Medical Economics Co., 548 F. Supp. 1231, 1233 (E.D. Pa. 1982) (granting summary judgment against trade book publisher who sought enforcement of oral exclusive distribution agreement; transfer of exclusive rights, no matter how narrow, must be in writing), aff'd mem., 714 F.2d 123 (3d Cir. 1983).

17 17 U.S.C. 205 (1988) provides constructive notice of the contents of the recorded document, determining priority as between conflicting transfers, and determines priority as between recorded transfer and non-exclusive license. The former requirement for transfers to be recorded in order for the transferee to maintain an infringement, 17 U.S.C. 205(d), was repealed by the Berne Act Amendments 5.

18 under Adams v. Burke, 84 U.S. (17 Wall.) 453 (1873), a patentee must not attempt to exert control past the first sale. In general, use restrictions may be placed only on licensees, consistent with General Talking Pictures v. Western Elec., 304 U.S. 175 (1938). See generally Baldwin-Lima-Hamilton Corp. v. Tatnall, 169 F. Supp. 1 (E.D. Pa.1958) (applying no control after purchase rule).

19 See Red-Baron-Franklin Park, Inc. v. Taito Corp., 883 F.2d 275, 278 (4th Cir. 1989) (purchase of video game circuit boards did not create privilege to perform video game under first sale doctrine); United States v. Moore, 604 F.2d 1228, 1232 (9th Cir. 1979) (pirated sound recording not within first sale doctrine in criminal copyright infringement prosecution). But see Mirage Editions, Inc. v. Albuquerque A.R.T. Co., 856 F.2d 1341, 1344 (9th Cir. 1988) (first sale doctrine did not create privilege to prepare derivative work by transferring art in book to ceramic tiles).

20 The way in which the first sale doctrine would impact the electronically imposed use restrictions is by frustrating a breach-of-contract lawsuit by the licensor against a licensee who exceeds the use restrictions. The licensee exceeding the use restrictions would argue that it violates public policy to enforce the restrictions and therefore that state contract law may not impose liability for their violation. See generally Restatement (second) of Contracts 178 (1981) (stating general rule for determining when contract term in unenforceable on grounds of public policy).

21 In addition, as ____ of this paper notes, the Copyright Act itself requires signed writings for transfers of copyright interests. 17 U.S.C. 204(a). (1988).

22 Michael S. Baum & Henry H. Perritt, Jr., Electronic Contracting, Publishing and EDI Law ch. 6 (1991) (contract, evidence and agency issues) [hereinafter "Baum & Perritt"]. Accord, Signature Requirements Under EDGAR, Memorandum from D. Goelzer, Office of the General Counsel, SEC to Kenneth A. Fogash, Deputy Executive Director, SEC (Jan. 13, 1986) (statutory and non-statutory requirements for "signatures" may be satisfied by means other than manual writing on paper in the hand of the signatory . . . "In fact, the electronic transmission of an individual's name may legally serve as that person's signature, providing it is transmitted with the present intention to authenticate.").

23 17 U.S.C. 101 (1988). For copyright purposes, a work is created, and therefore capable of protection, when it is fixed for the first time. 17 U.S.C. 101 (1988). "[I]t makes no difference what the form, manner, or medium of fixation may be - whether it is in words, numbers, notes, sounds, pictures, or any other graphic or symbolic indicia, whether embodied in a physical object in written, printed, photographic, sculptural, punched, magnetic, or any other stable form, and whether it is capable of perception directly or by means of any machine or device 'now known or later developed." 1976 U.S. Code Cong. & Admin. News 5659. 5665. The legislative history further says that, "the definition of 'fixation' would exclude from the concepts purely of an evanescent or transitory nature -reproductions such as those projected briefly on a screen shown electronically on a television or other video display or captured momentarily in the 'memory' of a computer." 17 U.S.C. 102 note (excerpting from House Report 94-1476).

24 Or, more likely, what is on computer medium read by

computer x, such as a magnetic cartridge used for archival records. Further references in the textual discussion to "what is in computer x now" should be understood to include such computer readable media.

25 Cf. Peritz, Computer Data and Reliability: A Call for Authentication of Business Records Under the Federal Rules of Evidence, 80 Nw.U.L.Rev. 956, 980 (1986) (proof that a printout accurately reflects what is in the computer is too limited a basis for authentication of computer records).

26 In some cases, the electronic transaction will be accomplished by means of a physical transfer of computer readable media. In such a case, this step in the proof would involve proving what was received physically.

27 See generally Peritz, Computer Data and Reliability: A Call for Authentication of Business Records Under the Federal Rules of Evidence, 80 Nw.U.L.Rev. 956, 979 (1986) (citing as examples of authentication Ford Motor Credit Co. v. Swarens, 447 S.W.2d 53 (Ky. 1969) (authentication by establishing relationship between computer-generated monthly summary of account activity and the customer reported on); Ed Guth Realty, Inc. v. Gingold, 34 N.Y.2d 440, 315 N.E.2d 441, 358 N.Y.S.2d 367 (1974) (authentication of summary of taxpayer liability and the taxpayer)).

28 Of course, a paper document signed at the end also is probative of the fact that no alternations have been made. In this sense, a signature requirement telescopes several steps in the inquiry outlined in the text.

29 United States v. Linn, 880 F.2d 209, 216 (9th Cir. 1989) (computer printout showing time of hotel room telephone call admissible in narcotics prosecution). See also United States v. Miller, 771 F.2d 1219, 1237 (9th Cir. 1985) (computer generated toll and billing records in price-fixing prosecution based on testimony by billing supervisor although he had no technical knowledge of system which operated from another office; no need for programmer to testify; sufficient because witness testified that he was familiar with the methods by which the computer system records information).

30 See United States v. Hutson, 821 F.2d 1015, 1020 (5th Cir. 1987) (remanding embezzlement conviction, although

computer records were admissible under business records exception, despite trustworthiness challenged based on fact that defendant embezzled by altering computer files; access to files offered in evidence was restricted by special code).

- 31 Restatement (Second) of Contracts (1981).
- 32 Cite for when extrinsic evidence is admissible.
- 33 See Baum & Perritt 2.6; The Electronic Messaging Services Task Force, The Commercial Use of Electronic Data Interchange--A Report and Model Trading Partner Agreement, 45 Bus.Law. 1645 (1990); Jeffrey B. Ritter, Scope of the Uniform Commercial Code: Computer Contracting Cases and Electronic Commercial Practices, 45 Bus.Law. 2533 (1990); Note, Legal Responses to Commercial Transactions Employing Novel Communications Media, 90 Mich.L.Rev. 1145 (1992)

34 Garber v. Harris Trust & Savings Bank, 432 N.E.2d 1309, 1311-1312 (Ill. App. 1982) ("each use of the credit card constitutes a separate contract between the parties;" citing cases).

It is not quite this simple, because both merchant and credit card customer have separate written contracts with the credit card issuer. But there is no reason that a supplier of information to a Digital Library System and all customers of that system might not have their own contracts with the Digital Library System in the same fashion.

35 Rowland v. Union Hills Country Club, 757 P.2d 105 (Ariz. 1988) (reversing summary judgment for country club officers because of factual question whether club followed bylaws in expelling members); Straub v. American Bowling Congress, 353 N.W.2d 11 (Neb. 1984) (rule of judicial deference to private associations, and compliance with association requirements, counseled affirmance of summary judgment against member of bowling league who complained his achievements were not recognized). But see Wells v. Mobile County Board of Realtors, Inc., 387 So.2d 140 (Ala. 1980) (claim of expulsion of realtor from private association was justiciable and bylaws, rules and regulations requiring arbitration were void as against public policy; reversing declaratory judgment for defendant association).

- 36 F.R.E. 803(6) (excluding business records from inadmissibility as hearsay); 28 U.S.C. 1732 ("Business Records Act" permitting destruction of paper copies of government information reliably recorded by any means and allowing admission of remaining reliable record).
- 37 See Peritz, Computer Data and Reliability: A Call for Authentication of Business Records Under the Federal Rules of Evidence, 80 Nw.U.L.Rev. 956, 978-80, 984-85 (1986) (noting body of commentator opinion saying that business records exception and authentication are parallel ways of establishing reliability).
- 38 See F.R.E. 901(b)(4) (appearance, contents, substance, internal patterns, as examples of allowable authentication techniques).
- 39 Peritz, Computer Data and Reliability: A Call for Authentication of Business Records Under the Federal Rules of Evidence, 80 Nw.U.L.Rev. 956, 963-64 (1986) (identifying steps and trend resulting in F.R.E.).
- 40 Peritz, Computer Data and Reliability: A Call for Authentication of Business Records Under the Federal Rules of Evidence, 80 Nw.U.L.Rev. 956, 963 (1986).
- 41 Peritz, Computer Data and Reliability: A Call for Authentication of Business Records Under the Federal Rules of Evidence, 80 Nw.U.L.Rev. 956, 974 (1986) (reporting four requirements of Manual, and endorsing their use generally).
- 42 See Henry H. Perritt, Jr., ____, ___ Jurimetrics ____ (1993) (distinguishing between format and content standardization).
- 43 See Marc Lauritsen, ___ (explaining relationship between substantive legal systems and the field of artificial intelligence).
 - 44 See Thorne, McCarty; Kevin Ashley; and Gardner.
- 45 It may not be particularly important to limit competition by consumers, because the consumers will never have the pointers and the rest of the network infrastructure.

Abstract of JP5100939

PURPOSE:To execute read-out and write of a file only from a specific program by deciding an identifier of a program by an identifier of a file management node, and executing the access management by the access right corresponding to the identifier.

corresponding to the identifier. CONSTITUTION:An access right setting means 13 sets an identifier 11a given to a program of a file 12 as file management information to a file management node 11 for managing the file 12. Also, the access right 11b corresponding to the identifier 11a is registered and set as the access right of the file 12. In such a way, in the case of accessing the file 12 by executing the program, a file access managing means 17 decides an identifier of the program concerned by the identifier 11a set to the file management node 11. Subsequently, by this identifier, the access right 11b registered in the file management node 11 of the file 12 being an access object is discriminated. In accordance with information of this access right 11b, an access of the file 12 is controlled.

(54) 【発明の名称】 フアイルシステム

(57)【要約】

【目的】 ある特定のプログラムからのみ、ファイルの 読出し、ファイルへの書込みを可能とするファイルシス テムを提供する。

【構成】 ファイル対応のファイル管理ノードに当該ファイルのアクセス権を登録し、ファイル管理ノードに登録したアクセス権により、ファイルアクセスを行うファイルシステムおいて、ファイル管理ノードに当該ファイルのプログラムに与える識別子と、識別子対応のアクセス権とを登録し、プログラム実行によりファイルをアクセスする場合、ファイル管理ノードの識別子により当該プログラムの識別子を判定し、当該プログラムの識別子により、当該ファイルのアクセス対象のファイルのファイル管理ノードの識別子に対応して設定されたアクセス権により、当該ファイルのアクセス管理を行う。

(2)

【特許請求の範囲】

【請求項1】 各々のファイル対応に設けられるファイ ル管理ノードに当該ファイルのアクセス権を登録し、フ ァイル管理ノードに登録したアクセス権により、各々の ファイルのアクセスを行うファイルシステムにおいて、 ファイル管理ノードに、当該ファイルのプログラムに与 える識別子と当該ファイルのアクセス権として更に識別 子対応のアクセス権とを登録するアクセス権設定手段 ٤,

プログラムの実行によりファイルをアクセスする場合 10 を持つ所有者を定義する。 に、ファイル管理ノードの識別子により当該プログラム の識別子を判定し、当該プログラムの識別子により、ア クセス対象のファイルのファイル管理ノードに登録され た識別子に対応して設定されたアクセス権により、ファ イルのアクセスを管理するファイルアクセス管理手段と を含むことを特徴とするファイルシステム。

【発明の詳細な説明】

[0001]

【産業上の利用分野】本発明は、ファイルシステムに関 いて、アクセス権によるファイル管理機能を有効利用し てシステムのセキュリティを高めたファイルシステムに 関するものである。

[0002]

【従来の技術】従来、情報処理システムにおいて、ある 目的を持ったデータの集まりはファイルとして取り扱わ れ、データ処理がなされる。ファイルはシステム規模が 大きくなると、爆発的に増加する。このため、多くの各 種のファイルを統一的に取り扱うための手法が開発され ている。例えば、ファイル管理は、情報処理装置で取り 30 ファイルの大きさ: ファイル中のデータは、バイト 0 扱われる各種のファイルを標準的な方法で統一的に管理 し、プログラムが簡便な使い方でファイルに関する処理 を効率よく、経済的に行える機能を提供する。このよう なファイル管理の機能は、オペレーティングステムの中 におけるファイルシステムとして提供される。プログラ ムは、オペレーティングシステムが提供するファイルシ ステムのインタフェースを介して、ファイルへの読み出 しや書込みを行うことになる。その場合、各々のファイ ルは、アクセス権によるファイル管理が行なわれ、デー 夕保護,システムの機密保護などが機能できるようにな 40 る。このファイルは6030バイトのデータを含んでお っている。

【0003】例えば、UNIXシステムにおけるファイ ルシステムでは、ファイルからのデータの読み出しは、 readシステムコールで行なわれ、また、ファイルへのデ ータの書き込みは、writeシステムコールで行なわれる (Maurie J Bach著/坂本文・多田好克・村井純 訳 "UNIXカーネルの設計", 1991年6月10日, 共立出 版発行, pp51~54, pp82~87などを参照)。

【0004】このようなファイルシステムにおいては、 ユーザのファイルアクセスリクエストに対してのファイ 50 対して、ファイルシステムは当該ファイルの読出しと実

ルへの読み出しや書込みの制御は、ファイルに対するア クセス権で管理されている。ファイルのアクセス権に関 する情報は i ノード (ファイル管理ノード) に設けら れ、このiノードにおけるファイル管理情報により管理 される。図6はファイル管理ノードであるiノードの一 例を説明する図である。 i ノードは次のようなフィール ドから構成される。

ファイル所有者識別子: 所有者は個人所有者と「グル ープ」所有者が分け持ち、ファイルにアクセスする権利

ファイルの種類: ファイルは通常型,ディレクトリ, 文字型またはブロック特殊ファイル、FIF〇 (パイ プ) のいずれかである。

ファイルへのアクセス許可: システムは、ファイルの 所有者、ファイルのグループ所有者、その他の利用者の 3つの等級に従ってファイル保護を行う。各等級に対し て当該ファイルの読出し(r),書込み(w),実行 (x) に関するアクセス権を持ち、個々に設定する。例 えば、ディレクトリのファイルは、実行できないため、 し、特に、情報処理装置におけるファイルシステムにお 20 ディレクトリに対する実行許可では、当該ディレクトリ の中でファイル名を探す権利を有することを意味する。 ファイルへのアクセス時刻: ファイルを最後に更新し た時刻、最後にアクセスした時刻、1ノードを最後にア クセスした時刻を示す。

> ファイル内のデータにディスクアドレスに関するアドレ ス表: 利用者はファイル中のデータをバイトの論理ス トリームとして扱うが、システムのカーネルはデータを 不連続なディスクブロックとして管理する。 i ノードは ファイルのデータを含むディスクブロックを識別する。

から始まるファイルの最初から数えたバイト数でアドレ ス指定することができる。このファイルの大きさは、フ ァイル中のデータの最高のバイト変位よりも1だけ大き い。例えば、利用者があるファイルを作成し、ファイル のバイト変位1000のところに1パイトのデータを書 込んだ場合、ファイルの大きさは1001バイトとな

【0005】例えば、図6に示すiノードの例は、"M JB"が所有する通常型のファイルのiノードの例であ り、許可モード(アクセス権)として"rwxr-xr -x"の9桁の文字データを設定している。ここでの最 初の3桁の文字"rwx"により、ファイルシステムは 所有者"MJB"に対して、ファイルの読出し、書込 み、実行を許可していることを意味している。また、次 の3桁の文字"r-x"により、"OS"というグルー プのメンバーに対し、ファイルシステムは当該ファイル の読出しと実行のみを許可していることを意味し、そし て、最後の3桁の文字"r-x"により、他の利用者に 行のみを許可することを意味している。。このため、 "OS"というグループのメンバーと他の利用者は、当 該ファイルに対して、ファイルの読出しと実行だけが可 能であり、書込みはできない。

【0006】また、iノードでは、最終アクセス時刻、 最終更新時刻などの時刻情報を保持して、ファイルを管 理している。この例のiノードでは、最後に誰かがこの ファイルを読み出したのは1990年10月23日午後 1時45分であり、最後に誰かがこのファイルに書込み あるという管理情報が保持されている。

【0007】このように、UNIXシステムのファイル システムでは、各々のファイルに1対1に設けられたフ ァイル管理ノード(iノード)を用い、そのファイル管 理ノードに当該ファイルのアクセス権、所有者などのフ ァイル管理情報を設定し、当該ファイルを管理してい る。

[0008]

【発明が解決しようとする課題】ところで、ファイルシ する当該ファイルのアクセス権、所有者などのファイル 管理情報により、当該ファイルが管理されているため、 利用者がアクセス権さえ、何らの方法により持てば、同 じファイルを複数のプログラムから読み出したり、書込 んだりできることになる。このようなファイルシステム を用いて、例えば、データベース管理システムのような 特定のプログラムからのみファイルへの読み出しや書込 みを行い、一般のプログラムからは読み出しのみしか行 えないようなシステムを構成する場合には、上述のよう する上で不具合が生ずることになる。

【0009】本発明は、上記のような問題点を解決する ためになされたものであり、本発明の目的は、ある特定 のプログラムからのみファイルの読出し、ファイルへの 書込みを可能とするファイルシステムを提供することに ある。

[0010]

【課題を解決するための手段】上記の目的を達成するた め、本発明のファイルシステムは、各々のファイル対応 に設けられるファイル管理ノード(11;図1)に当該 40 に説明する。図1は本発明の一実施例にかかるファイル ファイル(12;図1)のアクセス権を登録し、ファイ ル管理ノードに登録したアクセス権により、各々のファ イルのアクセスを行うファイルシステムにおいて、ファ イル管理ノード(11;図1)に、当該ファイルのプロ グラムに与える識別子と当該ファイルのアクセス権とし て更に識別子対応のアクセス権とを登録するアクセス権 設定手段(13;図1)と、プログラムの実行によりフ ァイルをアクセスする場合に、ファイル管理ノードの識 別子により当該プログラムの識別子を判定し、当該プロ

イル管理ノードに登録された識別子に対応して設定され

たアクセス権により、ファイルのアクセスを管理するフ ァイルアクセス管理手段(17;図1)とを含むことを 特徴とする。

[0011]

【作用】ファイルシステムにおいては、各々のファイル 対応に設けられるファイル管理ノード(11)に当該フ ァイル(12)のアクセス権を登録し、ファイル管理ノ ードに登録したアクセス権によって、各々のファイルの をしたのは1990年10月22日午後10時30分で 10 アクセス権が管理され、ファイルのアクセス制御が行な われる。このようなファイルシステムにおいて、アクセ ス権設定手段(13)と、ファイルアクセス管理手段 (17) とが設けられる。アクセス権設定手段(13) は、ファイルを管理するためのファイル管理ノード(1 1) に、ファイル管理情報として、当該ファイルのプロ グラムに与える識別子を設定し、更にファイルのアクセ ス権として、識別子対応のアクセス権とを登録設定す る。これにより、ファイルアクセス管理手段(17) は、プログラムの実行によりファイルをアクセスする場 ステムでは、上述のように、ファイル管理ノードに設定 20 合、ファイル管理ノードに設定した識別子により当該プ ログラムの識別子を判定し、当該プログラムの識別子に より、アクセス対象のファイルのファイル管理ノードに 登録された識別子に対応して設定されたアクセス権を判 別し、当該アクセス権の情報に従って、ファイルのアク セスを行うアクセス制御を行う。

【0012】このように、実行プログラムのファイルか らは、プログラム実行にかかるファイルアクセス要求が 発行された場合、当該プログラムの識別子が判定され、 その識別子に対応して設定されているアクセス権により なファイル管理機能では、その対応のプログラムを実現 30 ファイルアクセス制御が行なわれる。これにより、単に ファイル所有者、利用者に対して設定されているアクセ ス権によるファイルアクセス制御のみでなく、実行プロ グラムのレベルでのアクセス権でのファイルのアクセス 制御が可能となり、ファイル操作、ファイル処理、ファ イル管理などシステム構築の自由度が大きくなり、ま た、システムの安全性を配慮したシステム構成が容易に 実現可能となる。

[0013]

【実施例】以下、本発明の一実施例を図面により具体的 システムの要部構成を説明するブロック図である。図1 において、10はファイルシステム、11は各々のファ イル管理ノード、12は各々のファイルを示している。 各々のファイル12とファイル管理ノード11とは1対 1に対応している。ファイルAに対してはファイル管理 ノードAが対応し、ファイルBに対してはファイル管理 ノードBが対応し、また、ファイルCに対してはファイ ル管理ノードCが対応している。ファイル管理ノード1 2には自己が管理する該当のファイルにおける実行プロ グラムの識別子により、アクセス対象のファイルのファ *50* グラムに対して、識別子を設定するため識別子フィール 5

ド11aと、識別子に応じたアクセス権を設定するため の識別子アクセス権フィールド11bが設けられてい

【0014】このようなファイル管理ノード12に対し て、識別子、識別子に応じたアクセス権などを個別に設 定し、また、設定したファイル管理情報の確認を行うた め、ファイル管理ノード編集処理部13が設けられる。 このファイル管理ノード編集処理部13の処理機能によ り、プログラムに対する識別子設定処理14, 識別子に 応じたアクセス権設定処理15,ファイル管理ノードに 10 も、書込みも、実行も許可しないことを意味している。 おけるアクセス権確認処理16などが行なわれる。

【0015】また、このように設定されたファイル管理 ノードにおけるファイル管理情報を用いて、ファイルア クセス処理を行う場合のファイルアクセス制御を行うた め、ファイルアクセス処理部17がシステム内に設けら れる。

【0016】図2は、ファイルシステムにおけるファイ ル管理ノードと各ファイルの関係をファイル管理情報の データ例と共に説明する図である。データファイルのフ ァィル管理ノードの例を図2 (A) に示し、実行プログ 20 アクセス権のファイル管理情報は設定されておらず、当 ラムファイルのファィル管理ノードの例を図2 (B) に 示している。各ファイル管理ノードは、従来のファイル システムにおけるファイル管理ノードと同様に、ファイ ル所有者、ファイル所有者のグループ、ファイルの最終 アクセス時刻、ユーザに応じたアクセス権、ファイルの 実体のディスク上の位置を示すディスクのアドレスなど のファイル管理情報を保持しており、ここでは、更に、 プログラムに与えられる識別子、プログラムに応じたア クセス権のファイル管理情報が付加される。

に対するファイル管理ノード20には、ファイル管理情 報として、所有者 "Hayata", グループ "FXK SP", 最終アクセス時刻 "Apr. 5 1991 1 9:00:00", 最終変更時刻 "Apr. 4 199 1 12:30:00", ユーザに応じたアクセス権 "rwxr-xr-x", プログラムに応じたアクセス 権"(100 rwx) (101 r--) (102 r -x)",プログラムに与えられる識誕子"0",ディ スクのアドレス"12345"が設定されている。

【0018】ファイル内容が実行プログラムであるファ 40 イル23に対するファイル管理ノード22には、ファイ ル管理情報として、所有者"Hayata", グループ "FXKSP", 最終アクセス時刻 "Apr. 3 19 91 19:00:00", 最終変更時刻 "Apr. 3 1991 12:30:00", ユーザに応じたアク セス権 "rwxr-xr-x", プログラムに応じたア クセス権 "0", プログラムに与えられる識別子 "10 0", ディスクのアドレス"22345"が設定されて いる。

【0019】この例では、データファイルのファイルA 50 ードから、識別子対応のアクセス権(プログラムに応じ

(21) に関して、そのファイル管理情報であるプログ ラムに応じたアクセス権として、"(100 rwx) (101 r--) (102 r-x) "が設定されて いる。この設定のプログラムに応じたアクセス権の意味 は、識別子100のプログラムについては、読出し、書 込み、実行を許可し、識別子101のプログラムについ ては、読出しのみを許可し、また、識別子102のプロ グラムについては、読出し、実行を許可し、書込みは許 可しない。それら以外のプログラムについては、読出し なお、ファイルAの識別子フィールドは"0"となって おり、実行形式ファイルの実行プログラムファイルでな いため、ファイルAには識別子は与えられていない。

【0020】また、実行プログラムファイルのファイル Bに関しては、そのファイル管理情報であるプログラム に与えられる識別子として"100"が設定されてお り、このファイルBにおけるプログラムには識別子10 0が与えられることを示している。また、ファイルB は、データファイルではないので、プログラムに応じた 該フィールドの各々の識別子に応じたアクセス権の情報 は与えられていない。

【0021】図3は、ファイル管理ノードのファイル管 理情報を用いてファイルアクセス時に行なわれるアクセ ス権チェック処理の一例を示すフローチャートである。 この処理は、ファイルアクセス処理部(17;図1)に より行なわれる。このアクセス権チェック処理では、ま ず、ステップ31において、実行プログラムファイルに 対するファイル管理ノードを得ると、次に、ステップ3 【0017】ファイル内容がデータであるファイル21 30 2において、ファイル管理ノードからプログラムに与え られた識別子IDを得る。次に、ステップ33におい て、読み出し対象ファイルのファイル管理ノードを得 る。そして、次のステップ34において、ファイル管理 ノードからプログラムに応じたアクセ権データAを読み 出す。次に、ステップ35において、読み出したアクセ ス権データAの中からプログラム識別子IDに対応する アクセス権ACを得る。そして、次のステップ36にお いて、アクセス権ACの内容の判別を行い、アクセス権 に応じたアクセス処理を行う。すなわち、アクセス権A Cにread許可がある場合には、当該ファイル読出し が可能なので、リターン処理を行い、ファイルアクセス を行っているREADシステムコールのメインルーチン に戻る。アクセス権ACにTead許可がない場合に は、当該ファイル読出しが不可なので、エラーリターン 処理を行い、ファイルのリードエラー処理を行う。

> 【0022】このようにして、プログラムの実行中にフ ァイルがアクセスがなされた場合、当該実行プログラム に与えられている識別子を対応のファイル管理ノードか ら得て、この識別子よりアクセス対象のファイル管理ノ

たアクセス権)を得て、このアクセス権により、ファイ ルアクセスを行うファイル管理を行う。これにより、ア クセス権情報によるアクセス管理は、単にファイル所有 者,利用者に対して設定されているアクセス権によるフ ァイルアクセス制御のみでなく、実行プログラムのレベ ルでのアクセス権でのファイルのアクセス制御が可能と なる。また、ファイル処理、ファイル操作にかかるシス テム構築の自由度が大きくなり、システムの安全性を配 慮したシステム構成が容易に実現可能となる。

られるファイル管理ノードにおけるファイル管理情報を 設定し、確認するための処理機能要素について説明す る。前述したように、ここでは、ファイル管理ノードに 対して、識別子、識別子に応じたアクセス権などを個別 に設定し、また、設定したファイル管理情報の確認を行 うため、ファイル管理ノード編集処理部(13:図1) が設けられている。このファイル管理ノード編集処理部 の各々の処理機能により、プログラムに対する識別子設 定処理、識別子に応じたアクセス権設定処理、ファイル

【0024】図4はファイル管理ノードに対するプログ ラム識別子設定処理を示すフローチャートであり、ま た、図5はファイル管理ノードに対するプログラム対応 のアクセス権設定処理を示すフローチャートである。例 えば、図4に示すファイル管理ノードに対するプログラ ム識別子設定処理では、まず、ステップ41において、 ファイル名から対応するファイル管理ノードを得て、次 のステップ42で、このファイル管理ノードに対してプ ログラムに与える識別子をセットする。具体的には、例 30 えば、ファイル毎のファイル管理ノードに、当該ファイ ルの識別子を設定する手続き関数として、次のような関 数形式のプログラムset_idを作成して実行する。

set_id(ファイル名, 識別子)

set_idは、実行プログラムであるファイル名ならびに識 別子を引数としてとり、指定したファイル名のファイル 管理ノードに指定した識別子を書き込む処理を行う手続 き関数である。

【0025】また、図5に示すファイル管理ノードに対 するプログラム対応のアクセス権を設定する処理では、 まず、ステップ51において、ファイル名から対応する ファイル管理ノードを得て、次のステップ52におい て、このファイル管理ノードに対して、識別子とそれに 応じたアクセス権データをセットする。具体的には、例 えば、ファイル毎のファイル管理ノードに対し、識別子 (プログラム) に応じたアクセス権を設定する手続き関 数として、次のような関数形式のプログラムchapmodを 作成して実行する。

chapmod(ファイル名、識別子、アクセス権)

chapmodは、ファイル名、識別子ならびにアクセス権を 50

引数として取り、指定したファイル名に対応するファイ ル管理ノードに、指定した識別子に応じとそれに対応し たアクセス権の情報を書き込む処理を行う手続き関数で ある。

【0026】また、ファイルアクセスを行う上でのファ イル毎の各々の識別子に応じたアクセス権を確認する機 能コマンドは、ファイルの読出し、書込みなどのファイ ルアクセスを行うreadや、writeなどのシステムインタ フェース機能を用いることにより実行する。すなわち、 【0023】次に、このようなファイルシステムに用い 10 システムにおけるファイルインタフェース機能を用い て、従来からユーザ対応に設定したアクセス権の確認処 理と同様にして、プログラム (識別子) に対応して設定 したアクセス権の確認を行う。

【0027】以上説明したように、本実施例のファイル システムによれば、実行プログラムのファイルに識別子 を与えて、当該ファイルのプログラムに対応する識別子 を設定しておき、また、アクセス対象のデータのファイ ルには、識別子に応じたアクセス権を与えておく。これ により、プログラム実行により、データファイルへのア 管理ノードにおけるアクセス権確認処理などが行なわれ 20 クセスが行なわれる場合、実行プログラムのファイルに 設定された識別子により、プログラムに設定された識別 子を判定し、この識別子に基づいて、データファアルの 識別子対応のアクセス権を判定する。そして、このアク セス権によりファイルアクセス制御を行う。これによ り、ファイル管理を、ユーザレベルだけでなく、プログ ラムレベルにおいても同様に行うことができる。また、 プログラム毎に一意の識別子を与えることにより、特定 のプログラムからのみのアクセスの制御を可能とするフ ァイルが実現できる。

[0028]

【発明の効果】以上に説明したように、本発明によれ ば、実行プログラムのファイルからは、プログラム実行 にかかるファイルアクセス要求が発行された場合、ファ イル管理ノードから当該プログラムの識別子が判定さ れ、データファイルのファイル管理ノードにその識別子 に対応して設定されているアクセス権によりファイルア クセス制御が行なわれる。これにより、単にファイル所 有者、利用者に対して設定されているアクセス権による ファイルアクセス制御のみでなく、実行プログラムのレ 40 ベルでのアクセス権でのファイルのアクセス制御が可能 となる。また、ファイル操作、ファイルの管理などのシ ステム構築の自由度が大きくなり、システムの安全性を 配慮したシステム構成が容易に実現可能となる。

This Acknowledgement Receipt evidences receipt on the noted date by the USPTO of the indicated documents, characterized by the applicant, and including page counts, where applicable. It serves as evidence of receipt similar to a Post Card, as described in MPEP 503.

New Applications Under 35 U.S.C. 111

If a new application is being filed and the application includes the necessary components for a filing date (see 37 CFR 1.53(b)-(d) and MPEP 506), a Filing Receipt (37 CFR 1.54) will be issued in due course and the date shown on this Acknowledgement Receipt will establish the filing date of the application.

National Stage of an International Application under 35 U.S.C. 371

If a timely submission to enter the national stage of an international application is compliant with the conditions of 35 U.S.C. 371 and other applicable requirements a Form PCT/DO/EO/903 indicating acceptance of the application as a national stage submission under 35 U.S.C. 371 will be issued in addition to the Filing Receipt, in due course.

New International Application Filed with the USPTO as a Receiving Office

If a new international application is being filed and the international application includes the necessary components for an international filing date (see PCT Article 11 and MPEP 1810), a Notification of the International Application Number and of the International Filing Date (Form PCT/RO/105) will be issued in due course, subject to prescriptions concerning national security, and the date shown on this Acknowledgement Receipt will establish the international filing date of the application.

Digital watermarking

ABSTRACT

This paper presents a process able to mark digital pictures with an invisible and undetectable secrete information, called the watermark. This process can be the basis of a complete copyright protection system.

The process first step consists in producing a secrete image. The first part of the secret resides in a basic information that forms a binary image. That picture is then frequency modulated. The second part of the secret is precisely the frequencies of the carriers. Both secrets depends on the identity of the copyright owner and on the original picture contents. The obtained picture is called the stamp.

The second step consists in modulating the ampitude of the stamp according to a masking criterion stemming from a model of human perception. That too theoretical criterion is corrected by means of morphological tools helping to locate in the picture the places where the criterion is supposed not to match.

This is followed by the adaptation of the level of the stamp at that places. The so formed watermark is then added to the original to ensure its protection.

That watermarking method allows the detection of watermarked pictures in a stream of digital images, only with the knowledge of the picture owner's secrets.

Keywords: copyright protection, watermark, secrete key, masking, human vision model, perceptive components, morphology, robustness, detection, correlation.

1 GENERAL INTRODUCTION

With the increasing availability of digitally stored information and the development of new multimedia services, security questions are becoming even more urgent. The acceptance of new services depends on whether suitable techniques for the protection of the work providers' interests are available.¹

Moreover the nature of digital media threatens its own viability:

• First the replication of digital works is very easy and, what is more dangerous, really perfect. The copy is identical to the original.

- The ease of transmission and multiple uses is very worrying, too. Once a single pirate copy has been made, it is instantaneously accessible to anyone who wants it, without any control of the original picture owner.
- Eventually the plasticity of digital media is a great menace. Any malevolent user (a pirate) can modify an image at will. Such maniplations are really easy for a pirate and put many copyright protection methods at risk.

According to these considerations the conception of a copyright protection system is really vital and it constitutes a great challenge, because it should cope with all these threats. Without watermarking, most authors will not dare to broadcast their work.

This paper presents an additive watermarking technique. It consits in producing a synthetic picture (also called the stamp) which holds informations about the ownership of the original image and depends on the picture contents. That stamp is added to the original in a way that resulting picture is perceptually identical to the original one and so that the stamp is indetectable by a pirate computer. The aim of that technique is not the authentication of the picture content nor the identication of the owner. It is to allow a controller (i.e. the owner's computer or a Trusted Third Part) to find out watermarked pictures in a stream of images with the knowledge of the owner's secret key in order to detect broadcast of illegal copies.

The most interesting part of that method is the embedding process i.e. the weighting of each pixels of the stamp before adding it to the original. This is based on the masking concept coming from a model of human vision (the perceptive model). From this concept was deduced a method which reveals itself actually efficient. Another interesting part is the presentation of two methods used for the detection of watermarked pictures without the original. This last point is fundemental for the management of the copyright protection. Eventually this paper ends with the analyse of the results and the system robustness.

2 THE MASKING

2.1 Introduction

The aim of a watermarking technique is to provide an invisible embedding of a secrete information, the watermark. This watermark must be masked (hidden) by the picture it is inlayed in. Precisely a master thesis has lead to a masking criterion deduced from physiological and psychophysic studies.² Nevertheless, this theoretical criterion having been formulated for monochromatic signals, it had to be adaptated to suit real images.

2.2 The perceptive model: approximation of the eye functionment

It is now admitted that the retina of the eye splits an image in several components. These components circulate from the eye to the cortex by different tuned channels, one channel being tuned to one component.

The characteristics of one component are:

- the location in the visual field (in the image).
- the spatial frequency (in the Fourier domain: the amplitude in polar coordinates).
- the orientation (in the Fourier domain: the phase in polar coordinates)

So, one perceptive channel can only be excited by one component of a signal whose characteristics are tuned to its. Components that have different characteristics are independent.

2.3 The masking concept

According to perceptive model of human vision,³ signals that have same (near) components take the same channels from the eye to the cortex. It appears that such signals interact and are submitted to non-linear effects. The masking is one of those effects.

Definition: the detection threshold is the minimum level below which a signal can not be seen.

Definition: the masking occurs when the detection threshold is increased because of the presence of another signal.

In other words, there is masking when a signal can not be seen because of another with near characteristics and at a higher level.

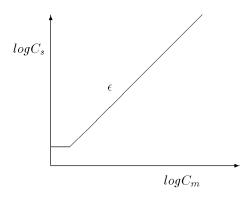

2.4 The masking model

With the object of modalizing the masking phenomenon, tests have been made on monochromatic signals, also called *gratings*. It appears that the eye is sensitive to the contrast of those gratings. This contrast is defined by:

$$C = \frac{2(Lmax - Lmin)}{Lmax + Lmin} \tag{1}$$

where L is the luminance.

It is possible to determine experimentally the detection threshold of one signal of contrast C_s with respect to the contrast C_m of the masking signal. That threshold can be modalized as follows:

Such bilogarithmic curves are traced for signals of one single frequency and one orientation (f_0, θ_0) . The expression of the detection threshold is thus:

$$C_s = \max[C_0, C_0(\frac{C_m}{C_0})^{\epsilon}] \tag{2}$$

where ϵ (the slope) depends on (f_0, θ_0) , typically, $0.6 \le \epsilon \le 1.1$.

It is possible to extend that expression to introduce frequency dependence. The general expression of the detection threshold is becomes:

$$C_s(C_m, f, \theta) = C_0 + k_{(f_0, \theta_0)}(f, \theta)[C_{s(f_0, \theta_0)}(C_m) - C_0]$$
(3)

where:

$$k_{(f_0,\theta_0)}(f,\theta) = exp\left[-\left(\frac{\log^2(\frac{f}{f_0})}{F^2(f_0)} + \frac{(\theta - \theta_0)^2}{\Theta^2(f_0)}\right]$$
(4)

In that expression, f_0 and θ_0 are relevant to the masking signal, f and θ are relevant to the masked signal, $F(f_0)$ and $\Theta(f_0)$ are parameters that represent the spreading of the Gaussian function, C_0 is often negligable. The spread of the gaussian function depends upon the frequency f_0 : For frequency, typical bandwith at half response are 2,5 octaves at 1 c/d and 1,5 octaves at 16 c/d with a linear decrease between both frequencies. For orientation, half bandwith at half response depends on f_0 and it takes typical values like 30 degrees at 1 c/d and 15 degrees at 16 c/d.

After this expression, the frequency dependence of the detection threshold has a Gaussian form. Only near frequency signals can interact. When the frequency of the masking signal (the mask) is far from this of the signal to mask, the detection threshold is almost equal to C_0 .

2.5 The masking criterion

It is important to notice that those results concern only gratings signals. To deduce a masking criterion that will apply to signals like real images, the preceding masking condition has to be adaptated. So, it is necessary to define a new concept able to take the place of the contrast, because the contrast is not define for real images. That new concept,² is the *local energy*.

The local energy is defined on narrowband signals centered around one frequency and one orientation. A picture which is a broadband signal is first filtered by Gabor narrowband filters, whose characteristics are near to human perception. The local energy around one frequency and one orientation is calculated following the scheme presented in this figure:

$$I(x,y)$$
 analytic filters (f_0,θ_0) $|\cdot|^2$ local energy (f_0,θ_0) $(x,y)=E_{(f_0,\theta_0)}(x,y)$

The masking criterion: If the local energy of one picture is less than the local energy of the mask, around all the frequencies (f_0, θ_0) and for each pixel (x, y), then one can say that the picture is masked by the mask. Strictly, a picture is masked by a mask if $\forall (x, y)$ and $\forall (f_0, \theta_0), E_{mask,(f_0,\theta_0)}(x, y) \geq E_{picture,(f_0,\theta_0)}(x, y)$. For real images, a good approximation of this criterion can be obtained by using a bank of filters whose central frequencies correspond to independent components and which are spread on all the Fourier space. It is admitted that 4 or 5 frequencies and 4 to 9 orientations are sufficient. The standard choice is twenty filters (5 frequencies and 4 orientations).

Figure 1: Example of basic information used

2.6 Conclusion

This section has lead to the expression of an easily implementable masking criterion appliable to any image. But this criterion is only an extension of a theoretic criterion appliable to monochromatic signals. Thus cases where that criterion does not match are possible.

3 PRINCIPLE OF THE SYSTEM

3.1 Basic information of the watermark

This information is a binary picture looking like a modified checkerboard (figure 1). As explained later, the pixels value of the square forming that picture can correspond to a binary sequence deduced from the copyright owner's (CO) secrete key.

3.2 The stamp

In order to take advantage of the eye behaviour, the basic information is modulated at different frequencies and orientations corresponding to rather independent components. Moreover, we take care to filter the initial checkerboard with a low pass filter (LPF) (i.e. a Butterworth LPF) so that the resulting signal is bandlimited. This point is very important because it permits to limit the verification of the masking criterion in the coresponding channel.

The position of the modulating carriers is secret. It can be deduced from CO's secret key. In practice, the frequency plan is divided into sectors. Each sector is relevant to one perceptive component and defined a group of couples (f, θ) where basic information can be modulated. Only one couple is chosen for each sector (because couples of a same sector don't stimulate independent components). The picture obtained from the sum of each modulated grid is called the stamp S(x, y).

$$S(x,y) = \sum_{j \in K} G(x,y) . cos(f_{x_j}.x + f_{y_j}.y)$$
 (5)

K represents the set of sectors and (f_{x_j}, f_{y_j}) correspond to the couple chosen in sector j (this couple is designed by the CO's secrete key).

3.3 The position of the process in a global copyright scheme

The process should be placed in a copyright protection scheme like drawn at figure 2.

The skeletization function consists in an image processing program extracting essential characteristics from an image. The result is a bitsteam. This must be followed by a hash-function⁶ whose result is a succession of blocks of bits. Every block has the same length. The skeletization function gives the same result for two near images (i.e. original image and watermarked image). But the H-function always gives different results from different bitstreams as inputs. So, the inscription keys will be different for perceptually distinct pictures. After the H-function, the ciphering function is a trapdoor function.⁶ Thanks to this function the inscription keys used to deduce the basic grid and the position of the carriers depends on the CO's secret key.

The aim of the use of a trapdoor function is to prevent someone from reproducing the same inscription keys with the knowledge of the H-function result. But it is possible for anyone to inverse that trapdoor function and to find the H-function result from the inscription keys. It can be interesting in a proof procedure.

4 IMPLEMENTATION

4.1 Inscription

The purpose of the inscription is to adapt the level of each part of the stamp (for all frequencies) to make it invisible once added to the picture. As mentioned above, each part of the stamp is narrow band. Inscriptions at different frequencies are thus independent and one can treat the different components of the stamp one at a time. For each frequency designed by the inscription keys, the procedure is divided in three steps: the modulation, the regulation of the level and the correction.

• Modulation

The first step consists in the modulation of the particular carrier by the lowpass grid G(x, y). The result is $G(x, y).cos(f_{x_j}.x + f_{y_j}.y)$, where f_{x_j} and f_{y_j} are the carrier position.

• Regulation of the level

According to the perceptual model, in order to guarantee the invisibility of the watermark its local energy has to be inferior to the picture local energy for each pixel around the inscription frequency. A way to reach this objective is to multiplicate the modulated grid by a weighting mask $Weight_j(x,y)$ reducing the amplitude of the stamp where energy in the corresponding component of the original picture is weak. Nevertheless, one must take care to keep the narrow band characteristic of the resulting signal $S_j(x,y)$ (= $Weight_j(x,y).G(x,y).cos(f_{x_j}.x+f_{y_j}.y)$) in order to avoid non linear interactions between different parts of the stamp. In conclusion, $\forall j$, we have to find a signal $Weight_j(x,y)$ so that:

- $\forall (x,y) \ E_{S_i}(x,y) < E_{I,(f_{x_i},f_{x_i})}(x,y)$
- $-S_i$ is narrow band

For simplification, lets consider $Weight_i(x, y)$ be composed of two factors:

- $-\alpha_j$, a constant factor (fixing the global level of the stamp).
- $-M_j(x,y)$, a mask whose values $\in [0,1]$.

When α_j is chosen, the way to find $M_j(x,y)$ so that $Weight_j(x,y)$ satisfy the conditions defined above is the following:

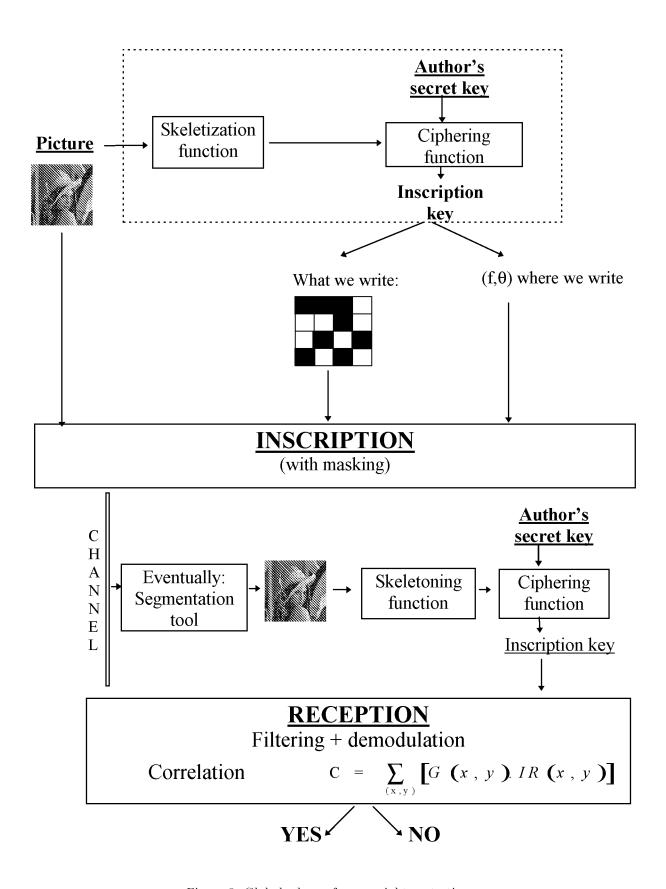

Figure 2: Global scheme for copyright protection.

- Firstly, $M_j(x, y)$ is a binary mask. $M_j(x, y) = 1$ when the local energy of the stamp pemits the masking and $M_j(x, y) = 0$ when the local energy of the stamp is too important. It is obvious that the initial choice of α_j has a direct influence on $M_j(x, y)$. Indeed, a great α_j value will lead to put most of the $M_j(x, y)$ values to zero, while a small α_j value will lead to keep most of $M_j(x, y)$ values at one.
- Secondly, $Weight_i(x, y)$ is filtered so that the stamp remains narrow band.
- After this second step, one has found a signal $\alpha_j.M_j(x,y).G(x,y)$ which is better masked than $\alpha_j.G(x,y)$. In order to really satisfy the masking criterion $\forall (x,y)$, this procedure must be repeated iteratively, taking $M_j(x,y).G(x,y)$ as new G(x,y). Experiments have shown that only two iterations are sufficient to have a result satisfying the masking criterion everywhere.

One important question remains: how to choose α_i ?

It has already been said that the more α_j increases, the more $M_j(x,y)$ has points equal to zero. A trade off has to be found by means of a defined criterion. Maximizing the correlation at the detection (by maximizing $\sum \alpha_j.M_j(x,y).G(x,y)$) could have been a good criterion, but such a criterion often tends to impose an optimum with a lot of points equal to zero and a small number of points with a great value. The addition of the so obtained watermark generally entails a degradation of the picture quality. This emphasizes the lack of the masking criterion used.

As mentioned in section 2.6, the invisibility criterion used here is an extension for real images. It appears that this extension entails some imperfections. This criterion being insufficient, some improvements have been brought thanks to experimental results.

The conclusion of these observations is that the invisibility is only strictly observed in high activity regions, where the local energy of high fequencies is important. These regions have to be favoured during the inscription in the sense that the level of the watermark will be increased in those regions while it has to be decreased in other regions.

The correction process first isolates the high activity regions (figure 3.a). Then, an homogeneization of this picture is performed by use of morphological tools, e.g. one opening and one closing (figure 3.b). After a leveling (in fact, a division by the mean or mean square value of the homogenized mask), we obtain a new mask used to multiply the picture local energy and so, giving an advantage to regions of highfrequency energy in comparison with other areas. After that correction, the process is identical to the one described previously. Moreover, the complexity is not increased. Indeed, we first work on the inscription at high frequencies (where there is no quality problems). The value of high frequency local energy is then used for the calculation of the correcting mask used for inscription at lower frequencies. The correction scheme is drawn in the following schema.

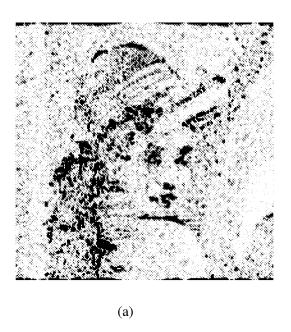

4.2 Detection

The aim is to detect if a watermark has been embedded. This can be done with the use of a correlation, but first it is necessary to isolate the watermark and then to demodulate it in order to reconstruct something that is highly correlated with the basic information (the grid).

The formulation of the watermark is:

$$W(x,y) = \sum_{j \in K} A_j . cos(f_{x_j}.x + f_{y_j}.y)$$

$$\tag{6}$$

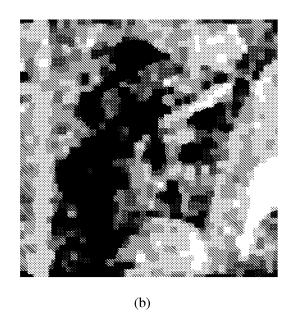

Figure 3: Correcting mask for Lena: (a) Areas of high frequencies, (b) Morphological homogeneization of the mask.

$$where A_i = \alpha_i.G(x, y).M(x, y) \tag{7}$$

In this expression, M(x, y) adjusts the level of the grid in order it becomes invisible, it is called a mask, and its maximal value is one.

 α_i is a constant that used to normalize the mask, it must be as high as possible.

The detection is divided in three steps: teh demodulation, the correlation and the decision.

• Demodulation

$$I_W(x,y) = \sum_{j \in K} A_j . cos(f_{x_j}.x + f_{y_j}.y) + I_O + N(x,y)$$
(8)

where $I_W(x, y)$ is the watermarked picture, $I_O(x, y)$ is the original picture and N(x, y) is an additive noise from the channel.

The demodulation consists in multiplying I_W by $cos(f_{x_j}.x + f_{y_j}.y), \forall j \in K$ and then to filter with a LP filter.

The result will be:

$$D_j(x,y) = \frac{1}{2} A_j(x,y) + N^*(x,y)$$
(9)

 $N^{\star}(x,y)$ depends on the image and on the additive noise. The other parts of the stamp will be eliminated by the LP filter.

• Correlation It consists in multiplying the demodulated information $D(x,y) = \sum_{j \in K} D_j(x,y)$ with the basic grid G(x,y). If the picture has not been too deteriorated, D(x,y) and G(x,y) should be similar.

$$C = \sum_{j \in K} \sum_{x,y} D_j(x,y).G(x,y)$$

$$\tag{10}$$

$$= \sum_{j \in K} \alpha_j \sum_{x,y} [G^2(x,y).M_j(x,y) + G(x,y).N^*(x,y)]$$
 (11)

In 11, the first term is even greater than the second, because G and N^* have null average values.

So C exclusively depends on the watermark value.

in the case the grid is not the good one, the correlation gives:

$$C^* = \sum_{j \in K} \alpha_j \sum_{x,y} G(x,y) \cdot G^*(x,y) \cdot M_j(x,y)$$

$$\tag{12}$$

 $C^{\star} \ll C$ if the choice of the basic information has been appropriate.

• decision

The detection algorithm performs demodulations and correlations at diverse frequencies and with diverse grids. The decision is made after the comparison of these correlations.

5 RESULTS

The first and probably mosty important result is the invisibility of the stam in all images that were tested. Figure 4.a and b compares the original and stamped picture for Lena. In figure 4.e, omne observes the watermark that was added to the original picture.

Two methods were used to determine whether an image is watermarked or not. The first one consists in comparing the result of C the correlation made with the right grid G(x,y) from the right key with C^* the correlation made with $G^*(x,y)$, the grid obtained by random keys see 12. If the picture is watermarked, the correlation with the right key is even greater than the random correlations. The results below (Figure 5) show the pertinence of this method.

The second method uses a grid G(x, y) formed from a MLS sequence, having good correlation properties. Correlations are made with shifted versions of the basic grid. Due to these good correlation properties, the correlation with the tright grid gives a result even greater than the correlations with shifted grids. Results are presented below (figure 4.c and d), if a picture is watermarked, a pick appears in the center.

6 SYSTEM ROBUSTNESS

Many tests have been performed concerning usual pictures deteriorations in image processing like blurring and compression. The inspection of these results are quite satisfying, but expected due to the frequency approach. For all classical pirate attacks like zoom, cropping, overwatermarking it is not as simple. The overwatermarking makes no problem, the presence of the watermark is still detected. But for zoom and cropping, the remaing point is to find a few tools permitting to complete the process. The concept of these tools is already defined but yet no implementation has been acheived.⁷

7 CONCLUSION

The process developed here allows the watermarking of the ownership of any picture. The perceptual approach used here is probably the best one, that is why the results obtained are so satisfying compared with other methods and this method is so performant. Nevertheless studies are still running to acheive a new goal, consisting in

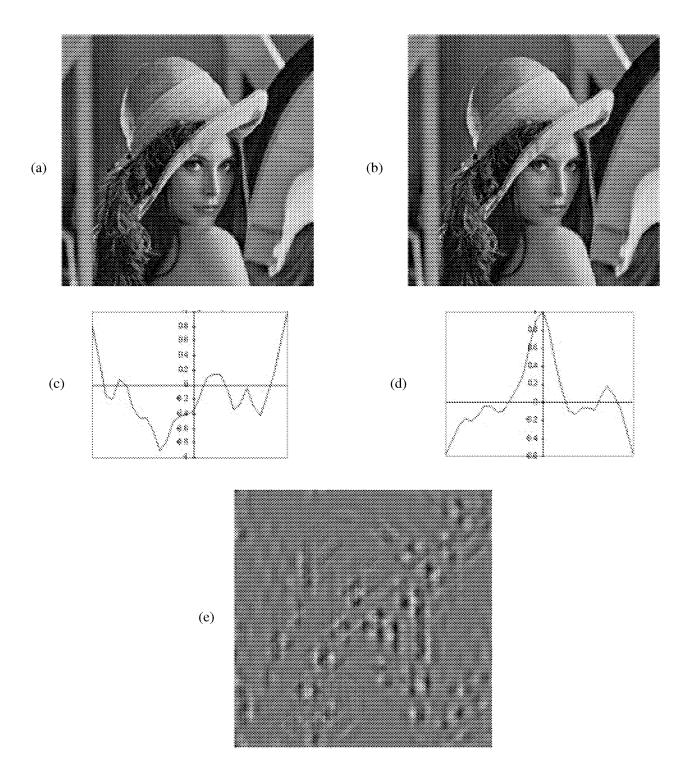

Figure 4: Results for Lena: (a) Original, (b) Watermarked one, (c) Correlation grafic for original, (d) Correlation grafic for watermarked, (e) Watermark.

Image Name	Optimal correlation	Random correlation 1	Random correlation 2	Random correlation3	Random correlation 4	Conclusion
Lena watermarked	584609	92605	133920	80534	143633	watermarked
Lena original	94538	98099	135492	76739	137120	Non watermarked

Figure 5: Results of correlation for Lena and decision.

making more information (e.g. ownership, date of marking) readable by the key owner from the watermark. This could be useful for real copyright protection protocols⁸.⁹

Privacy Act Statement

The Privacy Act of 1974 (P.L. 93-579) requires that you be given certain information in connection with your submission of the attached form related to a patent application or patent. Accordingly, pursuant to the requirements of the Act, please be advised that: (1) the general authority for the collection of this information is 35 U.S.C. 2(b)(2); (2) furnishing of the information solicited is voluntary; and (3) the principal purpose for which the information is used by the U.S. Patent and Trademark Office is to process and/or examine your submission related to a patent application or patent. If you do not furnish the requested information, the U.S. Patent and Trademark Office may not be able to process and/or examine your submission, which may result in termination of proceedings or abandonment of the application or expiration of the patent.

The information provided by you in this form will be subject to the following routine uses:

- 1. The information on this form will be treated confidentially to the extent allowed under the Freedom of Information Act (5 U.S.C. 552) and the Privacy Act (5 U.S.C. 552a). Records from this system of records may be disclosed to the Department of Justice to determine whether the Freedom of Information Act requires disclosure of these record s.
- A record from this system of records may be disclosed, as a routine use, in the course of presenting evidence to a
 court, magistrate, or administrative tribunal, including disclosures to opposing counsel in the course of settlement
 negotiations.
- 3. A record in this system of records may be disclosed, as a routine use, to a Member of Congress submitting a request involving an individual, to whom the record pertains, when the individual has requested assistance from the Member with respect to the subject matter of the record.
- 4. A record in this system of records may be disclosed, as a routine use, to a contractor of the Agency having need for the information in order to perform a contract. Recipients of information shall be required to comply with the requirements of the Privacy Act of 1974, as amended, pursuant to 5 U.S.C. 552a(m).
- 5. A record related to an International Application filed under the Patent Cooperation Treaty in this system of records may be disclosed, as a routine use, to the International Bureau of the World Intellectual Property Organization, pursuant to the Patent Cooperation Treaty.
- 6. A record in this system of records may be disclosed, as a routine use, to another federal agency for purposes of National Security review (35 U.S.C. 181) and for review pursuant to the Atomic Energy Act (42 U.S.C. 218(c)).
- 7. A record from this system of records may be disclosed, as a routine use, to the Administrator, General Services, or his/her designee, during an inspection of records conducted by GSA as part of that agency's responsibility to recommend improvements in records management practices and programs, under authority of 44 U.S.C. 2904 and 2906. Such disclosure shall be made in accordance with the GSA regulations governing inspection of records for this purpose, and any other relevant (i.e., GSA or Commerce) directive. Such disclosure shall not be used to make determinations about individuals.
- 8. A record from this system of records may be disclosed, as a routine use, to the public after either publication of the application pursuant to 35 U.S.C. 122(b) or issuance of a patent pursuant to 35 U.S.C. 151. Further, a record may be disclosed, subject to the limitations of 37 CFR 1.14, as a routine use, to the public if the record was filed in an application which became abandoned or in which the proceedings were terminated and which application is referenced by either a published application, an application open to public inspections or an issued patent.
 - 9. A record from this system of records may be disclosed, as a routine use, to a Federal, State, or local law enforcement agency, if the USPTO becomes aware of a violation or potential violation of law or regulation.

Information:

A U.S. Patent Number Citation or a U.S. Publication Number Citation is required in the Information Disclosure Statement (IDS) form for autoloading of data into USPTO systems. You may remove the form to add the required data in order to correct the Informational Message if you are citing U.S. References. If you chose not to include U.S. References, the image of the form will be processed and be made available within the Image File Wrapper (IFW) system. However, no data will be extracted from this form. Any additional data such as Foreign Patent Documents or Non Patent Literature will be manually reviewed and keyed into USPTO systems.

Total Files Size (in bytes):

1558117

This Acknowledgement Receipt evidences receipt on the noted date by the USPTO of the indicated documents, characterized by the applicant, and including page counts, where applicable. It serves as evidence of receipt similar to a Post Card, as described in MPEP 503.

New Applications Under 35 U.S.C. 111

If a new application is being filed and the application includes the necessary components for a filing date (see 37 CFR 1.53(b)-(d) and MPEP 506), a Filing Receipt (37 CFR 1.54) will be issued in due course and the date shown on this Acknowledgement Receipt will establish the filing date of the application.

National Stage of an International Application under 35 U.S.C. 371

If a timely submission to enter the national stage of an international application is compliant with the conditions of 35 U.S.C. 371 and other applicable requirements a Form PCT/DO/EO/903 indicating acceptance of the application as a national stage submission under 35 U.S.C. 371 will be issued in addition to the Filing Receipt, in due course.

New International Application Filed with the USPTO as a Receiving Office

If a new international application is being filed and the international application includes the necessary components for an international filing date (see PCT Article 11 and MPEP 1810), a Notification of the International Application Number and of the International Filing Date (Form PCT/RO/105) will be issued in due course, subject to prescriptions concerning national security, and the date shown on this Acknowledgement Receipt will establish the international filing date of the application.

processing part 8.

PURPOSE:To permit any person who owns a right in accordance with respective disclosure level to approach a targeted document without permission or a password and to perform security management in a wide range flexibly by performing a document by attaching disclosure level information and disclosuer information including disclosure destination information. CONSTITUTION: The disclosure information consists of the disclosure level information representing to what degree it can be disclosed and the disclosure destination information representing to whom it can be disclosed. The disclosure information inputted from an input device 1 is sent from an input part 2 to a document processing part 8. and it is delivered from the document processing part 8 to a document disclosure information registration part 11. The document disclosure information registration part 11 retrieves a corresponding document file name from a document map file 13, and furthermore, retrieves a disclosure information managing file name from a document managing file 16, and sets the disclosure information on a corresponding document disclosure information managing file 20. When document disclosure is requested from the input part 1 by a user, the document disclosure information managing part 11 checks the disclosure information by the request of the document

【従来の技術】近年、オフィス業務の効率化、ペーパー

置は、システム開発以来オフィス内で急速に普及し、そ のシステムに対する要求も、使用範囲として専門に文書 を入力管理する業務担当者から、個人および一般作業グ ループへと広がり、運用形態としてもさまざまな業務お よび文書への適応が求められてきており、文書の共有形 態と文書のセキュリ ティ機構においてもさまざまな運 用形態に適合できる機能が要求されている。

【0003】このような要求に対応するために、従来の 電子ファイル装置では、基本的には文書ごとにパーミッ 蓄積した前記文書の処理の許可レベルとして該当文書の 10 ションあるいはパスワード等を設け、文書に対する操作 レベルと操作範囲を設定し、文書の保護を実現してい た。この場合、文書に対して許される操作のレベルとし て、該当の文書に対しての読み出し、書き込みの許可を 与えるかどうかという許可レベルを設定し、また、許可 レベルを与え得る操作者として、該当の文書の持ち主あ るいは持ち主が属しているグループのメンバーあるいは 全員などの設定を行なっていた。

[0004]

【発明が解決しようとする課題】しかしながら、上記の 類ノードと呼ぶ文書の集合として処理し、前記分類ノー 20 従来の構成では、文書の保護を文書ごとに設けたパスワ ード等により行なっており、許可レベルが文書の読み出 しおよび書き込みのみに限られているため、あるいは許 可レベルを与え得る操作者としてユーザおよび単一グル ープ等に限定されているため、さまざまな運用形態に適 合できる柔軟なセキュリティ機構を提供することができ ないという問題点を有していた。

【0005】本発明は、このような従来の問題点を解決 するもので、文書に対する公開レベルの設定を細かに行 なえるようにするとともに、公開先をユーザおよびグル 類ノードの一覧表示の許可、該当分類ノードおよび該当 30 ープの区別なく複数設定可能とし、柔軟かつ広範囲なセ キュリティ機構を備えた電子ファイル装置を提供するこ とを目的とする。

[0006]

【課題を解決するための手段】上記目的を達成するため に、本発明の電子ファイル装置は、1以上のファイルで 構成された文書ごとに、公開程度を表わす公開レベル情 報と公開相手を表わす公開先情報を含む公開情報を付加 して管理するようにしたものである。

【0007】本発明はまた、1以上のファイルで構成さ および分類ノードを処理する文書/分類ノード処理部と 40 れた文書を分類ノードで階層的に管理し、文書と同様に 各分類ノードについても公開情報を付加して管理するよ うにしたものである。

> 【0008】本発明はまた、公開情報に公開期間を加え るようにしたものである。

[0009]

【作用】したがって、本発明によれば、文書を公開レベ ル情報と公開先情報を含む公開情報を付加して管理する ことにより、それぞれの公開レベルに対応した権利を有 する者であれば、パーミッションやパスワードがなくて レス化、省スペース化などを目的とする電子ファイル装 50 も誰でも目的の文書に近づくことができ、柔軟で広範囲

なセキュリティ管理を行なうことができる。

【0010】また本発明によれば、文書が分類ノードに より階層的に管理されている場合には、分類ノードにつ いても文書と同様に公開情報を付加して管理することに より、より柔軟で極め細かなセキュリティ管理を行なう ことができる。

【0011】さらに本発明によれば、公開情報に公開期 間を加えることにより、さらに柔軟で極め細かなセキュ リティ管理を行なうことができる。

[0012]

【実施例】

(実施例1)以下、本発明の実施例について、図面を参 照しながら説明する。図1は本発明の第1の実施例にお ける電子ファイル装置の概略構成を示すプロック図であ る。図1において、1はユーザがデータを入力する入力 装置、2は入力装置1を制御する入力部、3は印刷の制 御を行なう印刷部、4は印刷を行なう出力装置、5は表 示を制御する表示部、6は表示を行なう表示装置、7は 文書の作成を行なう文書作成部、8は装置全体の制御を からの指示を受け、文書のフォーマット変換を行なうフ オーマット変換部、10は作成された文書の蓄積保管お よび取り出しを管理する文書蓄積/取出部、11は文書 の公開情報を設定管理および検査する文書公開情報管理 部、12は文書および各種管理情報の蓄積を行なう蓄積 媒体、13は文書を探し出すための情報を格納する文書 マップファイル、14、15は複数のファイルによって 構成された論理的な集まりを表わす文書、16は文書を 構成するファイル群を管理するための情報を格納する文 書管理ファイル、17、18、19は個々の文書を構成 *30* で処理が行なわれる。 する文書実体ファイル、20は公開先情報および公開レ ベル情報からなる公開情報を格納する文書公開情報管理 ファイルである。

【0013】以上のように構成された電子ファイル装置 について以下その動作を説明する。まず、文書を構成す るファイル群が管理されるまでの処理を説明する。ユー ザにより作成された文書が人力装置1を通じて人力部2 または文書作成部7から文書処理部8へと送られると、 文書を構成するファイル群は文書処理部8から文書蓄積 /取出部10を経て蓄積媒体12に送られる。蓄積媒体 40 12では、文書蓄積/取出部10によって図2(a)に 示す文書管理ファイル16が作成されて文書管理ファイ ル名と文書名とが登録され、図2(c)に示す文書マッ プファイル13にその文書名および文書管理ファイル名 からなる文書マップ情報が登録される。次に、図2 (b) に示す文書公開管理情報ファイル20が作成さ れ、文書管理ファイル16に文書名と公開情報管理ファ イル名と文書実体ファイル名が登録され、その文書に対 する構成が管理される。以上のように登録され管理され た文書は、文書蓄積/取出部10によって文書を構成す50判定し(ステップ37)、公開レベルがこの条件を満た

るファイル群が取り出され、文書処理部8を経て表示お よび印刷などの文書処理が行なわれる。

【0014】次に、作成された文書の公開情報の初期設 定を行なう場合について説明する。公開情報は、どの程 度まで公開してよいかを示す公開レベル情報と、だれ (個人またはグループ) に公開してよいかを示す公開先 情報からなる。入力装置1から入力された公開情報は、 入力部2から文書処理部8へ送られ、文書処理部8から 文書公開情報登録部11へ渡される。文書公開情報管理 10 部11は、まず図2に示す文書マップファイル13か ら、該当の文書管理ファイル名を探し、さらに文書管理 ファイル16から公開情報管理ファイル名を探し、該当 の文書公開情報管理ファイル20に公開情報を設定す る。文書公開情報管理ファイル20に設定された公開情 報は、本実施例では、ユーザ1に対しては公開レベルと してEで表わされる該当文書の一覧表示の許可、グルー プ1に対しては公開レベルとしてBで表わされる該当文 書の内容表示の許可、グループ2に対しては公開レベル としてCで表わされる該当文書の複写印刷の許可、ユー 行ない、文書を処理する文書処理部、9は文書処理部8 20 ぜ2に対しては公開レベルとしてIで表わされる該当文 書の内容更新の許可等が設定されている。公開レベル は、Eを最下位としてB、C、Iの順番に高くなってお り、上位のレベルはその下位のレベルをすべて含むよう に定義されている。このようにして公開情報の設定を行 なったある文書に対し、入力部1からユーザまたはゲル ープが文書公開を要求した場合は、文書処理部8の要求 により文書公開情報管理部11が公開情報のチェックを 行ない、文書処理部8へ処理結果の通知を行なった後、 フォーマット変換部9を経由して、表示部5、印刷部3

> 【0015】以下、図3を参照して文書公開情報管理部 11における公開情報のチェック処理について説明をす る。まず入力部1から例えばユーザ1による文書の公開 レベルBの要求が入力された場合、文書処理部8からユ ーザ名とユーザ1の属している全てのグループ名からな る公開先情報群および公開レベルが文書公開情報管理部 11に渡され(ステップ31)、文書公開情報管理部1 1は、この要求に対し文書マップファイル13を読み込 み、該当の文書管理ファイル名を探し(ステップ3 2)、探し出した文書管理ファイル16から該当文書の 公開情報管理ファイル名を探す(ステップ33)。探し 出した文書公開情報管理ファイル20を読み出し、公開 先情報群の一つの情報を文書公開情報管理ファイル20 の公開情報の中から検出する(ステップ34)。検出が できなかった場合は、公開先情報群の全てのチェックが 終了するまでこの処理を繰り返し(ステップ35)、チ エックが終了した場合は異常値を文書処理部8へ返す (ステップ36)。検出できた場合は、公開レベルの設 定がB以上(Cおよび Iを含む。)のレベルかどうかを

している場合は正常値を文書処理部8へ返し(ステップ 38)、満たしていない場合は、公開先情報群のチェッ クが全て終了しているかを判定する(ステップ35)。 文書処理部8は、文書公開情報管理部11からの公開情 報のチェック結果に従って処理を行なう。

【0016】このように、上記第1の実施例によれば、 1以上のファイルで構成された文書ごとに、公開程度を 表わす公開レベル情報と公開相手を表わす公開先情報と を含む公開情報を任意に設定して管理する手段を備えて いるので、それぞれの公開レベルに対応する権利を有す る者であれば、パーミッションやパスワードによらず に、誰でも目的の文書に近づくことができ、柔軟なセキ ュリティ管理を行なうことができる。

【0017】(実施例2)次に、本発明の第2の実施例 について図面を参照しながら説明する。図4は本発明の 第2の実施例における電子ファイル装置の概略構成を示 すプロック図であり、図1に示した第1の実施例と同じ 構成要素には同じ符号を付してある。図4において、1 はユーザがデータを入力する入力装置、2は入力装置1 は印刷を行なう出力装置、5は表示を制御する表示部、 6は表示を行なう表示装置、7は文書の作成を行なう文 書作成部、9は文書のフォーマット変換を行なうフォー マット変換部、11は文書の公開情報を設定管理および 検査する文書公開情報管理部、12は文書および各情報 の蓄積を行なう蓄積媒体、13は文書を探し出すための 情報を格納する文書マップファイル、14、15は複数 のファイルによって構成された論理的な集まりを表わす 文書、16は文書を構成するファイル群を管理するため の情報を格納する文書管理ファイル、17、18、19 は個々の文書を構成する文書実体ファイル、20は公開 先および公開レベルからなる公開情報を格納する文書公 開情報管理ファイルであり、以上は図1の構成と同様な ものである。図1の構成と異なるのは、装置全体の制御 を行ない文書を処理する文書処理部8を分類ノードを処 理する機能を加えた文書/分類ノード処理部40とした ことと、文書を階層的に分類した情報を設定管理する分 類ノード管理部41、分類ノードの公開レベルを設定管 理する分類ノード公開情報管理部42、文書を階層的に 分類している分類ノード43、44、45、46、4 7、48、分類ノードの公開先および公開レベルからな る公開情報を格納する分類ノード公開情報管理ファイル 49を加えたことである。分類ノード公開情報管理ファ イル49は、各分類ノード43~48のそれぞれに設け られている。

【0018】以上のように構成された電子ファイル装置 の動作について、まず文書の登録を行なう場合について 説明する。ユーザにより作成された文書は、入力装置1 を通じて入力部2または文書作成部7から文書/分類/

その文書を登録される登録場所分類ノード名がユーザに より入力装置1から入力される。文書/分類ノード処理 部40は、分類ノード公開情報管理部42で登録場所の 分類ノードの公開レベルのチェックを行なった後、分類 ノード管理部41に文書を構成するファイル群の登録を 依頼する。依頼を受けた分類ノード管理部41は、蓄積 媒体12に階層的に設定されている分類ノードをたぐ り、ユーザにより指定された登録場所の分類ノードを探 し出し、該当分類ノード下に文書を構成するファイル群 10 を登録する。以降、登録場所の分類ノード内でのファイ ル群の管理は実施例1と同様にして行なわれる。

【0019】次に、登録された文書を閲覧する場合につ いて説明する。入力装置1からある文書に対して閲覧要 求が入力部2を経て文書/分類ノード処理部40へ通知 されると、その閲覧文書名と文書が存在する分類ノード 名が文書/分類ノード処理部40へ渡される。文書/分 類ノード処理部40は、分類ノード公開情報管理部42 における分類ノードの公開情報のチェックを行なった 後、さらに文書公開情報管理部11に文書の公開情報の を制御する入力部、3は印刷の制御を行なう印刷部、4 20 チェックを依頼する。文書公開情報管理部11は、分類 ノードをたぐり、指定の分類ノード下で実施例1と同様 の処理を行なう。その結果に従って文書/分類ノード処 理部40は、分類ノード管理部41に該当文書のファイ ル群の取り出しを依頼し、文書の処理を行なう。

【0020】分類ノードおよび文書の公開レベル設定内 容と効果は、図5に示すような形で定義されている。分 類ノードに設定可能な公開レベルは、それぞれ実施例1 の文書に設定する公開レベルと同様に、Eで表わされる 存在明示許可、Bで表わされる閲覧許可、Cで表わされ 30 る複写印刷許可、Iで表わされる登録更新許可の4レベ ルとなっている。分類ノードは、最上位を1つのルート ノードとして、その下に枝分かれした階層構造になって いる。したがって、ある分類ノードに対してEが許可さ れると、階層構造上において該当分類ノードが属してい る分類ノード以上の分類ノード名の一覧表示が許可さ れ、該当分類ノードの存在が確認される。またある文書 に対してEが許可されると、該当文書が属している分類 ノードにおける文書の一覧表示が許可され、該当文書の 存在が確認される。またある分類ノードに対してBが許 40 可されると、階層構造上において該当分類ノード以上で B以下のレベル(B、E)が設定されている分類ノード およびそれらに属している文書の一覧表示が許可され、 該当分類ノードの内容が確認可能となる。またある文書 に対してBが許可されると、該当文書の内容表示が許可 され、該当文書の内容が確認可能となる。さらにある分 類ノードに対してCが許可されると、該当分類ノードが 複写元分類ノードとして設定可能となり、階層構造上に おいて該当分類ノード以上でC以下のレベル(B、E) が設定されている分類ノード群およびそれらに属してC ード処理部40へ送られるとともに、登録文書名および 50 以下のレベルが設定されている文書群がまとめて複写印

刷可能となる。またある文書に対してCが許可される と、階層構造上において該当文書が属している分類ノー ド以上の分類ノードにおいてC以下のレベルが設定され ている文書が複写印刷可能となる。さらにまた、ある分 類ノードに対してIが許可されると、階層構造上におい て該当分類ノード以上でI以下のレベル(I、C、B、 E) が設定されている分類ノード群およびそれらに属し ているすべての文書群について、移動、削除、更新、新 規作成等が可能になる。文書に対してIが許可される が可能となる。

【0021】次に、図6および図7を参照して分類ノー ドの公開情報チェック処理について説明する。まず入力 装置1から例えばユーザ2による分類ノードの公開レベ ルBの要求が入力されると、文書/分類ノード処理部4 0からユーザ2による分類ノードの公開レベルBの要求 が分類ノード公開情報管理部42に通知される(ステッ プ61)。分類ノード公開情報管理部42は、この要求 に対し指定の分類ノードに移動し(ステップ62)、移 ド公開情報管理ファイル49を探し出し(ステップ6 3)、公開先情報群の一つの情報を分類ノード公開情報 管理ファイル49の公開情報の中から検出する(ステッ プ64)。検出できなかった場合は、公開先情報群の全 てのチェックが終了するまでこの処理を繰り返し(ステ ップ65)、チェックが終了した場合は、異常値を文書 /分類ノード処理部40へ返す(ステップ66)。検出 できた場合は公開レベルの設定がB以上のレベルかどう かを判定し(ステップ67)、公開レベルがこの条件を テップ68)、満たしていない場合は、公開先情報群の チェックが全て終了しているかを判定する(ステップ6 5)。文書/分類ノード処理部40は、分類ノード公開 情報管理部42からの公開情報のチェック結果に従って 処理を行なう。

【0022】このように、上記第2の実施例によれば、 1以上のファイルで構成された文書を分類ノードで階層 的に管理し、文書については上記第1の実施例と同様に 管理するとともに、分類ノードについても同様に公開情 なセキュリティ管理を行なうことができる。

【0023】(実施例3)次に、本発明の第3の実施例 について説明する。図8は本発明の第3の実施例におけ る電子ファイル装置の概略構成を示すプロック図であ り、図4に示した第2の実施例と同じ構成要素には同じ 符号を付してある。図8において、1はユーザがデータ を入力する入力装置、2は入力装置1を制御する入力 部、3は印刷の制御を行なう印刷部、4は印刷を行なう 出力装置、5は表示を制御する表示部、6は表示を行な

文書のフォーマット変換を行なうフォーマット変換部、 12は文書および各情報の蓄積を行なう蓄積媒体、13 は文書を探し出すための情報を格納する文書マップファ イル、14、15は複数のファイルによって構成された 論理的な集まりを表す文書、17、18、19は個々の 文書を構成する文書実体ファイル、40は装置全体の制 御を行ない文書と分類ノードを処理する文書/分類ノー ド処理部、41は文書を階層的に分類した情報を設定管 理する分類ノード管理部であり、以上は図4の構成と同 と、既に存在するすべての文書について同様な内容更新 10 様なものである。図4の構成と異なるのは、文書の公開 レベルを設定管理する文書公開情報管理部11を、これ に文書の公開期間の設定管理を行なう機能を加えて文書 公開情報管理部80としたことと、分類ノードの公開レ ベルを設定管理する分類ノード公開情報管理部42を、 これに分類ノードの公開期間の設定管理を行なう機能を 加えて分類ノード公開情報管理部81としたことと、文 書の公開先および公開レベルからなる公開情報を格納す る文書公開情報管理ファイル20を、これに公開期間を 設定可能として文書公開情報管理ファイル82としたこ 動先の該当分類ノードで固定ファイル名である分類ノー 20 とと、分類ノードの公開先および公開レベルからなる公 開情報を格納する分類ノード公開情報管理ファイル49 を、これに公開期間を設定可能として分類ノード公開情

【0024】次に、以上のように構成された電子ファイ ル装置の動作について説明するが、文書の登録処理およ び登録された文書を閲覧する処理については実施例2と 同様なので、ここでは文書および分類ノードの公開期間 の設定を行なう処理について説明する。まず入力装置1 から入力された公開先および公開レベルからなる公開情 満たしている場合は正常値を文書処理部40へ返し(ス 30 報と公開期間は、入力部2から文書/分類ノード処理部 40へ送られ、文書/分類ノード処理部40の指示によ り文書公開情報管理部80および分類ノード公開情報管 理部81が、それぞれ図9に示す文書公開情報管理ファ イル82および分類ノード公開情報管理ファイル83の 中に、公開期間および公開情報をそれぞれ設定する。

報管理ファイル83としたことである。

【0025】図10および図11は分類ノードおよび文 書の公開期間のチェックを行なう処理を示している。図 10において、入力装置1から例えばユーザ2による分 類ノードの公開レベルBのチェックが要求された場合、 報を付加して管理することにより、より柔軟で極め細か 40 文書/分類ノード処理部40からユーザ2による分類ノ ードの公開レベルBの要求が分類ノード公開情報管理部 81に通知される(ステップ101)。分類ノード公開 情報管理部81は、本要求に対し指定の分類ノードに移 動し(ステップ102)、移動先の該当分類ノードで固 定ファイル名である分類ノード公開情報管理ファイル6 3を探し出し(ステップ103)、図9に示す分類ノー ド公開情報管理ファイル83から公開期間の判定を行な い(ステップ104)、公開期間内であれば正常値を返 し(ステップ107)、公開期間外ならば以降、分類ノ う表示装置、7は文書の作成を行なう文書作成部、9は *50* ードの公開情報のチェックを実施例2と同様、まず公開

先情報群の一つの情報を分類ノード公開情報管理ファイ ル83の公開情報の中から検出し(ステップ105)、 検出できなかった場合は、公開先情報群の全てのチェッ クが終了するまでこの処理を繰り返し(ステップ10 8)、チェックが終了した場合は、異常値を文書/分類 ノード処理部40へ返す(ステップ109)。検出でき た場合は、公開レベルの設定がB以上のレベルかどうか を判定し(ステップ106)、公開レベルがこの条件を 満たしている場合は、正常値を文書/分類ノード処理部 40へ返し(ステップ107)、満たしていない場合 10 ック処理を示すフロー図 は、公開先情報群のチェックが全て終了しているかを判 定する(ステップ108)。文書/分類ノード処理部4 0は、分類ノード公開情報管理部81からの公開情報の チェック結果に従って処理を行なう。

[0026] また、[011] において、例えばユーザ1に よる文書の公開レベルBのチェックが要求された場合 (ステップ111)、文書/分類ノード処理部40から ユーザ1による文書公開の要求が文書情報管理部80に 通知され、文書公開情報管理部80は、本要求に対し以 **降、文書の公開情報を設定管理しているファイル群から** 20 間のチェック処理を示す別のフロー図 実施例1と同様に、文書管理ファイル16を探し(ステ ップ112)、次いで文書公開情報管理ファイル82を 探し出し(ステップ113)、図9に示す文書公開情報 管理ファイル82の公開期間の判定を行ない(ステップ 114)、公開期間内であれば正常値を返し(ステップ 117)、期間外であれば、以降、文書の公開情報のチ エックを実施例1と同様に処理し(ステップ115、1 16、118)、その処理結果を文書/分類ノード処理 部40へ返す(ステップ119)。

【0027】このように、上記第3の実施例によれば、 30 9 フォーマット変換部 公開情報に公開期間を加えることにより、さらに柔軟で 極め細かなセキュリティ管理を行なうことができる。

[0028]

【発明の効果】以上のように、本発明によれば、文書を 公開レベル情報と公開先情報を含む公開情報を付加して 管理することにより、それぞれの公開レベルに対応した 権利を有する者であれば、パーミッションやパスワード がなくても誰でも目的の文書に近づくことができ、柔軟 で広範囲なセキュリティ管理を行なうことができる。

【0029】また本発明によれば、文書が分類ノードに 40 19 文書実体ファイル より階層的に管理されている場合には、分類ノードにつ いても文書と同様に公開情報を付加して管理することに より、より柔軟で極め細かなセキュリティ管理を行なう ことができる。

【0030】さらに本発明によれば、公開情報に公開期 間を加えることにより、さらに柔軟で極め細かなセキュ リティ管理を行なうことができる。

This collection of information is required by 37 CFR 1.97 and 1.98. The information is required to obtain or retain a benefit by the public which is to file (and by the USPTO to process) an application. Confidentiality is governed by 35 U.S.C. 122 and 37 CFR 1.14. This collection is estimated to take 1 hour to complete, including gathering, preparing and submitting the completed application form to the USPTO. Time will vary depending upon the individual case. Any comments on the amount of time you require to complete this form and/or suggestions for reducing this burden, should be sent to the Chief Information Officer, U.S. Patent and Trademark Office, U.S. Department of Commerce, P.O. Box 1450, Alexandria, VA 22313-1450. DO NOT SEND FEES OR COMPLETED FORMS TO THIS ADDRESS. **SEND TO: Commissioner for Patents, P.O. Box 1450, Alexandria, VA 22313-1450.**

Privacy Act Statement

The Privacy Act of 1974 (P.L. 93-579) requires that you be given certain information in connection with your submission of the attached form related to a patent application or patent. Accordingly, pursuant to the requirements of the Act, please be advised that: (1) the general authority for the collection of this information is 35 U.S.C. 2(b)(2); (2) furnishing of the information solicited is voluntary; and (3) the principal purpose for which the information is used by the U.S. Patent and Trademark Office is to process and/or examine your submission related to a patent application or patent. If you do not furnish the requested information, the U.S. Patent and Trademark Office may not be able to process and/or examine your submission, which may result in termination of proceedings or abandonment of the application or expiration of the patent.

The information provided by you in this form will be subject to the following routine uses:

- The information on this form will be treated confidentially to the extent allowed under the Freedom of Information Act (5 U.S.C. 552) and the Privacy Act (5 U.S.C. 552a). Records from this system of records may be disclosed to the Department of Justice to determine whether the Freedom of Information Act requires disclosure of these record s.
- 2. A record from this system of records may be disclosed, as a routine use, in the course of presenting evidence to a court, magistrate, or administrative tribunal, including disclosures to opposing counsel in the course of settlement negotiations.
- 3. A record in this system of records may be disclosed, as a routine use, to a Member of Congress submitting a request involving an individual, to whom the record pertains, when the individual has requested assistance from the Member with respect to the subject matter of the record.
- 4. A record in this system of records may be disclosed, as a routine use, to a contractor of the Agency having need for the information in order to perform a contract. Recipients of information shall be required to comply with the requirements of the Privacy Act of 1974, as amended, pursuant to 5 U.S.C. 552a(m).
- 5. A record related to an International Application filed under the Patent Cooperation Treaty in this system of records may be disclosed, as a routine use, to the International Bureau of the World Intellectual Property Organization, pursuant to the Patent Cooperation Treaty.
- 6. A record in this system of records may be disclosed, as a routine use, to another federal agency for purposes of National Security review (35 U.S.C. 181) and for review pursuant to the Atomic Energy Act (42 U.S.C. 218(c)).
- 7. A record from this system of records may be disclosed, as a routine use, to the Administrator, General Services, or his/her designee, during an inspection of records conducted by GSA as part of that agency's responsibility to recommend improvements in records management practices and programs, under authority of 44 U.S.C. 2904 and 2906. Such disclosure shall be made in accordance with the GSA regulations governing inspection of records for this purpose, and any other relevant (i.e., GSA or Commerce) directive. Such disclosure shall not be used to make determinations about individuals.
- 8. A record from this system of records may be disclosed, as a routine use, to the public after either publication of the application pursuant to 35 U.S.C. 122(b) or issuance of a patent pursuant to 35 U.S.C. 151. Further, a record may be disclosed, subject to the limitations of 37 CFR 1.14, as a routine use, to the public if the record was filed in an application which became abandoned or in which the proceedings were terminated and which application is referenced by either a published application, an application open to public inspections or an issued patent.
 - 9. A record from this system of records may be disclosed, as a routine use, to a Federal, State, or local law enforcement agency, if the USPTO becomes aware of a violation or potential violation of law or regulation.

Workshop on Digital Rights Management for the Web

World Wide Web Consortium

22-23 January 2001

INRIA - Sophia-Antipolis, France

2004, Route des Lucioles

WORKSHOP PROGRAM
Workshop Notes & Presentations
Workshop Summary Report
Submitted Position Papers
Participants
Mailing List
Call for Participation
Background Reference Material

Important dates

Papers submission deadline: 22 December 2000 Registration deadline: 12 January 2001

Workshop meter

On 20 December 2000: 62 registrations, 41 position papers received, and 69 persons on the mailing list.

Last update \$Date: 2001/04/26 16:55:07 \$ by \$Author: rigo \$

[Minutes Overview] [Workshop Home] [Previous:Publishers Requirements] [Next:Architecture: Interoperability and Standards]

Minutes from the Architecture/Infrastructure Session

Please refer to the position-papers and slides for authoritative answers. The following minutes are only a snapshot of Presentations and Discussions

- INDECS Framework Data Definitions Godfrey Rust (Indecs Project)
- URI's and Object Identifiers Dan Connolly (W3C)
- Principles for Standardization and Interoperability in Web-based Digital Rights Management John Erickson (Hewlett-Packard)
- Open Digital Rights Management Renato lannella (IPR Systems)
- Digital Object Identifier Norman Paskin (Int. DOI Foundation)
- Discussion

Godfrey Rust (<indecs> Project), INDECS Framework Data Definitions

See also the [Slides (ppt)] and the <indecs> Framework

The <indecs> project ended 2000, now we are new company called <indecs> framework. Look at our online document: Principles, model, and data dictionary, June 2000.

We see DRM in terms of metadata, as a metadata problem. The description is covered in Open eBook, ONIX, and my company.

Here is the scheme:

- 1. people make stuff
- 2. people use stuff

3. people do deals about stuff

The scope is stuff. This can be characterized in terms of:

- 1. Parties
- 2. Creations
- 3. Agreements

Rust projected a diagram showing the high granularity in the <indecs> model, with hierarchy of parties and agreements. He noted that you must pass along the metadata in a structured defined way to permit computational processes.

The following things are required:

- functional granularity: you must be able to identify stuff at any level of granularity
- unique id
- who says so designated authority
- appropriate access (who can do what)

In the 1980s, there were few schemes for description, today there are many, lists ten major ones, including MPEG-7, ONIX, SMPTE, RIAA/IFPI, and several more.

Here are the <indecs> principles:

- All metadata is just a view (example: about the work versus about the manifestation, and more, each of which may have its own rights)
 - views must not be confused; mistaken identity can be disastrous to rights management
 - o views need to be interoperable
- Almost all terms need identifiers
 - o values must be defined and identified
 - o need standard vocabularies and ontologies.
 - automation need for disambiguity. There is an existing vocabulary for some things: territories, language, currency, date/time and some others. But we need dozens of others.
- Events are key to interoperability
 - o most metadata is stuff or people based
 - o events description are key to rights management

Godfrey Rust gave an example how this would work:

- 1. make event the first class object, e.g., Rust creating these slides
- 2. then all the other elements are attributes: author, date, title, etc.
- next event, e.g., Rust showing this Slide -- it has attributes too and references the previous event, thus connecting the creative items
- next event: Norman Paskin adapts (transforming event) these slides before he shows it at another meeting, thus creating new attributes and references to preceding events, thus connecting the creative items

This model has the same information as other metadata structures, just organized differently to serve rights management.

Here's another event that bears on rights: agreeing. What goes into the agreement is what goes into descriptive metadata, what he had, what he did. Also assertion by a trusted entity that verifies or authenticates.

Using the event structure, now have six events regarding these slide-show. See how you can use events to **integrate** descriptive and rights metadata.

But we need rights vocabularies to make this work, on a parallel with the need for vocabularies to serve descriptive metadata.

Dan Connolly [W3C], W3C URI Design Principles

See also the corresponding Activity within W3C and the slides

He outlined W3C's Philosophy of Standards: Help people do the right thing.

URIs will have a relationship to a potential DRM-Activity. Connolly also suggests that DRM discussion focus on payments and rights negotiation as much as prevention of access.

All names are ultimately local. Global naming depends on social agreements and trust. HTTP is not the only protocol. For the Web, we use DNS (Domain Name System). Don't forget, HTML is not the only file type. Things can evolve, you can use proxies and thus use an old name against new protocol. But URIs are the only thing in that arena. New protocols can be used with existing names. There is no need to change names just because you change protocols. We don't need to make new URI schemes just because we have made a new data format.

There is opacity: Don't peek inside names, names (URIs) are not user interface. Don't reinvent redirection in http, it is not a service, they are not locators. DNS supports multiple A records. Lots of administrative hierarchies fit in current http and DNS, you don't need to

invent a new URI scheme.

URIs were not designed as a user interface. Don't use a URN as a brand name. To establish a new trusted brand name, trying to wedge them into DNS is a problem, you're ought to use <title>

John Erickson (HP), Principles for Standardization and Interoperability in Web-based Digital Rights Management

See also the slides and the Position Paper

John Erickson started by re-inforcing what was already heard during previous sessions: When we think about DRM, we have to separate expression of rights information and policies from the enforcement of those rights. We have to think of a layered model, separate the expression of rights information from the info for discovery and from implementing and enforcing those rights.

What is the W3C's role here? We think W3C should recommend a platform. Erickson put emphasis on the development of a language and a protocol for IPR policy expression, discovery, and interpretation.

The W3C should not recommend a standard DRM system. But we should provide a basis for the interoperability of such systems. Core should be to find a reliable way to express and transfer rights information. Remember the design principles of the web, IPR work ought not violate them.

Erickson developed the following set of requirements:

- never interfere with users' ability to discover info (incl rights info) on the web, this is what I
 mean by universal access, so I can decide about whether to access
- always communicate the policies and technical restraints in understandable language
- policies are communicated in fair and open ways
- need for trust, need to have a basis to trust the assertions being made, need a mechanism to assure trustworthiness
- IPR information and policies must be discoverable and minimally interpretable in dependent of any given vendor's solution
- the languages and protocols must be designed for evolution
- web based mechanism must allow for owners to choose different tools and consumers to use different tools to discover and interpret rights info
- cool new content that comes along ought not break the DRM systems or break the languages and protocols

Here's our [HP publishing group] proposal: PREP (Policy and Rights Expression Platform, see the <u>Position Paper</u> for more information). It would be a framework to express and interpret the policies and info. It should complement laws and self-regulatory programs. It should be consistent with prior work, e.g., P3P.

What are the building blocks of PREP?

- · semantics policy interpretation mechanisms
- objects rights messaging protocol
- syntax rights expression languages

Erickson concluded:

- W3C should recommend a platform for IPR policy expression, discovery, and interpretation.
- 2. W3C should not recommend a standardized digital rights management system.
- 3. Core should be reliable way to express and transfer rights information.

Renato Iannella (IPR Systems), Open Digital Rights Management

See also the slides and the Position Paper

We need to define DRM formally. Customary DRM definitions tend to emphasize protection, enforcement, security. We need to remove the security/locking focus of DRM. There are a lot of definitions out there. But we want DRM to be broader: describe, identity, trade, monitor, track, and manage rights holder relationships. We want to leave behind the "creation waterfall" concept of create => trade => use as a line. We want to look at a circular life cycle approach (compare Rust events). We use the same terms: create-trade-use and add reuse = recreate. Then the life cycle is more accurately seen as circular. He gave an example of transparency in presenting rights, from Adobe eBook. You are authorized to get the copy. It is OK to copy (up to 10 times each week), to print, to lend. But you cannot give or read aloud. He suggested, that it should be possible to pay for usage, not possession.

The following are building blocks for a DRM architecture:

- A better metadata framework: He would like it to be in RDF
- Trust (digital signatures)
- There are lessons to learn from P3P, CC/PP
- identification (URIs)
- XML packaging and tools

use the <indecs> model: content, parties, rights. Each one is a kind of class. Parties
described would be: author, corporate, agent, publisher. The content would be classified
in work, expression, manifestation, item. Rights would be classified in usages, rewards,
constraints.

Renato lannella presented the <u>ODRL</u>. He sees it as a starting point for a DRM Language, that could be developed within W3C.

Concludes: W3C Role could be:

- W3C Digital Rights Language Working Group to develop semantaics of a digital rights language encoded in XML
- Trusted Metadata Working Group to develop architecture to support encoding and transmission of DRM and other metadata
- DRM Interest Group to discuss next steps and establish relationship with other communities

W3C can solve some part of the DRM problem, coordinate others, and empower the user community.

Norman Paskin (Int. DOI Foundation), Digital Object Identifier (DOI)

See also the slides (ppt) and the Position Paper

Paskin was presenting the activity of the DOI Foundation. We have spent three years developing an identifier system for digital objects. We have been influenced by <indecs> analysis and implementations, e.g., ONIX and by consideration of digital object infrastructure (e.g., CNRI work).

DRM must be maximally extensible. DRM is digital management of rights, not just management of digital rights Practical rights management will require dealing with both digital and non-digital rights. Unique identification is essential for automation to work on this.

Description info and rights info are not distinguishable. Any piece of description may be needed in a rights transaction.

Creative items used to be physical, today we have both a physical and digital manifestation, so sometimes there are two identifiers, e.g., ISBN for one, URL for the other. But if we are going to automate transactions we must dis-ambiguate meanings. We need to define word like book in the spaces it may found in, the ISBN space or the <indecs> space.

There will not be one model for applying identifiers, it will differ for content communities, given practical implications, e.g. ONIX, MPEG-7, etc. A work may be an original manuscript version, the work in the abstract, a draft, a copy in a publication, a digital copy not in a publication, a reprint, etc.. In each role, there will be different ids and attributes. We don't have to have complete knowledge representation. We can build on agreements over what an identifier means within a given namespace

About names and locations, he said that a name is a location in a defined namespace, thus all names are locations is trivially true.

As practical needs for DOI, Paskin identified:

- multiple instances
- · persistence in face of change
- · mgt of non-digital entities
- · de-referencing, resolution

Who should be responsible for naming: Standards bodies, rights collectives? Examples are:

- EAN/UPC bar code system
- ISBN system
- URI system But what in the digital realm?
- URLs are a poor system for publishers

Identifier needs to be actionable. They can be the basis for rights management. But there won't be one place to go for:

- e.g., directory of parties (names of people, sort of, as for music, is developing a directory)
- · e.g., ontology of scientific article

We need to involve stakeholders, what is the W3C good for here?

Paskin used an aphorism: I think what is called media convergence really is "people convergence" (with the correlative problem of communication). Formalisms are essential in their place but must be explained. What we ought to care about does not just encompass the web.

DOI system offers:

- · numbering use any identifier
- description can use <indecs> framework

- action handles allow to link to instances
- It is persistent, granular, flexible, can wrap other identifiers

Discussion

Not for all questions and answers, the author was identified. In this case, you'll see only question and answer

Question: is URI primarily address where you find something?

Dan Connolly (W3C): I don't think so.

Danny Weitzner (W3C): Question to Godfrey Rust and John Erickson: Is there a consensus point? John said there should be a rights management schema. How modular is the <indecs> system? Does anyone who uses something that falls under the <indecs> model have to use the whole model?

Godfrey Rust (<indecs>): It is a matter of how you structure your information. If we use the event model to organize our system, this should lead to interoperability. If one wants to express things in most efficient way, an events - systems will be very powerful. Other systems/legacy info can be transformed into events model One doesn't have to organize all data into high level of functionality. We can still use information that is fairly low grade.

John Erickson (HP): An event model is powerful, because it allows description of certain rights relationships that we might think of in terms of electronic contracts. If we speak about rights languages, we can imagine a lot of different types of transactions. There are things that need to be declared, between an author and a publisher. It is a dynamic activity with lots of outcomes that the event model can characterize. The event model is the basis of an ontology. We need different vocabularies for different purposes. A contract between an author and a publisher is like dynamic state machine. The event model is a powerful way to express that. Things like rights vouchers/licenses and output of individual states are dependant on dynamic events.

Maximilian Herberger (Uni Saarland): Events are only one side. The event model reflects the state of subjective rights within a specific contract. We also need a way to describe how things fit together or what things have in common. We need a language at a higher level about objective rights. This language should be able to express classes of contract relationships. I think the combination of the two is the solution here.

Jonathan Schull (Digital Goods): Suppose I'm a publisher and I want to publish a book electronically. There are a whole lot of ways to do this. Each combination will have a

to do.

different address, thus creating a different digital object. A publisher doesn't really care

about the locations, he only cares about initial work. He may decide that people shouldn't print it, or that people want their money back. As a publisher, I want to have only one thing

Jonathan D. Hahn (Versaware): In a contrarian mode I say, well, about these "events," you know publishers may think of only one event, the one that came into play when I signed on to publish this work.

Godfrey Rust (<indecs>): A DOI is a single number for the object

Dan Connolly (W3C): What's the first letter of most DOIs? Names are little pieces of communication. Making up a name without thinking about communication is sort of silly. We don't decide anything by ourselves, we decide together with people we communicate with. I don't think you can invent new technology that solves all the social problems involved

Norman Paskin (DOI): The web is not the universal information space. There are things, which aren't on the web. We need to identify them too.

Eric Miller (OCLC): you can place something on the web without using DOI. I represent libraries, so if you publish, you want consumer to get access to stuff - you have to talk to your customer base to find out whether they will use access mechanism you are designing to access content. What are the things we are trying to automate here? Let's think about a scenario with implemented DRM, let's do what-if scenarios.

Question: Why are ontologies so important?

Answer: Take a look at ontologies and what publishers require and you have your problem defined

Eric Miller (OCLC): A question not yet resolved is, what happens in DRM if different kinds of people are accessing the same object, e.g. in the context of a library.

Robert Bollick, (McGraw-Hill): This is already covered. It is like every consumer/publisher interaction which is covered by the requirements. More information can be found on <u>publishers.org</u>. The name of the document is publishers DRM requirements.

Comment: We will get a lot of input/requirements from many different constituencies, e.g. record industry, book industry etc.. We need to consider the evolution of technology - technical components should be able to move indepently from one another. We have a conceptual model: Take a language and a context used by different areas and avoid using

two different terms for same requirement. We need to build a common platform. That gives you a mechanism to do extensions that are truly unique. Medicine, oil-drilling all use different terminology, but a conceptual model helps us to decide whether their need is unique and helps us develop an orthogonal system, and avoid redundancy

Scott Foshee, (Adobe) states agreement with the interest in fine-grained identification implied by the <indecs>/DOI ideas.

Question: We won't be able to define precisely what work is. We should avoid defining it. While broad categories of interactions may have been studied, do you think your publishing model is extensible to images, text, font? To Godfrey Rust: Do you think we can extend this to publishing of aggregations, e.g. written book by an author combined with paper it is printed on?

Godfrey Rust (<indecs>): Take a look at indecs papers. The answer is yes, I think this is possible.

Answer: The same is true for ONIX - thinking about selling pieces of a work

Danny Weitzner (W3C): Commenting on Norman's point of the Web not being the univerals information space, I think that in the discussions so far we showed lots of attention on commercial needs. The question is whether we would like common framework for discovering rights of document whether or not produced principally for trade or not? E.g., does a picture of my 3-year old fit into this framework? We risk to produce big costs if there are two classes of documents: One that fits into trading and others who don't. If we look at music, we see, that non-traditional documents are traded. I'm a bit concerned about the application of these systems only to "trade" items in the web, ignoring or disenfranchising the little objects which also have rights associated with them.

Godfrey Rust (<indecs>): The model we worked on are neutral as far as commerce is concerned. It can be used for picture of 3 year old. We haven't actually developed framework though. A critical piece of work is to decide what those verbs (note: for the actions) are. The model still needs a lot of detailed work. We have roughly agreed on the direction we take. Please don't overestimate what we've done.

Norman Paskin (DOI): <indecs>/DOI is about transactions. We mean by transaction anything, whether it's free or not. We focused on e-commerce. Our economic model is based on the barcode model. For some transactions, the financial cost will be zero.

John Erickson (HP): What is the methodology for rationalising to interpret new dimensions for a given problem space? There has been a lot of talk about notion of ontologies. We

have a certain way of thinking about a problem, and perhaps another way. Now we try to find ontologies to identify common points. Where does the notion of rationalizing problem spaces conflict with ontologies? I can see that it resonates in a closed room ...

Rob Koenen, MPEG: MPEG-7 is standard for describing content. Based on XML schema, there are principle notions like actor, people etc. Those are listed in a concepts list. There are basic concepts like shape, color etc. People can build their own ontology. MPEG has just decided to do a data dictionary for a rights language. MPEG has issued a call for requirements on 19 January 2001. Koenen invited W3C to work with MPEG on working on this problem

Peter Schirling (IBM & MPEG): We should try to avoid unnecessary duplication. We allow each discipline to build an ontology from a common frame, to reduce duplication of elements. Under that framework, different sectors can add their own things to a specific concepts list. Currently, we have only concept lists very specific to audio-visual content.

Scott Foshee (Adobe): There are two classes of objects (things): Under control and not under control. I wanted to state my agreement with Danny Weitzner, that there should only be one class. Clipart in a presentation software is an aggregation with content you created. By using a product that was licensed, everything on a harddisk is aggregated content work. DRM should be able to handle that. Take a picture of Danny Weitzner and apply a filter may result in aggregate work. The process that is applied results in another object. We need to get something that is workable, because this technology will be everywhere

Coffee Break, but not enough coffee for some

This collection of information is required by 37 CFR 1.97 and 1.98. The information is required to obtain or retain a benefit by the public which is to file (and by the USPTO to process) an application. Confidentiality is governed by 35 U.S.C. 122 and 37 CFR 1.14. This collection is estimated to take 1 hour to complete, including gathering, preparing and submitting the completed application form to the USPTO. Time will vary depending upon the individual case. Any comments on the amount of time you require to complete this form and/or suggestions for reducing this burden, should be sent to the Chief Information Officer, U.S. Patent and Trademark Office, U.S. Department of Commerce, P.O. Box 1450, Alexandria, VA 22313-1450. DO NOT SEND FEES OR COMPLETED FORMS TO THIS ADDRESS. **SEND TO: Commissioner for Patents, P.O. Box 1450, Alexandria, VA 22313-1450.**

Privacy Act Statement

The Privacy Act of 1974 (P.L. 93-579) requires that you be given certain information in connection with your submission of the attached form related to a patent application or patent. Accordingly, pursuant to the requirements of the Act, please be advised that: (1) the general authority for the collection of this information is 35 U.S.C. 2(b)(2); (2) furnishing of the information solicited is voluntary; and (3) the principal purpose for which the information is used by the U.S. Patent and Trademark Office is to process and/or examine your submission related to a patent application or patent. If you do not furnish the requested information, the U.S. Patent and Trademark Office may not be able to process and/or examine your submission, which may result in termination of proceedings or abandonment of the application or expiration of the patent.

The information provided by you in this form will be subject to the following routine uses:

- 1. The information on this form will be treated confidentially to the extent allowed under the Freedom of Information Act (5 U.S.C. 552) and the Privacy Act (5 U.S.C. 552a). Records from this system of records may be disclosed to the Department of Justice to determine whether the Freedom of Information Act requires disclosure of these record s.
- A record from this system of records may be disclosed, as a routine use, in the course of presenting evidence to a
 court, magistrate, or administrative tribunal, including disclosures to opposing counsel in the course of settlement
 negotiations.
- 3. A record in this system of records may be disclosed, as a routine use, to a Member of Congress submitting a request involving an individual, to whom the record pertains, when the individual has requested assistance from the Member with respect to the subject matter of the record.
- 4. A record in this system of records may be disclosed, as a routine use, to a contractor of the Agency having need for the information in order to perform a contract. Recipients of information shall be required to comply with the requirements of the Privacy Act of 1974, as amended, pursuant to 5 U.S.C. 552a(m).
- 5. A record related to an International Application filed under the Patent Cooperation Treaty in this system of records may be disclosed, as a routine use, to the International Bureau of the World Intellectual Property Organization, pursuant to the Patent Cooperation Treaty.
- 6. A record in this system of records may be disclosed, as a routine use, to another federal agency for purposes of National Security review (35 U.S.C. 181) and for review pursuant to the Atomic Energy Act (42 U.S.C. 218(c)).
- 7. A record from this system of records may be disclosed, as a routine use, to the Administrator, General Services, or his/her designee, during an inspection of records conducted by GSA as part of that agency's responsibility to recommend improvements in records management practices and programs, under authority of 44 U.S.C. 2904 and 2906. Such disclosure shall be made in accordance with the GSA regulations governing inspection of records for this purpose, and any other relevant (i.e., GSA or Commerce) directive. Such disclosure shall not be used to make determinations about individuals.
- 8. A record from this system of records may be disclosed, as a routine use, to the public after either publication of the application pursuant to 35 U.S.C. 122(b) or issuance of a patent pursuant to 35 U.S.C. 151. Further, a record may be disclosed, subject to the limitations of 37 CFR 1.14, as a routine use, to the public if the record was filed in an application which became abandoned or in which the proceedings were terminated and which application is referenced by either a published application, an application open to public inspections or an issued patent.
 - 9. A record from this system of records may be disclosed, as a routine use, to a Federal, State, or local law enforcement agency, if the USPTO becomes aware of a violation or potential violation of law or regulation.

Under the Paperwork Reduction Act of 1995, no persons are required to respond to a collection of information unless it contains a valid OMB control number.

Privacy Act Statement

The Privacy Act of 1974 (P.L. 93-579) requires that you be given certain information in connection with your submission of the attached form related to a patent application or patent. Accordingly, pursuant to the requirements of the Act, please be advised that: (1) the general authority for the collection of this information is 35 U.S.C. 2(b)(2); (2) furnishing of the information solicited is voluntary; and (3) the principal purpose for which the information is used by the U.S. Patent and Trademark Office is to process and/or examine your submission related to a patent application or patent. If you do not furnish the requested information, the U.S. Patent and Trademark Office may not be able to process and/or examine your submission, which may result in termination of proceedings or abandonment of the application or expiration of the patent.

The information provided by you in this form will be subject to the following routine uses:

- 1. The information on this form will be treated confidentially to the extent allowed under the Freedom of Information Act (5 U.S.C. 552) and the Privacy Act (5 U.S.C. 552a). Records from this system of records may be disclosed to the Department of Justice to determine whether the Freedom of Information Act requires disclosure of these record s.
- A record from this system of records may be disclosed, as a routine use, in the course of presenting evidence to a
 court, magistrate, or administrative tribunal, including disclosures to opposing counsel in the course of settlement
 negotiations.
- 3. A record in this system of records may be disclosed, as a routine use, to a Member of Congress submitting a request involving an individual, to whom the record pertains, when the individual has requested assistance from the Member with respect to the subject matter of the record.
- 4. A record in this system of records may be disclosed, as a routine use, to a contractor of the Agency having need for the information in order to perform a contract. Recipients of information shall be required to comply with the requirements of the Privacy Act of 1974, as amended, pursuant to 5 U.S.C. 552a(m).
- 5. A record related to an International Application filed under the Patent Cooperation Treaty in this system of records may be disclosed, as a routine use, to the International Bureau of the World Intellectual Property Organization, pursuant to the Patent Cooperation Treaty.
- 6. A record in this system of records may be disclosed, as a routine use, to another federal agency for purposes of National Security review (35 U.S.C. 181) and for review pursuant to the Atomic Energy Act (42 U.S.C. 218(c)).
- 7. A record from this system of records may be disclosed, as a routine use, to the Administrator, General Services, or his/her designee, during an inspection of records conducted by GSA as part of that agency's responsibility to recommend improvements in records management practices and programs, under authority of 44 U.S.C. 2904 and 2906. Such disclosure shall be made in accordance with the GSA regulations governing inspection of records for this purpose, and any other relevant (i.e., GSA or Commerce) directive. Such disclosure shall not be used to make determinations about individuals.
- 8. A record from this system of records may be disclosed, as a routine use, to the public after either publication of the application pursuant to 35 U.S.C. 122(b) or issuance of a patent pursuant to 35 U.S.C. 151. Further, a record may be disclosed, subject to the limitations of 37 CFR 1.14, as a routine use, to the public if the record was filed in an application which became abandoned or in which the proceedings were terminated and which application is referenced by either a published application, an application open to public inspections or an issued patent.
 - 9. A record from this system of records may be disclosed, as a routine use, to a Federal, State, or local law enforcement agency, if the USPTO becomes aware of a violation or potential violation of law or regulation.

DETAILED ACTION

Status of Claims

- 1. This action is in reply to the Arguments/Remarks filed 7-14-08.
- 2. Claims 1-36 are currently pending and have been examined.

Information Disclosure Statement

3. The Information Disclosure Statements filed on 7-2-08, 10-10-08 have been considered. Initialed copies of Form 1449 are enclosed herewith.

Response to Arguments

5. Applicant's arguments filed 7-14-08 have been fully considered but they are not persuasive. Applicant's arguments will be addressed in sequential order as they were set forth in the "Remarks" section on the above date. Applicant argues that Anand does not disclose meta-rights specifying derivable rights. Anand discloses, "Multiple principals can delegate a subset of their maximal permissions for the executable content. The mechanism uses policy for combining the delegated permissions into the content's current permissions" (col. 3, lines 27-31). Anand further discloses, "electing granted permissions from within an associated maximal set of permissions" (col. 3, lines 59-60). "As FIG. 2 depicts, the derivation mechanism (100) consists of the following five steps:", (col. 5, lines 1-2). "The current permissions (150), by definition, must always be a subset of the maximal permissions (140)", (col. 5, lines 14-16). "The description of executable content (120) is a set of attribute-value pairs. One possible

Art Unit: 3685

embodiment is RDF ("Resource Description Framework") labels that describe the metadata of a website's URI ("Universal Resource Identifier")", (col. 5, lines 17-21). The attribute-value pairs of Anand correspond to the meta-rights of Wang. Anand further discloses, "FIG. 4 illustrates that the nodes of a policy graph's directed graph consist of an attribute, a value, an entry, and an access control list. FIG. 5 illustrates a preferred embodiment of the permissions structure, and shows that permissions include positive and negative rights and transforms. FIG. 7 illustrates how the first step of the dynamic derivation mechanism creates a derivation instance and sets its attributes values" (col. 4, lines 18-31. The state variables of Wang correspond to the derivation instance of Anand, fig. 7. Anand regulates who is entitled to derive rights through an access control described in fig. 4 referenced above. Anand controls who is entitled to derive rights, "The access control list (325) limits access to the policy graph (320). Principals can be permitted to modify any of the policy graph attributes (321-325)", (col. 6, lines 26-29). Infrastructure further discloses a state machine which consists of state variables, as defined by Curtis. "Within the state machine, while a state variable does not equal exit 1301, the state machine will go from state to state based upon what the state variable is set to", (Curtis, 6,397,355, col. 9, lines 53-55).

Double Patenting

4. The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent

Art Unit: 3685

and to prevent possible harassment by multiple assignees. A nonstatutory obviousness-type double patenting rejection is appropriate where the conflicting claims are not identical, but at least one examined application claim is not patentably distinct from the reference claim(s) because the examined application claim is either anticipated by, or would have been obvious over, the reference claim(s). See, e.g., *In re Berg*, 140 F.3d 1428, 46 USPQ2d 1226 (Fed. Cir. 1998); *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) or 1.321(d) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent either is shown to be commonly owned with this application, or claims an invention made as a result of activities undertaken within the scope of a joint research agreement.

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

Claims 1-36 are provisionally rejected on the ground of nonstatutory double patenting over claim 6 of copending Application No. 10162701. This is a provisional double patenting rejection since the conflicting claims have not yet been patented.

Art Unit: 3685

The subject matter claimed in the instant application is fully disclosed in the referenced copending application and would be covered by any patent granted on that copending application since the referenced copending application and the instant application are claiming common subject matter, as follows: meta-rights, derived rights, rights transfer, generating a license.

Furthermore, there is no apparent reason why applicant would be prevented from presenting claims corresponding to those of the instant application in the other copending application. See *In re Schneller*, 397 F.2d 350, 158 USPQ 210 (CCPA 1968). See also MPEP § 804.

Claim Rejections - 35 USC §101

5. 35 U.S.C. §101 reads as follows:

Whoever invents or discovers any new and useful process, machine, manufacture, or composition of matter, or any new and useful improvement thereof, may obtain a patent therefor, subject to the conditions and requirements of this title.

6. Claims 1-36 are rejected under 35 U.S.C. §101 because the claimed invention is directed to non-statutory subject matter.

Based on Supreme Court precedent and recent Federal Circuit decisions, § 101 process must (1) be tied to another statutory class (such as a particular apparatus) or (2) transform underlying subject matter (such as an article or materials) to a different state or thing. If neither of these requirements is met by the claim(s), the method is not a patent eligible process under 35 U.S.C. § 101.

Application/Control Number: 10/956,121

Art Unit: 3685

In this particular case, claims 1, 12, 24 and their dependent claims 2-11, 13-23, 25-36 lack sufficient technology. (Diamond v. Diehr, 450 U.S. 175, 184 (1981); Parker v. Flook, 437 U.S. 584, 588 n.9 (1978); Gottschalk v. Benson, 409 U.S. 63, 70 (1972); Cochrane v. Deener, 94 U.S. 780, 787-88 (1876)). Claims 2-11, 13-23, 25-36 are also rejected as each depends from either claim 1, 12, 24.

Claim Rejections - 35 USC § 103

- 7. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
 - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 8. Claims 1-36 are rejected under U.S.C. 103(a) as being unpatentable over Anand, US Patent No. 6,044,466 (Anand), in view of Workshop on Digital Rights Management, Minutes from Architecture/Infrastructure Session (Infrastructure).

Claims 1, 12, 24:

Anand, as shown, discloses the following limitations:

obtaining a set of rights associated with an item, the set of rights including meta-rights specifying derivable rights that can be derived

Page 6

Art Unit: 3685

from the meta-rights (see column 3, line 15-31, column 5, lines 17-23, column 5, lines 1-16)

determining whether the rights consumer (user) is entitled to the derivable rights specified by the meta-rights (see col. 3, lines 27-31, column 5, line 14-21, col. 3, lines 32-35)

deriving at least one right from the derivable rights, if the rights consumer is entitled to the derivable rights specified by the meta-rights, wherein the derived right includes at least one state variable based on the set of rights and used for determining a state of the derived right (see column 5, line 1-16, col. 3, lines 32-35, col. 5, lines 17-21)

Anand discloses the limitations as shown above. Anand does not directly disclose a state variable (state machine), but Infrastructure does (page 8, paragraph 3)

It would have been obvious to one of ordinary skill in the art at the time of the invention to modify Anand to include the state machine of Infrastructure since this provides a dynamic structure that can express dynamic rights relationships.

Claims 2, 13, 25:

Anand, as shown, discloses the following limitations:

the state variable inherits a state thereof for content usage or rights transfer from the set of rights (see column 5, line 1-16)

Application/Control Number: 10/956,121

Art Unit: 3685

Page 8

Claims 3, 4, 14, 15, 26, 27:

Anand/Infrastructure discloses the limitations shown above. Anand further discloses:

the state variable shares a state thereof for content usage or rights transfer with the

set of rights (see column 8, line 7-14)

the state variable inherits a remaining state for content usage or rights transfer from

the set of rights (see column 5, line 14-16)

Claims 5, 16, 28:

Anand, as shown, discloses the following limitations:

the state variable is updated upon exercise of a right associated with the state

variable (see column 7, line 5-14)

Claims 6, 17, 29:

Anand, as shown, discloses the following limitations:

deriving a plurality of rights from the derivable rights, wherein the state variable is

shared by the derived rights (see column 7, line 1-7)

Claims 7, 8, 18, 19, 30, 31:

Art Unit: 3685

Anand discloses the limitations as shown above. Anand does not directly

disclose a state variable (state machine), but Infrastructure does:

the state variable represents a collection of states (see page 8, paragraph 3)

a plurality of state variables that determine the state of the derived right (see page 8,

paragraph 3)

It would have been obvious to one of ordinary skill in the art at the time of

the invention to modify Anand to include the state machine of Infrastructure since

this provides a dynamic structure that can express dynamic rights relationships.

Claims 9, 20, 32:

Anand, as shown, discloses the following limitations:

at least one state variable is unspecified in the derived right, is created during a

rights transfer, and is assigned to the derived right (see column 7, line 1-14)

Claims 10, 21, 33:

Anand, as shown, discloses the following limitations:

the state variable is transferred from the derivable rights to the derived right (see

column 7, line 15-23)

Claims 11, 22, 34, 36:

Art Unit: 3685

Anand, as shown, discloses the following limitations:

generating a license including the derived right, if the rights consumer is entitled to the derivable rights specified by the meta-rights (see column 7, line 24-29) one or more of the means for obtaining, the means for determining, and the means for deriving are specified in a license (see column 7, line 24-29)

Claim 35:

Anand, as shown, discloses the following limitations:

obtaining, the means for determining, and the means for deriving comprise at least one of computer-executable instructions, and devices of a computer system (see column 4, line 51-67)

Conclusion

THIS ACTION IS MADE FINAL. Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of

Art Unit: 3685

the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Thomas West whose telephone number is 571-270-1236. The examiner can normally be reached on M-R 7:30am - 5pm EST, ALT Fridays off.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Calvin L. Hewitt, can be reached on (571) 272-6709. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free). If you would like assistance from a USPTO Customer Service Representative or access to the automated information system, call 800-786-9199 (IN USA OR CANADA) or 571-272-1000.

[Minutes Overview] [Workshop Home] [Previous:Publishers Requirements] [Next:Architecture: Interoperability and Standards]

Minutes from the Architecture/Infrastructure Session

Please refer to the position-papers and slides for authoritative answers. The following minutes are only a snapshot of Presentations and Discussions

- INDECS Framework Data Definitions Godfrey Rust (Indecs Project)
- URI's and Object Identifiers Dan Connolly (W3C)
- Principles for Standardization and Interoperability in Web-based Digital Rights Management John Erickson (Hewlett-Packard)
- Open Digital Rights Management Renato lannella (IPR Systems)
- Digital Object Identifier Norman Paskin (Int. DOI Foundation)
- Discussion

Godfrey Rust (<indecs> Project), INDECS Framework Data Definitions

See also the [Slides (ppt)] and the <indecs> Framework

The <indecs> project ended 2000, now we are new company called <indecs> framework. Look at our online document: Principles, model, and data dictionary, June 2000.

We see DRM in terms of metadata, as a metadata problem. The description is covered in Open eBook, ONIX, and my company.

Here is the scheme:

- 1. people make stuff
- 2. people use stuff

3. people do deals about stuff

The scope is stuff. This can be characterized in terms of:

- 1. Parties
- 2. Creations
- 3. Agreements

Rust projected a diagram showing the high granularity in the <indecs> model, with hierarchy of parties and agreements. He noted that you must pass along the metadata in a structured defined way to permit computational processes.

The following things are required:

- functional granularity: you must be able to identify stuff at any level of granularity
- unique id
- who says so designated authority
- appropriate access (who can do what)

In the 1980s, there were few schemes for description, today there are many, lists ten major ones, including MPEG-7, ONIX, SMPTE, RIAA/IFPI, and several more.

Here are the <indecs> principles:

- All metadata is just a view (example: about the work versus about the manifestation, and more, each of which may have its own rights)
 - views must not be confused; mistaken identity can be disastrous to rights management
 - o views need to be interoperable
- Almost all terms need identifiers
 - o values must be defined and identified
 - o need standard vocabularies and ontologies.
 - automation need for disambiguity. There is an existing vocabulary for some things: territories, language, currency, date/time and some others. But we need dozens of others.
- · Events are key to interoperability
 - o most metadata is stuff or people based
 - o events description are key to rights management

Godfrey Rust gave an example how this would work:

- 1. make event the first class object, e.g., Rust creating these slides
- 2. then all the other elements are attributes: author, date, title, etc.
- next event, e.g., Rust showing this Slide -- it has attributes too and references the previous event, thus connecting the creative items
- next event: Norman Paskin adapts (transforming event) these slides before he shows it at another meeting, thus creating new attributes and references to preceding events, thus connecting the creative items

This model has the same information as other metadata structures, just organized differently to serve rights management.

Here's another event that bears on rights: agreeing. What goes into the agreement is what goes into descriptive metadata, what he had, what he did. Also assertion by a trusted entity that verifies or authenticates.

Using the event structure, now have six events regarding these slide-show. See how you can use events to **integrate** descriptive and rights metadata.

But we need rights vocabularies to make this work, on a parallel with the need for vocabularies to serve descriptive metadata.

Dan Connolly [W3C], W3C URI Design Principles

See also the corresponding Activity within W3C and the slides

He outlined W3C's Philosophy of Standards: Help people do the right thing.

URIs will have a relationship to a potential DRM-Activity. Connolly also suggests that DRM discussion focus on payments and rights negotiation as much as prevention of access.

All names are ultimately local. Global naming depends on social agreements and trust. HTTP is not the only protocol. For the Web, we use DNS (Domain Name System). Don't forget, HTML is not the only file type. Things can evolve, you can use proxies and thus use an old name against new protocol. But URIs are the only thing in that arena. New protocols can be used with existing names. There is no need to change names just because you change protocols. We don't need to make new URI schemes just because we have made a new data format.

There is opacity: Don't peek inside names, names (URIs) are not user interface. Don't reinvent redirection in http, it is not a service, they are not locators. DNS supports multiple A records. Lots of administrative hierarchies fit in current http and DNS, you don't need to

invent a new URI scheme.

URIs were not designed as a user interface. Don't use a URN as a brand name. To establish a new trusted brand name, trying to wedge them into DNS is a problem, you're ought to use <title>

John Erickson (HP), Principles for Standardization and Interoperability in Web-based Digital Rights Management

See also the slides and the Position Paper

John Erickson started by re-inforcing what was already heard during previous sessions: When we think about DRM, we have to separate expression of rights information and policies from the enforcement of those rights. We have to think of a layered model, separate the expression of rights information from the info for discovery and from implementing and enforcing those rights.

What is the W3C's role here? We think W3C should recommend a platform. Erickson put emphasis on the development of a language and a protocol for IPR policy expression, discovery, and interpretation.

The W3C should not recommend a standard DRM system. But we should provide a basis for the interoperability of such systems. Core should be to find a reliable way to express and transfer rights information. Remember the design principles of the web, IPR work ought not violate them.

Erickson developed the following set of requirements:

- never interfere with users' ability to discover info (incl rights info) on the web, this is what I
 mean by universal access, so I can decide about whether to access
- always communicate the policies and technical restraints in understandable language
- policies are communicated in fair and open ways
- need for trust, need to have a basis to trust the assertions being made, need a mechanism to assure trustworthiness
- IPR information and policies must be discoverable and minimally interpretable in dependent of any given vendor's solution
- the languages and protocols must be designed for evolution
- web based mechanism must allow for owners to choose different tools and consumers to use different tools to discover and interpret rights info
- cool new content that comes along ought not break the DRM systems or break the languages and protocols

Minutes from the Architecture Session of DRM Workshop

Here's our [HP publishing group] proposal: PREP (Policy and Rights Expression Platform, see the <u>Position Paper</u> for more information). It would be a framework to express and interpret the policies and info. It should complement laws and self-regulatory programs. It should be consistent with prior work, e.g., P3P.

What are the building blocks of PREP?

- semantics policy interpretation mechanisms
- objects rights messaging protocol
- syntax rights expression languages

Erickson concluded:

- W3C should recommend a platform for IPR policy expression, discovery, and interpretation.
- 2. W3C should not recommend a standardized digital rights management system.
- 3. Core should be reliable way to express and transfer rights information.

Renato Iannella (IPR Systems), Open Digital Rights Management

See also the slides and the Position Paper

We need to define DRM formally. Customary DRM definitions tend to emphasize protection, enforcement, security. We need to remove the security/locking focus of DRM. There are a lot of definitions out there. But we want DRM to be broader: describe, identity, trade, monitor, track, and manage rights holder relationships. We want to leave behind the "creation waterfall" concept of create => trade => use as a line. We want to look at a circular life cycle approach (compare Rust events). We use the same terms: create-trade-use and add reuse = recreate. Then the life cycle is more accurately seen as circular. He gave an example of transparency in presenting rights, from Adobe eBook. You are authorized to get the copy. It is OK to copy (up to 10 times each week), to print, to lend. But you cannot give or read aloud. He suggested, that it should be possible to pay for usage, not possession.

The following are building blocks for a DRM architecture:

- A better metadata framework: He would like it to be in RDF
- Trust (digital signatures)
- There are lessons to learn from P3P, CC/PP
- identification (URIs)
- XML packaging and tools

use the <indecs> model: content, parties, rights. Each one is a kind of class. Parties
described would be: author, corporate, agent, publisher. The content would be classified
in work, expression, manifestation, item. Rights would be classified in usages, rewards,
constraints.

Renato lannella presented the <u>ODRL</u>. He sees it as a starting point for a DRM Language, that could be developed within W3C.

Concludes: W3C Role could be:

- W3C Digital Rights Language Working Group to develop semantaics of a digital rights language encoded in XML
- Trusted Metadata Working Group to develop architecture to support encoding and transmission of DRM and other metadata
- DRM Interest Group to discuss next steps and establish relationship with other communities

W3C can solve some part of the DRM problem, coordinate others, and empower the user community.

Norman Paskin (Int. DOI Foundation), Digital Object Identifier (DOI)

See also the slides (ppt) and the Position Paper

Paskin was presenting the activity of the DOI Foundation. We have spent three years developing an identifier system for digital objects. We have been influenced by <indecs> analysis and implementations, e.g., ONIX and by consideration of digital object infrastructure (e.g., CNRI work).

DRM must be maximally extensible. DRM is digital management of rights, not just management of digital rights Practical rights management will require dealing with both digital and non-digital rights. Unique identification is essential for automation to work on this.

Description info and rights info are not distinguishable. Any piece of description may be needed in a rights transaction.

Creative items used to be physical, today we have both a physical and digital manifestation, so sometimes there are two identifiers, e.g., ISBN for one, URL for the other. But if we are going to automate transactions we must dis-ambiguate meanings. We need to define word like book in the spaces it may found in, the ISBN space or the <indecs> space.

There will not be one model for applying identifiers, it will differ for content communities, given practical implications, e.g. ONIX, MPEG-7, etc. A work may be an original manuscript version, the work in the abstract, a draft, a copy in a publication, a digital copy not in a publication, a reprint, etc.. In each role, there will be different ids and attributes. We don't have to have complete knowledge representation. We can build on agreements over what an identifier means within a given namespace

About names and locations, he said that a name is a location in a defined namespace, thus all names are locations is trivially true.

As practical needs for DOI, Paskin identified:

- multiple instances
- · persistence in face of change
- · mgt of non-digital entities
- · de-referencing, resolution

Who should be responsible for naming: Standards bodies, rights collectives? Examples are:

- EAN/UPC bar code system
- ISBN system
- URI system But what in the digital realm?
- URLs are a poor system for publishers

Identifier needs to be actionable. They can be the basis for rights management. But there won't be one place to go for:

- e.g., directory of parties (names of people, sort of, as for music, is developing a directory)
- · e.g., ontology of scientific article

We need to involve stakeholders, what is the W3C good for here?

Paskin used an aphorism: I think what is called media convergence really is "people convergence" (with the correlative problem of communication). Formalisms are essential in their place but must be explained. What we ought to care about does not just encompass the web.

DOI system offers:

- · numbering use any identifier
- description can use <indecs> framework

- action handles allow to link to instances
- It is persistent, granular, flexible, can wrap other identifiers

Discussion

Not for all questions and answers, the author was identified. In this case, you'll see only question and answer

Question: is URI primarily address where you find something?

Dan Connolly (W3C): I don't think so.

Danny Weitzner (W3C): Question to Godfrey Rust and John Erickson: Is there a consensus point? John said there should be a rights management schema. How modular is the <indecs> system? Does anyone who uses something that falls under the <indecs> model have to use the whole model?

Godfrey Rust (<indecs>): It is a matter of how you structure your information. If we use the event model to organize our system, this should lead to interoperability. If one wants to express things in most efficient way, an events - systems will be very powerful. Other systems/legacy info can be transformed into events model One doesn't have to organize all data into high level of functionality. We can still use information that is fairly low grade.

John Erickson (HP): An event model is powerful, because it allows description of certain rights relationships that we might think of in terms of electronic contracts. If we speak about rights languages, we can imagine a lot of different types of transactions. There are things that need to be declared, between an author and a publisher. It is a dynamic activity with lots of outcomes that the event model can characterize. The event model is the basis of an ontology. We need different vocabularies for different purposes. A contract between an author and a publisher is like dynamic state machine. The event model is a powerful way to express that. Things like rights vouchers/licenses and output of individual states are dependant on dynamic events.

Maximilian Herberger (Uni Saarland): Events are only one side. The event model reflects the state of subjective rights within a specific contract. We also need a way to describe how things fit together or what things have in common. We need a language at a higher level about objective rights. This language should be able to express classes of contract relationships. I think the combination of the two is the solution here.

Jonathan Schull (Digital Goods): Suppose I'm a publisher and I want to publish a book electronically. There are a whole lot of ways to do this. Each combination will have a

to do.

different address, thus creating a different digital object. A publisher doesn't really care

about the locations, he only cares about initial work. He may decide that people shouldn't print it, or that people want their money back. As a publisher, I want to have only one thing

Jonathan D. Hahn (Versaware): In a contrarian mode I say, well, about these "events," you know publishers may think of only one event, the one that came into play when I signed on to publish this work.

Godfrey Rust (<indecs>): A DOI is a single number for the object

Dan Connolly (W3C): What's the first letter of most DOIs? Names are little pieces of communication. Making up a name without thinking about communication is sort of silly. We don't decide anything by ourselves, we decide together with people we communicate with. I don't think you can invent new technology that solves all the social problems involved

Norman Paskin (DOI): The web is not the universal information space. There are things, which aren't on the web. We need to identify them too.

Eric Miller (OCLC): you can place something on the web without using DOI. I represent libraries, so if you publish, you want consumer to get access to stuff - you have to talk to your customer base to find out whether they will use access mechanism you are designing to access content. What are the things we are trying to automate here? Let's think about a scenario with implemented DRM, let's do what-if scenarios.

Question: Why are ontologies so important?

Answer: Take a look at ontologies and what publishers require and you have your problem defined

Eric Miller (OCLC): A question not yet resolved is, what happens in DRM if different kinds of people are accessing the same object, e.g. in the context of a library.

Robert Bollick, (McGraw-Hill): This is already covered. It is like every consumer/publisher interaction which is covered by the requirements. More information can be found on <u>publishers.org</u>. The name of the document is publishers DRM requirements.

Comment: We will get a lot of input/requirements from many different constituencies, e.g. record industry, book industry etc.. We need to consider the evolution of technology - technical components should be able to move indepently from one another. We have a conceptual model: Take a language and a context used by different areas and avoid using

two different terms for same requirement. We need to build a common platform. That gives you a mechanism to do extensions that are truly unique. Medicine, oil-drilling all use different terminology, but a conceptual model helps us to decide whether their need is unique and helps us develop an orthogonal system, and avoid redundancy

Scott Foshee, (Adobe) states agreement with the interest in fine-grained identification implied by the <indecs>/DOI ideas.

Question: We won't be able to define precisely what work is. We should avoid defining it. While broad categories of interactions may have been studied, do you think your publishing model is extensible to images, text, font? To Godfrey Rust: Do you think we can extend this to publishing of aggregations, e.g. written book by an author combined with paper it is printed on?

Godfrey Rust (<indecs>): Take a look at indecs papers. The answer is yes, I think this is possible.

Answer: The same is true for ONIX - thinking about selling pieces of a work

Danny Weitzner (W3C): Commenting on Norman's point of the Web not being the univerals information space, I think that in the discussions so far we showed lots of attention on commercial needs. The question is whether we would like common framework for discovering rights of document whether or not produced principally for trade or not? E.g., does a picture of my 3-year old fit into this framework? We risk to produce big costs if there are two classes of documents: One that fits into trading and others who don't. If we look at music, we see, that non-traditional documents are traded. I'm a bit concerned about the application of these systems only to "trade" items in the web, ignoring or disenfranchising the little objects which also have rights associated with them.

Godfrey Rust (<indecs>): The model we worked on are neutral as far as commerce is concerned. It can be used for picture of 3 year old. We haven't actually developed framework though. A critical piece of work is to decide what those verbs (note: for the actions) are. The model still needs a lot of detailed work. We have roughly agreed on the direction we take. Please don't overestimate what we've done.

Norman Paskin (DOI): <indecs>/DOI is about transactions. We mean by transaction anything, whether it's free or not. We focused on e-commerce. Our economic model is based on the barcode model. For some transactions, the financial cost will be zero.

John Erickson (HP): What is the methodology for rationalising to interpret new dimensions for a given problem space? There has been a lot of talk about notion of ontologies. We

have a certain way of thinking about a problem, and perhaps another way. Now we try to find ontologies to identify common points. Where does the notion of rationalizing problem spaces conflict with ontologies? I can see that it resonates in a closed room ...

Rob Koenen, MPEG: MPEG-7 is standard for describing content. Based on XML schema, there are principle notions like actor, people etc. Those are listed in a concepts list. There are basic concepts like shape, color etc. People can build their own ontology. MPEG has just decided to do a data dictionary for a rights language. MPEG has issued a call for requirements on 19 January 2001. Koenen invited W3C to work with MPEG on working on this problem

Peter Schirling (IBM & MPEG): We should try to avoid unnecessary duplication. We allow each discipline to build an ontology from a common frame, to reduce duplication of elements. Under that framework, different sectors can add their own things to a specific concepts list. Currently, we have only concept lists very specific to audio-visual content.

Scott Foshee (Adobe): There are two classes of objects (things): Under control and not under control. I wanted to state my agreement with Danny Weitzner, that there should only be one class. Clipart in a presentation software is an aggregation with content you created. By using a product that was licensed, everything on a harddisk is aggregated content work. DRM should be able to handle that. Take a picture of Danny Weitzner and apply a filter may result in aggregate work. The process that is applied results in another object. We need to get something that is workable, because this technology will be everywhere

Coffee Break, but not enough coffee for some

Privacy Act Statement

The Privacy Act of 1974 (P.L. 93-579) requires that you be given certain information in connection with your submission of the attached form related to a patent application or patent. Accordingly, pursuant to the requirements of the Act, please be advised that: (1) the general authority for the collection of this information is 35 U.S.C. 2(b)(2); (2) furnishing of the information solicited is voluntary; and (3) the principal purpose for which the information is used by the U.S. Patent and Trademark Office is to process and/or examine your submission related to a patent application or patent. If you do not furnish the requested information, the U.S. Patent and Trademark Office may not be able to process and/or examine your submission, which may result in termination of proceedings or abandonment of the application or expiration of the patent.

The information provided by you in this form will be subject to the following routine uses:

- 1. The information on this form will be treated confidentially to the extent allowed under the Freedom of Information Act (5 U.S.C. 552) and the Privacy Act (5 U.S.C. 552a). Records from this system of records may be disclosed to the Department of Justice to determine whether the Freedom of Information Act requires disclosure of these record s.
- A record from this system of records may be disclosed, as a routine use, in the course of presenting evidence to a
 court, magistrate, or administrative tribunal, including disclosures to opposing counsel in the course of settlement
 negotiations.
- 3. A record in this system of records may be disclosed, as a routine use, to a Member of Congress submitting a request involving an individual, to whom the record pertains, when the individual has requested assistance from the Member with respect to the subject matter of the record.
- 4. A record in this system of records may be disclosed, as a routine use, to a contractor of the Agency having need for the information in order to perform a contract. Recipients of information shall be required to comply with the requirements of the Privacy Act of 1974, as amended, pursuant to 5 U.S.C. 552a(m).
- 5. A record related to an International Application filed under the Patent Cooperation Treaty in this system of records may be disclosed, as a routine use, to the International Bureau of the World Intellectual Property Organization, pursuant to the Patent Cooperation Treaty.
- 6. A record in this system of records may be disclosed, as a routine use, to another federal agency for purposes of National Security review (35 U.S.C. 181) and for review pursuant to the Atomic Energy Act (42 U.S.C. 218(c)).
- 7. A record from this system of records may be disclosed, as a routine use, to the Administrator, General Services, or his/her designee, during an inspection of records conducted by GSA as part of that agency's responsibility to recommend improvements in records management practices and programs, under authority of 44 U.S.C. 2904 and 2906. Such disclosure shall be made in accordance with the GSA regulations governing inspection of records for this purpose, and any other relevant (i.e., GSA or Commerce) directive. Such disclosure shall not be used to make determinations about individuals.
- 8. A record from this system of records may be disclosed, as a routine use, to the public after either publication of the application pursuant to 35 U.S.C. 122(b) or issuance of a patent pursuant to 35 U.S.C. 151. Further, a record may be disclosed, subject to the limitations of 37 CFR 1.14, as a routine use, to the public if the record was filed in an application which became abandoned or in which the proceedings were terminated and which application is referenced by either a published application, an application open to public inspections or an issued patent.
 - 9. A record from this system of records may be disclosed, as a routine use, to a Federal, State, or local law enforcement agency, if the USPTO becomes aware of a violation or potential violation of law or regulation.

Under the Paperwork Reduction Act of 1995, no persons are required to respond to a collection of information unless it contains a valid OMB control number.

Please find below and/or attached an Office communication concerning this application or proceeding.

The time period for reply, if any, is set in the attached communication.

	Application No.	Applicant(s)							
Office Action Comments	10/956,121	WANG ET AL.							
Office Action Summary	Examiner	Art Unit							
	THOMAS WEST	3685							
The MAILING DATE of this communication app Period for Reply	ears on the cover sheet with the c	orrespondence ad	ldress						
A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION. - Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication. - If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication. - Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).									
Status									
1) Responsive to communication(s) filed on 14 Ju	lv 2008.								
	action is non-final.								
3) Since this application is in condition for allowan	ce except for formal matters, pro	secution as to the	e merits is						
closed in accordance with the practice under E.									
Disposition of Claims									
4)⊠ Claim(s) <u>1-36</u> is/are pending in the application.									
4a) Of the above claim(s) is/are withdraw	n from consideration.								
5) Claim(s) is/are allowed.									
6) Claim(s) <u>1-36</u> is/are rejected.									
7) Claim(s) is/are objected to.									
8) Claim(s) are subject to restriction and/or	election requirement.								
Application Papers									
9) The specification is objected to by the Examiner									
10) The drawing(s) filed on is/are: a) acce	•								
Applicant may not request that any objection to the o	drawing(s) be held in abeyance. See	37 CFR 1.85(a).							
Replacement drawing sheet(s) including the correction	on is required if the drawing(s) is obj	ected to. See 37 CI	FR 1.121(d).

Art Unit: 3685

DETAILED ACTION

Status of Claims

- 1. The Final Office Action dated 10-16-08 is withdrawn. This action is in reply to the Arguments/Remarks filed 7-14-08.
- 2. Claims 1-36 are currently pending and have been examined.

Information Disclosure Statement

3. The Information Disclosure Statements filed on 7-2-08, 10-10-08 have been considered. Initialed copies of Form 1449 are enclosed herewith.

Response to Arguments

5. Applicant's arguments filed 7-14-08 have been fully considered but they are not persuasive. Applicant's arguments will be addressed in sequential order as they were set forth in the "Remarks" section on the above date. Applicant argues that Anand does not disclose metarights specifying derivable rights. Anand discloses, "Multiple principals can delegate a subset of their maximal permissions for the executable content. The mechanism uses policy for combining the delegated permissions into the content's current permissions" (col. 3, lines 27-31). Anand further discloses, "electing granted permissions from within an associated maximal set of permissions" (col. 3, lines 59-60). "As FIG. 2 depicts, the derivation mechanism (100) consists of the following five steps:", (col. 5, lines 1-2). "The current permissions (150), by definition, must always be a subset of the maximal permissions (140)", (col. 5, lines 14-16). "The description of executable content (120) is a set of attribute-value pairs. One possible

Art Unit: 3685

embodiment is RDF ("Resource Description Framework") labels that describe the meta-data of a website's URI ("Universal Resource Identifier")", (col. 5, lines 17-21). The attribute-value pairs of Anand correspond to the meta-rights of Wang. Anand further discloses, "FIG. 4 illustrates that the nodes of a policy graph's directed graph consist of an attribute, a value, an entry, and an access control list. FIG. 5 illustrates a preferred embodiment of the permissions structure, and shows that permissions include positive and negative rights and transforms. FIG. 7 illustrates how the first step of the dynamic derivation mechanism creates a derivation instance and sets its attributes values" (col. 4, lines 18-31. The state variables of Wang correspond to the derivation instance of Anand, fig. 7. Anand regulates who is entitled to derive rights through an access control described in fig. 4 referenced above. Anand controls who is entitled to derive rights, "The access control list (325) limits access to the policy graph (320). Principals can be permitted to modify any of the policy graph attributes (321-325)", (col. 6, lines 26-29). Infrastructure further discloses a state machine which consists of state variables, as defined by Curtis. "Within the state machine, while a state variable does not equal exit 1301, the state machine will go from state to state based upon what the state variable is set to", (Curtis, 6,397,355, col. 9, lines 53-55).

Double Patenting

4. The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. A nonstatutory obviousness-type double patenting rejection is appropriate where the conflicting claims are not identical, but at least one examined

Art Unit: 3685

application claim is not patentably distinct from the reference claim(s) because the examined application claim is either anticipated by, or would have been obvious over, the reference claim(s). See, e.g., *In re Berg*, 140 F.3d 1428, 46 USPQ2d 1226 (Fed. Cir. 1998); *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) or 1.321(d) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent either is shown to be commonly owned with this application, or claims an invention made as a result of activities undertaken within the scope of a joint research agreement.

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

Claims 1-36 are provisionally rejected on the ground of nonstatutory double patenting over claim 6 of copending Application No. 10162701. This is a provisional double patenting rejection since the conflicting claims have not yet been patented.

The subject matter claimed in the instant application is fully disclosed in the referenced copending application and would be covered by any patent granted on that copending application since the referenced copending application and the instant application are claiming common subject matter, as follows: meta-rights, derived rights, rights transfer, generating a license.

Art Unit: 3685

Furthermore, there is no apparent reason why applicant would be prevented from presenting claims corresponding to those of the instant application in the other copending application. See *In re Schneller*, 397 F.2d 350, 158 USPQ 210 (CCPA 1968). See also MPEP § 804.

Claim Rejections - 35 USC §101

5. 35 U.S.C. §101 reads as follows:

Whoever invents or discovers any new and useful process, machine, manufacture, or composition of matter, or any new and useful improvement thereof, may obtain a patent therefor, subject to the conditions and requirements of this title.

6. Claims 1-36 are rejected under 35 U.S.C. §101 because the claimed invention is directed to non-statutory subject matter.

Based on Supreme Court precedent and recent Federal Circuit decisions, § 101 process must (1) be tied to another statutory class (such as a particular apparatus) or (2) transform underlying subject matter (such as an article or materials) to a different state or thing. If neither of these requirements is met by the claim(s), the method is not a patent eligible process under 35 U.S.C. § 101.

In this particular case, claims 1, 12, 24 and their dependent claims 2-11, 13-23, 25-36 lack sufficient technology. (Diamond v. Diehr, 450 U.S. 175, 184 (1981); Parker v. Flook, 437 U.S. 584, 588 n.9 (1978); Gottschalk v. Benson, 409 U.S. 63, 70 (1972); Cochrane v. Deener, 94 U.S. 780, 787-88 (1876)).

Claims 2-11, 13-23, 25-36 are also rejected as each depends from either claim 1, 12, 24.

Art Unit: 3685

Claim Rejections - 35 USC § 103

7. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all

obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are

such that the subject matter as a whole would have been obvious at the time the invention was made to a person

having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

8. Claims 1-36 are rejected under U.S.C. 103(a) as being unpatentable over Anand, US

Patent No. 6,044,466 (Anand), in view of Workshop on Digital Rights Management, Minutes

from Architecture/Infrastructure Session (Infrastructure).

Claims 1, 12, 24:

Anand, as shown, discloses the following limitations:

obtaining a set of rights associated with an item, the set of rights

including meta-rights specifying derivable rights that can be derived

from the meta-rights (see column 3, line 15-31, column 5, lines 17-23,

column 5, lines 1-16)

determining whether the rights consumer (user) is entitled to the derivable rights

specified by the meta-rights (see col. 3, lines 27-31, column 5, line 14-21, col. 3,

lines 32-35)

deriving at least one right from the derivable rights, if the rights consumer is entitled

to the derivable rights specified by the meta-rights, wherein the derived right

Art Unit: 3685

includes at least one state variable based on the set of rights and used for determining a state of the derived right (see column 5, line 1-16, col. 3, lines 32-35, col. 5, lines 17-21)

Anand discloses the limitations as shown above. Anand does not directly disclose a state variable (state machine), but Infrastructure does (page 8, paragraph 3)

It would have been obvious to one of ordinary skill in the art at the time of the invention to modify Anand to include the state machine of Infrastructure since this provides a dynamic structure that can express dynamic rights relationships.

Claims 2, 13, 25:

Anand, as shown, discloses the following limitations:

the state variable inherits a state thereof for content usage or rights transfer from the set of rights (see column 5, line 1-16)

Claims 3, 4, 14, 15, 26, 27:

Anand/Infrastructure discloses the limitations shown above. Anand further discloses:

the state variable shares a state thereof for content usage or rights transfer with the set of rights (see column 8, line 7-14)

the state variable inherits a remaining state for content usage or rights transfer from the set of rights (see column 5, line 14-16)

Art Unit: 3685

Claims 5, 16, 28:

Anand, as shown, discloses the following limitations:

the state variable is updated upon exercise of a right associated with the state

variable (see column 7, line 5-14)

Claims 6, 17, 29:

Anand, as shown, discloses the following limitations:

deriving a plurality of rights from the derivable rights, wherein the state variable is

shared by the derived rights (see column 7, line 1-7)

Claims 7, 8, 18, 19, 30, 31:

Anand discloses the limitations as shown above. Anand does not directly disclose

a state variable (state machine), but Infrastructure does:

the state variable represents a collection of states (see page 8, paragraph 3)

a plurality of state variables that determine the state of the derived right (see page 8,

paragraph 3)

It would have been obvious to one of ordinary skill in the art at the time of the

invention to modify Anand to include the state machine of Infrastructure since this

provides a dynamic structure that can express dynamic rights relationships.

Art Unit: 3685

Claims 9, 20, 32:

Anand, as shown, discloses the following limitations:

at least one state variable is unspecified in the derived right, is created during a rights transfer, and is assigned to the derived right (see column 7, line 1-14)

Claims 10, 21, 33:

Anand, as shown, discloses the following limitations:

the state variable is transferred from the derivable rights to the derived right (see column 7, line 15-23)

Claims 11, 22, 34, 36:

Anand, as shown, discloses the following limitations:

generating a license including the derived right, if the rights consumer is entitled to the derivable rights specified by the meta-rights (see column 7, line 24-29) one or more of the means for obtaining, the means for determining, and the means for deriving are specified in a license (see column 7, line 24-29)

Claim 35:

Anand, as shown, discloses the following limitations:

Page 9

Art Unit: 3685

obtaining, the means for determining, and the means for deriving comprise at least one of computer-executable instructions, and devices of a computer system (see column 4, line 51-67)

Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Thomas West whose telephone number is 571-270-1236. The examiner can normally be reached on M-R 7:30am - 5pm EST, ALT Fridays off.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Calvin L. Hewitt, can be reached on (571) 272-6709. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free). If you would like assistance from a USPTO Customer Service Representative or access to the automated information system, call 800-786-9199 (IN USA OR CANADA) or 571-272-1000.

U.S. Patent and Trademark Office Part of Paper No.: 20081012

REMARKS

Claims 1-36 were pending in the present application prior to the above amendment. In response to the Office Action, claims 1, 12, and 24 are amended to clarify the invention, and not for reasons of patentability. No claims have been canceled, and no claims have been added. Therefore, claims 1-36 remain pending in the present application and are believed to be in proper condition for allowance. Applicants request reconsideration and allowance of the application in view of the above amendments and the following remarks.

Claims 1-36 stand provisionally rejected on the ground of nonstatutory double-patenting over claim 6 of copending Application No. 10162701. Applicants respectfully request that this provisional rejection be held in abeyance until this application is otherwise in condition for allowance, at which point Applicants will consider filing a Terminal Disclaimer.

Claims 1-36 stand rejected under 35 U.S.C. § 101 as being related to a process that is not (1) tied to a statutory class, or (2) transforming an underlying subject matter (such as an article or material) to a different state or thing. However, Applicants believe claims 1, 12, and 24 as presented herein fully satisfy the requirements of 35 U.S.C. § 101.

Specifically, claims 1, 12, and 24 each recite that "the meta-rights are provided in digital form and are enforceable by a repository." Claim 1 further recites a "computer-implemented method" in which the determining step is carried out "by a repository." Applicants believe these amendments to the claims obviate the Examiner's rejection under 35 U.S.C. § 101, and respectfully request reconsideration and withdrawal of this rejection.

Claims 1-36 stand rejected under 35 U.S.C. §103(a) as allegedly being unpatentable over Anand et al. (U.S. Patent No. 6,044,466) in view of "Workshop on Digital Rights Management, Minutes from Architecture/Infrastructure Session" (hereafter, Infrastructure). However, Applicants respectfully submit that neither Anand nor Infrastructure, taken alone or in combination, disclose, suggest, or render obvious the invention recited in claims 1-36.

For example, independent claim 1 (emphasis added), recites:

A computer-implemented method for transferring rights adapted to be associated with items from a rights supplier to a rights consumer, the method comprising:

obtaining a set of rights associated with an item, the set of rights including meta-rights specifying derivable rights that can be derived from the meta-rights, wherein the meta-rights are provided in digital form and are enforceable by a repository;

determining, by a repository, whether the rights consumer is entitled to the derivable rights specified by the meta-rights; and

deriving at least one right from the derivable rights, if the rights consumer is entitled to the derivable rights specified by the meta-rights, wherein the derived right includes at least one state variable based on the set of rights and used for determining a state of the derived right.

Independent claim 12 (emphasis added), recites:

A system for transferring rights adapted to be associated with items from a rights supplier to a rights consumer, the system comprising:

means for obtaining a set of rights associated with an item, the set of rights including meta-rights specifying derivable rights that can be derived from the meta-rights, wherein the meta-rights are provided in digital form and are enforceable by a repository;

means for determining whether the rights consumer is entitled to the derivable rights specified by the meta-rights; and

means for deriving at least one right from the derivable rights, if the rights consumer is entitled to the derivable rights specified by the meta-rights, wherein the derived right includes at least one state variable based on the set of rights and used for determining a state of the derived right.

Independent claim 24 (emphasis added), recites:

A device for transferring rights adapted to be associated with items from a rights supplier to a rights consumer, the device comprising:

means for obtaining a set of rights associated with an item, the set of rights including meta-rights specifying derivable rights that can be derived from the meta-rights, wherein the meta-rights are provided in digital form and are enforceable by a repository;

means for determining whether the rights consumer is entitled to the derivable rights specified by the meta-rights; and means for deriving at least one right from the derivable rights, if the rights consumer is entitled to the derivable rights specified by the meta-rights, wherein the derived right includes at least one state variable based on the set of rights and used for determining a state of the derived right.

Thus, independent claims 1, 12 and 24 are directed to, in relevant part, the features of obtaining a set of rights associated with an item, the set of rights including meta-rights specifying derivable rights that can be derived from the meta-rights, determining whether the rights consumer is entitled to the derivable rights specified by the meta-rights, and deriving at least one right from the derivable rights, if the rights consumer is entitled to the derivable rights specified by the meta-rights, wherein the derived right includes at least one state variable based on the set of rights and used for determining a state of the derived right.

After reviewing the response to arguments section on pages 2-3 of the office action, as well as the rejection set forth on pages 6-10, Applicants respectfully submit that the Examiner may be confused about what is meant by "meta-rights" in the claims. Specifically, when considering whether or not Anand discloses "meta-rights specifying derivable rights", the Examiner asserts that "the attribute-value pairs of Anand correspond to the meta-rights of Wang." The Examiner references the following disclosures from Anand

- "Multiple principals can delegate a subset of their maximal permissions for the executable content. The mechanism uses policy for combining the delegated permissions into the content's current permissions" (col. 3, lines 27-31).
- "electing granted permissions from within an associated maximal set of permissions" (col. 3, lines 59-60).
- "As FIG. 2 depicts, the derivation mechanism (100) consists of the following five steps:", (col. 5, lines 1-2).

Application No. 10/956,121 Attorney Docket No. 111325-291300 Page 11 of 15

- "The current permissions (150), by definition, must always be a subset of the maximal permissions (140)", (col. 5, lines 14-16).
- "The description of executable content (120) is a set of attribute-value pairs. One possible embodiment is RDF ("Resource Description Framework") labels that describe the metadata of a website's URI ("Universal Resource Identifier")", (col. 5, lines 17-21).

The above portions of Anand do not disclose "meta-rights specifying derivable rights that can be derived from the meta-rights" as recited in the claims. Instead, these portions of Anand relate to the derivation mechanism of Anand and how it is implemented.

For example, with respect to col. 3, lines 27-31, of Anand, there is a fundamental difference between the notion of capability (i.e. capability to derive) and the notion of right (i.e. the right to derive). Though both are related to doing, a capability is whether or not someone is capable of doing something – often stated by "can do", whereas a right is whether or not someone is allowed or permitted to do something – often stated by "may or may not do" in the situations of "can do". Hence, having a capability (implemented as a mechanism) to, or can, derive rights/permissions does not entail having a right to do the same. This is similar to the situations that one can speak but may not have the right or freedom of speech and that one machine can execute a program but may not have the right to execute the program.

In the present application, a meta-right is considered to be "a right specifying derivable rights" and when a meta-right is exercised, rights can be derived from the derivable rights, resulting in derived rights. In this notion, a meta-right must be a right first, and specify derivable rights second. Therefore, the statement "one can delegate (permissions) ..." does not imply the statement "one has a right to delegate (permissions) ..." or "one has a meta-right to delegate (permission) ...". In summary, disclosing how to implement a capability to derive rights/permissions does not imply disclosing how to specify or implement a right to regulate or govern the capability.

Moreover, as Anand stated in the first line of its Summary of the Invention: "The present invention defines a dynamic derivation mechanism that enables limited permissions to be dynamically and flexibly derived for executables based upon their authenticated description." (col. 3, lines 15-18). Therefore, Anand is about a derivation mechanism and is not about metarights for regulating or governing derivation of rights.

In addition, Applicants respectfully submit that Anand fails to disclose or suggest at least the claimed features of "determining whether the rights consumer is entitled to the derivable rights specified by the meta-rights" as recited in the claims.

Specifically, the Examiner asserts that Anand regulates who is entitled to derive rights through an access control in Fig. 4 described by stating that "The access control list (325) limits access to the policy graph (320). Principals can be permitted to modify any of the policy graph attributes (321-325)". (Anand, col. 6, lines 26-29).

If the Examiner intended to reference access control list (325) in Fig. 3 of Anand instead of the access control list (325) in Fig. 4, this list only limits which principals may access the policy graph (320) that includes the access control list (325) itself. This, however, would only regulate modification of the attributes of the policy graph, namely, the downloading principal (321), the traversal method (322), the combination method (323), the directed graph (324) and the access control list (325). Modifying these attributes (321-325) is not same as deriving rights or permissions. Moreover, this modification is not part of the five steps of the derivation mechanism depicted in Fig. 2, which means that this modification is not a result of exercising a meta-right to derive (permissions).

If the Examiner instead intended to refer to the access control list of Fig. 4, not in Fig.3, the following description of about Fig. 4 does not support the Examiner's argument: "As shown in FIG. 4, the nodes (400) of a policy graph's (320) directed graph (324) consist of an attribute (410), a value (420), an entry (430), and an access control list (440). The traversal method uses the node attribute (410) and node value (420) to match the node with the content's description

(120). If a match occurs, then the combination method (323) applies the node entry (430) to the current result derived so far from the policy graph traversal (810). In a preferred embodiment, node entries (430) refer to permissions. The access control list (440) controls access to the node. In a preferred embodiment, principals can be permitted to read, write, delete, and create children of the node." (Col. 6, lines 30-41).

Applicants point out that "the node" whose access is controlled by the access control list (440) lacks of reference. A reasonable reference from the context is that it refers the node (440) of a policy graph's (320) directed graph (324). However, this would only limit access to "children of the node", namely, the attribute (410), the value (420), the entry (430), and the access control list (440). Modifying these children (410, 420, 430 and 440) is not same as deriving rights or permissions or exercising a meta-right to derive rights.

Finally, the site security policy of Anand is only used in deriving permissions, not in determining if one has the right to derive. This can be seen from the disclosure of Anand, Col. 6, lines 28-35: "FIG. 3 shows the site security policy (130). It includes sets of policy graphs (320) used to derive the maximal permissions contributions (150) that any principal can delegate to the content and sets of permissions propositions (300,310) used to compute the current and maximal permissions (140,150) from the maximal permissions contributions (150) and the current permissions contributions delegated by those principals". Moreover, none of the five steps depicted in Fig. 2 has anything to do with determining or governing the right to derive permissions, that is, the meta-right to derive.

Additionally, with respect to the Examiner's assertion that Anand discloses a "state variable" as recited in the claims, Applicants respectfully submit that the Examiner appears to consider the attributes values of the Derivation Instance of Anand to be the same as the state variables of the invention (i.e. "wherein the derived right includes at least one state variable based on the set of rights and used for determining a state of the derived right"). Applicants

respectfully disagree. The attributes values of the Derivation Instance of Anand are constant for the instance and do not change to maintain the state of rights as described in the application.

Finally, with respect to the Examiner's assertion that Infrastructure and Curtis in combination discloses a state machine which consists of state variables, Applicants point out that Infrastructure merely discloses a single statement, "[a] contract between an author and a publisher is like a dynamic state machine", and provides no elaboration on what the statement means. It is not clear how a contract as a (static) agreement can be a (dynamic) state machine. In any case, the statement is definitely not directed to any further agreements or promises (e.g., "derived right") that can be derived from the contract. Furthermore, a state variable used in a state machine as disclosed by Curtis, Col. 9, lines 53-55: "Within the state machine, while a state variable does not equal exit 1301, the state machine will go from state to state based upon what the state variable is set to" is created by a software program for carrying out a process flow. Thus, the contract of Infrastructure does not include a "state variable based on the set of rights and used for determining a state of the derived right" as is recited in independent claims 1, 12 and 24. Applicants further submit that the notion of a state variable in a process flow, as described in the above cited passage of Curtis, and the notion of a state variable of the application are unrelated ideas.

At least for the reasons set forth above, Applicants respectfully submit that neither Anand nor Infrastructure, taken alone or in combination, disclose, suggest, or render obvious the invention recited in independent claims 1, 12, and 24. The dependent claims are allowable at least by virtue of their dependency from one of the independent claims, and also on their own merits.

In view of the foregoing, it is submitted that the present application is in condition for allowance and a notice to that effect is respectfully requested. However, if any issue remains after considering this response, the Examiner is invited to call the undersigned to expedite the prosecution and work out any such issue by telephone.

Application No. 10/956,121 Attorney Docket No. 111325-291300 Page 15 of 15

Except for issue fees payable under 37 C.F.R. § 1.18, the Commissioner is hereby authorized by this paper to charge any additional fees during the entire pendency of this application including fees due under 37 C.F.R. §§ 1.16 and 1.17 which may be required, including any required extension of time fees, or credit any overpayment to Deposit Account No. 19-2380. This paragraph is intended to be a **CONSTRUCTIVE PETITION FOR EXTENSION OF TIME** in accordance with 37 C.F.R. § 1.136(a)(3).

Respectfully submitted,

NIXON PEABODY LLP

Date: May 28, 2009 /Stephen M. Hertzler, Reg. No. 58,247/

Stephen M. Hertzler Reg. No. 58,247

NIXON PEABODY LLP 401 9th Street, N.W., Suite 900 Washington, D.C. 20004-2128 (202) 585-8000 (202) 585-8080 (Fax) Customer No. 22204

Amendments to the Claims:

This listing of claims replaces all prior versions, and listings, of the claims in the subject application.

1. (Currently Amended) A <u>computer-implemented</u> method for transferring rights adapted to be associated with items from a rights supplier to a rights consumer, the method comprising:

obtaining a set of rights associated with an item, the set of rights including meta-rights specifying derivable rights that can be derived from the meta-rights, wherein the meta-rights are provided in digital form and are enforceable by a repository;

determining, by a repository, whether the rights consumer is entitled to the derivable rights specified by the meta-rights; and

deriving at least one right from the derivable rights, if the rights consumer is entitled to the derivable rights specified by the meta-rights, wherein the derived right includes at least one state variable based on the set of rights and used for determining a state of the derived right.

- 2. (Original) The method of claim 1, wherein the state variable inherits a state thereof for content usage or rights transfer from the set of rights.
- 3. (Original) The method of claim 1, wherein the state variable shares a state thereof for content usage or rights transfer with the set of rights.
- 4. (Original) The method of claim 1, wherein the state variable inherits a remaining state for content usage or rights transfer from the set of rights.
- 5. (Original) The method of claim 1, wherein the state variable is updated upon exercise of a right associated with the state variable.

Page 3 of 15

6. (Original) The method of claim 1, further comprising deriving a plurality of rights

from the derivable rights, wherein the state variable is shared by the derived rights.

7. (Original) The method of claim 1, wherein the state variable represents a collection of

states.

8. (Original) The method of claim 1, further comprising a plurality of state variables that

determine the state of the derived right.

9. (Original) The method of claim 1, wherein the at least one state variable is

unspecified in the derived right, is created during a rights transfer, and is assigned to the derived

right.

10. (Original) The method of claim 1, wherein the state variable is transferred from the

derivable rights to the derived right.

11. (Original) The method of claim 1, further comprising generating a license including

the derived right, if the rights consumer is entitled to the derivable rights specified by the meta-

rights.

12. (Currently Amended) A system for transferring rights adapted to be associated with

items from a rights supplier to a rights consumer, the system comprising:

means for obtaining a set of rights associated with an item, the set of rights including

meta-rights specifying derivable rights that can be derived from the meta-rights, wherein the

meta-rights are provided in digital form and are enforceable by a repository;

means for determining whether the rights consumer is entitled to the derivable rights

specified by the meta-rights; and

12453170.1

Petitioner Apple Inc. - Exhibit 1002, p. 6492

Page 4 of 15

means for deriving at least one right from the derivable rights, if the rights consumer is

entitled to the derivable rights specified by the meta-rights, wherein the derived right includes at

least one state variable based on the set of rights and used for determining a state of the derived

right.

13. (Original) The system of claim 12, wherein the state variable inherits a state thereof

for content usage or rights transfer from the set of rights.

14. (Original) The system of claim 12, wherein the state variable shares a state thereof

for content usage or rights transfer with the set of rights.

15. (Original) The system of claim 12, wherein the state variable inherits a remaining

state for content usage or rights transfer from the set of rights.

16. (Original) The system of claim 12, wherein the state variable is updated upon

exercise of a right associated with the state variable.

17. (Original) The system of claim 12, further comprising means for deriving a plurality

of rights from the derivable rights, wherein the state variable is shared by the derived rights.

18. (Original) The system of claim 12, wherein the state variable represents a collection

of states.

19. (Original) The system of claim 12, including a plurality of state variables that

determine the state of the derived right.

12453170.1

Petitioner Apple Inc. - Exhibit 1002, p. 6493

Page 5 of 15

20. (Original) The system of claim 12, wherein the at least one state variable is unspecified in the derived right, is created during a rights transfer, and is assigned to the derived right.

21. (Original) The system of claim 12, wherein the state variable is transferred from the derivable rights to the derived right.

22. (Original) The system of claim 12, further comprising means for generating a license including the derived right, if the rights consumer is entitled to the derivable rights specified by the meta-rights.

23. (Original) The system of claim 12, wherein the means for obtaining, the means for determining, and the means for deriving comprise at least one of computer-executable instructions, and devices of a computer system.

24. (Currently Amended) A device for transferring rights adapted to be associated with items from a rights supplier to a rights consumer, the device comprising:

means for obtaining a set of rights associated with an item, the set of rights including meta-rights specifying derivable rights that can be derived from the meta-rights, wherein the meta-rights are provided in digital form and are enforceable by a repository;

means for determining whether the rights consumer is entitled to the derivable rights specified by the meta-rights; and

means for deriving at least one right from the derivable rights, if the rights consumer is entitled to the derivable rights specified by the meta-rights, wherein the derived right includes at least one state variable based on the set of rights and used for determining a state of the derived right.

25. (Original) The device of claim 24, wherein the state variable inherits a state thereof for content usage or rights transfer from the set of rights.

Page 6 of 15

26. (Original) The device of claim 24, wherein the state variable shares a state thereof for content usage or rights transfer with the set of rights.

27. (Original) The device of claim 24, wherein the state variable inherits a remaining

state for content usage or rights transfer from the set of rights.

28. (Original) The device of claim 24, wherein the state variable is updated upon

exercise of a right associated with the state variable.

29. (Original) The device of claim 24, further comprising means for deriving a plurality

of rights from the derivable rights, wherein the state variable is shared by the derived rights.

30. (Original) The device of claim 24, wherein the state variable represents a collection

of states.

31. (Original) The device of claim 24, including a plurality of state variables that

determine the state of the derived right.

32. (Original) The device of claim 24, wherein the at least one state variable is

unspecified in the derived right, is created during a rights transfer, and is assigned to the derived

right.

33. (Original) The device of claim 24, wherein the state variable is transferred from the

derivable rights to the derived right.

Petitioner Apple Inc. - Exhibit 1002, p. 6495

Application No. 10/956,121 Attorney Docket No. 111325-291300 Page 7 of 15

- 34. (Original) The device of claim 24, further comprising means for generating a license including the derived right, if the rights consumer is entitled to the derivable rights specified by the meta-rights.
- 35. (Original) The device of claim 24, wherein the means for obtaining, the means for determining, and the means for deriving comprise at least one of computer-executable instructions, and devices of a computer system.
- 36. (Original) The device of claim 24, wherein one or more of the means for obtaining, the means for determining, and the means for deriving are specified in a license.

This collection of information is required by 37 CFR 1.114. The information is required to obtain or retain a benefit by the public which is to file (and by the USPTO to process) an application. Confidentiality is governed by 35 U.S.C. 122 and 37 CFR 1.11 and 1.14. This collection is estimated to take 12 minutes to complete, including gathering, preparing, and submitting the completed application form to the USPTO. Time will vary depending upon the individual case. Any comments on the amount of time you require to complete this form and/or suggestions for reducing this burden, should be sent to the Chief Information Officer, U.S. Patent and Trademark Office, U.S. Department of Commerce, P.O. Box 1450, Alexandria, VA 22313-1450.

If you need assistance in completing the form, call 1-800-PTO-9199 and select option 2.

Privacy Act Statement

The Privacy Act of 1974 (P.L. 93-579) requires that you be given certain information in connection with your submission of the attached form related to a patent application or patent. Accordingly, pursuant to the requirements of the Act, please be advised that: (1) the general authority for the collection of this information is 35 U.S.C. 2(b)(2); (2) furnishing of the information solicited is voluntary; and (3) the principal purpose for which the information is used by the U.S. Patent and Trademark Office is to process and/or examine your submission related to a patent application or patent. If you do not furnish the requested information, the U.S. Patent and Trademark Office may not be able to process and/or examine your submission, which may result in termination of proceedings or abandonment of the application or expiration of the patent.

The information provided by you in this form will be subject to the following routine uses:

- 1. The information on this form will be treated confidentially to the extent allowed under the Freedom of Information Act (5 U.S.C. 552) and the Privacy Act (5 U.S.C. 552a). Records from this system of records may be disclosed to the Department of Justice to determine whether the Freedom of Information Act requires disclosure of these record s.
- 2. A record from this system of records may be disclosed, as a routine use, in the course of presenting evidence to a court, magistrate, or administrative tribunal, including disclosures to opposing counsel in the course of settlement negotiations.
- A record in this system of records may be disclosed, as a routine use, to a Member of Congress submitting a
 request involving an individual, to whom the record pertains, when the individual has requested assistance from the
 Member with respect to the subject matter of the record.
- 4. A record in this system of records may be disclosed, as a routine use, to a contractor of the Agency having need for the information in order to perform a contract. Recipients of information shall be required to comply with the requirements of the Privacy Act of 1974, as amended, pursuant to 5 U.S.C. 552a(m).
- 5. A record related to an International Application filed under the Patent Cooperation Treaty in this system of records may be disclosed, as a routine use, to the International Bureau of the World Intellectual Property Organization, pursuant to the Patent Cooperation Treaty.
- 6. A record in this system of records may be disclosed, as a routine use, to another federal agency for purposes of National Security review (35 U.S.C. 181) and for review pursuant to the Atomic Energy Act (42 U.S.C. 218(c)).
- 7. A record from this system of records may be disclosed, as a routine use, to the Administrator, General Services, or his/her designee, during an inspection of records conducted by GSA as part of that agency's responsibility to recommend improvements in records management practices and programs, under authority of 44 U.S.C. 2904 and 2906. Such disclosure shall be made in accordance with the GSA regulations governing inspection of records for this purpose, and any other relevant (i.e., GSA or Commerce) directive. Such disclosure shall not be used to make determinations about individuals.
- 8. A record from this system of records may be disclosed, as a routine use, to the public after either publication of the application pursuant to 35 U.S.C. 122(b) or issuance of a patent pursuant to 35 U.S.C. 151. Further, a record may be disclosed, subject to the limitations of 37 CFR 1.14, as a routine use, to the public if the record was filed in an application which became abandoned or in which the proceedings were terminated and which application is referenced by either a published application, an application open to public inspections or an issued patent.
- 9. A record from this system of records may be disclosed, as a routine use, to a Federal, State, or local law enforcement agency, if the USPTO becomes aware of a violation or potential violation of law or regulation.

This Acknowledgement Receipt evidences receipt on the noted date by the USPTO of the indicated documents, characterized by the applicant, and including page counts, where applicable. It serves as evidence of receipt similar to a Post Card, as described in MPEP 503.

New Applications Under 35 U.S.C. 111

If a new application is being filed and the application includes the necessary components for a filing date (see 37 CFR 1.53(b)-(d) and MPEP 506), a Filing Receipt (37 CFR 1.54) will be issued in due course and the date shown on this Acknowledgement Receipt will establish the filing date of the application.

National Stage of an International Application under 35 U.S.C. 371

If a timely submission to enter the national stage of an international application is compliant with the conditions of 35 U.S.C. 371 and other applicable requirements a Form PCT/DO/EO/903 indicating acceptance of the application as a national stage submission under 35 U.S.C. 371 will be issued in addition to the Filing Receipt, in due course.

New International Application Filed with the USPTO as a Receiving Office

If a new international application is being filed and the international application includes the necessary components for an international filing date (see PCT Article 11 and MPEP 1810), a Notification of the International Application Number and of the International Filing Date (Form PCT/RO/105) will be issued in due course, subject to prescriptions concerning national security, and the date shown on this Acknowledgement Receipt will establish the international filing date of the application.

Under the Paperwork Reduction Act of 1995, no persons are required to respond to a collection of information unless it displays a valid OMB control number.

DETAILED ACTION

Status of Claims

1. The Final Office Action dated 10-16-08 is withdrawn. This action is in reply to the Arguments/Remarks filed 7-14-08.

2. Claims 1-36 are currently pending and have been examined.

Double Patenting

3. The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. A nonstatutory obviousness-type double patenting rejection is appropriate where the conflicting claims are not identical, but at least one examined application claim is not patentably distinct from the reference claim(s) because the examined application claim is either anticipated by, or would have been obvious over, the reference claim(s). See, e.g., *In re Berg*, 140 F.3d 1428, 46 USPQ2d 1226 (Fed. Cir. 1998); *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) or 1.321(d) may be used to overcome an actual or provisional rejection based on a nonstatutory

Art Unit: 3621

double patenting ground provided the conflicting application or patent either is shown to be commonly owned with this application, or claims an invention made as a result of activities undertaken within the scope of a joint research agreement.

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

Claims 1-36 are provisionally rejected on the ground of nonstatutory double patenting over claim 6 of copending Application No. 10162701. This is a provisional double patenting rejection since the conflicting claims have not yet been patented.

The subject matter claimed in the instant application is fully disclosed in the referenced copending application and would be covered by any patent granted on that copending application since the referenced copending application and the instant application are claiming common subject matter, as follows: meta-rights, derived rights, rights transfer, generating a license.

Furthermore, there is no apparent reason why applicant would be prevented from presenting claims corresponding to those of the instant application in the other copending application. See *In re Schneller*, 397 F.2d 350, 158 USPQ 210 (CCPA 1968). See also MPEP § 804.

Art Unit: 3621

Claim Rejections - 35 USC § 101

4. Claims 1-36 are rejected under 35 U.S.C. §101 because the claimed invention is directed to non-statutory subject matter. Based on Supreme Court precedent¹ and recent Federal Circuit decisions, a §101 patent eligible process must (1) be tied to a particular machine (or apparatus), or (2) transform a particular article to a different state or thing. See *In re Bilski*, 545 F.3d 943, 88 USPQ2d 1385 (Fed. Cir. 2008)(en banc). This is the Machine-or-Transformation Test ("M-T Test").

To meet prong (1), the method step should positively recite machine to which it is tied. Alternatively or to meet prong (2), the method step should positively recite the material that is being changed to a different state or positively recite the subject matter that is being transformed. For example, a method claim that would *not* qualify as a patent eligible process because it fails both prongs of the M-T Test would be a claim that recites purely mental steps.

In this particular case, the process claims fail prong (1) because the methods steps "obtaining a set of rights", "deriving at least one right" are not tied to a specific machine since the methods steps could be performed by a human being, since the steps do not disclose specifically how they are performed. Finally, the Examiner notes that the claims fail prong (2) because the method steps do not transform the underlying subject matter to a different state or thing.

¹ See also *Diamond v. Diehr*, 450 U.S. 175, 184 (1981); *Parker v. Flook*, 437 U.S. 584, 588 n.9 (1978); *Gottschalk v. Benson*, 409 U.S. 63, 70 (1972); *Cochrane v. Deener*, 94 U.S. 780, 787-88 (1876).

Art Unit: 3621

Claim Rejections - 35 USC § 103

5. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

6. Claims 1-36 are rejected under U.S.C. 103(a) as being unpatentable over Anand, US Patent No. 6,044,466 (Anand), in view of Workshop on Digital Rights Management, Minutes from Architecture/Infrastructure Session (Infrastructure).

Claims 1, 12, 24:

Anand, as shown, discloses the following limitations:

obtaining a set of rights associated with an item, the set of rights including metarights specifying derivable rights that can be derived from the meta-rights, wherein the meta-rights are provided in digital form and are enforceable by a repository (see column 3, line 15-31, column 5, lines 17-23, column 5, lines 1-16)

determining, by a repository, whether the rights consumer (user) is entitled to the derivable rights specified by the meta-rights (see col. 3, lines 27-31, column 5, line 14-21, col. 3, lines 32-35)

deriving at least one right from the derivable rights, if the rights consumer is entitled to the derivable rights specified by the meta-rights, wherein the derived right includes at least one state variable based on the set of rights and used for

Art Unit: 3621

determining a state of the derived right (see column 5, line 1-16, col. 3, lines 32-35, col. 5, lines 17-21)

Anand discloses the limitations as shown above. Anand does not directly disclose a state variable (state machine), but Infrastructure does (page 8, paragraph 3)

It would have been obvious to one of ordinary skill in the art at the time of the invention to modify Anand to include the state machine of Infrastructure since this provides a dynamic structure that can express dynamic rights relationships.

Claims 2, 13, 25:

Anand, as shown, discloses the following limitations:

the state variable inherits a state thereof for content usage or rights transfer from the set of rights (see column 5, line 1-16)

Claims 3, 4, 14, 15, 26, 27:

Anand/Infrastructure discloses the limitations shown above. Anand further discloses:

the state variable shares a state thereof for content usage or rights transfer with the set of rights (see column 8, line 7-14)

the state variable inherits a remaining state for content usage or rights transfer from the set of rights (see column 5, line 14-16)

Claims 5, 16, 28:

Art Unit: 3621

Anand, as shown, discloses the following limitations:

the state variable is updated upon exercise of a right associated with the state variable (see column 7, line 5-14)

Claims 6, 17, 29:

Anand, as shown, discloses the following limitations:

deriving a plurality of rights from the derivable rights, wherein the state variable is shared by the derived rights (see column 7, line 1-7)

Claims 7, 8, 18, 19, 30, 31:

paragraph 3)

Anand discloses the limitations as shown above. Anand does not directly disclose a state variable (state machine), but Infrastructure does: the state variable represents a collection of states (see page 8, paragraph 3) a plurality of state variables that determine the state of the derived right (see page 8,

It would have been obvious to one of ordinary skill in the art at the time of the invention to modify Anand to include the state machine of Infrastructure since this provides a dynamic structure that can express dynamic rights relationships. Art Unit: 3621

Claims 9, 20, 32:

Anand, as shown, discloses the following limitations:

at least one state variable is unspecified in the derived right, is created during a rights transfer, and is assigned to the derived right (see column 7, line 1-14)

Claims 10, 21, 33:

Anand, as shown, discloses the following limitations:

the state variable is transferred from the derivable rights to the derived right (see column 7, line 15-23)

Claims 11, 22, 34, 36:

Anand, as shown, discloses the following limitations:

generating a license including the derived right, if the rights consumer is entitled to the derivable rights specified by the meta-rights (see column 7, line 24-29) one or more of the means for obtaining, the means for determining, and the means for deriving are specified in a license (see column 7, line 24-29)

Claim 35:

Anand, as shown, discloses the following limitations:

Art Unit: 3621

obtaining, the means for determining, and the means for deriving comprise at least one of computer-executable instructions, and devices of a computer system (see column 4, line 51-67)

Response to Arguments

7. Applicant's arguments filed 7-14-08 have been fully considered but they are not persuasive. Applicant's arguments will be addressed in sequential order as they were set forth in the "Remarks" section on the above date. The 101 rejection is maintained for the reasons described herein under that title. The Double Patenting rejection will be maintained since it may be missed later on. Applicant argues that Anand does not disclose meta-rights specifying derivable rights. Specifically, Anand column 3, lines 15-31 disclose dynamic derivation (can do), superset of rights and delegation of a subset of maximal permissions (derivable rights specified by the meta-rights). Anand discloses, "Multiple principals can delegate a subset of their maximal permissions for the executable content. The mechanism uses policy for combining the delegated permissions into the content's current permissions" (col. 3, lines 27-31). Anand further discloses, "electing granted permissions from within an associated maximal set of permissions" (col. 3, lines 59-60). "As FIG. 2 depicts, the derivation mechanism (100) consists of the following five steps:", (col. 5, lines 1-2). "The current permissions (150), by definition, must always be a subset of the maximal permissions (140)", (col. 5, lines 14-16). "The description of executable content (120) is a set of attribute-value pairs. One possible embodiment is RDF ("Resource Description Framework") labels that describe the meta-data of a website's URI ("Universal Resource Identifier")", (col. 5,

Art Unit: 3621

lines 17-21). The attribute-value pairs of Anand correspond to the meta-rights of Wang. The Examiner has referenced the proper figures of Anand that where intended, specifically the ones as shown here. Anand further discloses, "FIG. 4 illustrates that the nodes of a policy graph's directed graph consist of an attribute, a value, an entry, and an access control list. FIG. 5 illustrates a preferred embodiment of the permissions structure, and shows that permissions include positive and negative rights and transforms. FIG. 7 illustrates how the first step of the dynamic derivation mechanism creates a derivation instance and sets its attributes values" (col. 4, lines 18-31. The state variables of Wang correspond to the derivation instance of Anand, fig. 7. Anand regulates who is entitled to derive rights through an access control described in fig. 4 referenced above. Anand controls who is entitled to derive rights, "The access control list (325) limits access to the policy graph (320). Principals can be permitted to modify any of the policy graph attributes (321-325)", (col. 6, lines 26-29). Infrastructure further discloses a state machine which consists of state variables, as defined by Curtis. "Within the state machine, while a state variable does not equal exit 1301, the state machine will go from state to state based upon what the state variable is set to", (Curtis, 6,397,355, col. 9, lines 53-55). A s tate variable (state machine) is shown by Infrastructure does (page 8, paragraph 3). The applicant has not provided an explanation for the assertion that the derivation instance of Anand is constant and does not change.

Art Unit: 3621

Conclusion

THIS ACTION IS MADE FINAL. Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Thomas West whose telephone number is 571-270-1236. The examiner can normally be reached on Tuesday and Wednesday 7:30am - 5pm EST.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Andrew Fischer can be reached on 571-272-6779. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR.

Status information for unpublished applications is available through Private PAIR only.

Art Unit: 3621

For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free). If you would like assistance from a USPTO Customer Service Representative or access to the automated information system, call 800-786-9199 (IN USA OR CANADA) or 571-272-1000.

Minutes from the Architecture/Infrastructure Session

Please refer to the position-papers and slides for authoritative answers. The following minutes are only a snapshot of Presentations and Discussions

- INDECS Framework Data Definitions Godfrey Rust (Indecs Project)
- URI's and Object Identifiers Dan Connolly (W3C)
- Principles for Standardization and Interoperability in Web-based Digital Rights Management John Erickson (Hewlett-Packard)
- Open Digital Rights Management Renato lannella (IPR Systems)
- Digital Object Identifier Norman Paskin (Int. DOI Foundation)
- Discussion

Godfrey Rust (<indecs> Project), INDECS Framework Data Definitions

See also the [Slides (ppt)] and the <indecs> Framework

The <indecs> project ended 2000, now we are new company called <indecs> framework. Look at our online document: Principles, model, and data dictionary, June 2000.

We see DRM in terms of metadata, as a metadata problem. The description is covered in Open eBook, ONIX, and my company.

Here is the scheme:

- 1. people make stuff
- 2. people use stuff

3. people do deals about stuff

The scope is stuff. This can be characterized in terms of:

- 1. Parties
- 2. Creations
- 3. Agreements

Rust projected a diagram showing the high granularity in the <indecs> model, with hierarchy of parties and agreements. He noted that you must pass along the metadata in a structured defined way to permit computational processes.

The following things are required:

- functional granularity: you must be able to identify stuff at any level of granularity
- unique id
- who says so designated authority
- appropriate access (who can do what)

In the 1980s, there were few schemes for description, today there are many, lists ten major ones, including MPEG-7, ONIX, SMPTE, RIAA/IFPI, and several more.

Here are the <indecs> principles:

- All metadata is just a view (example: about the work versus about the manifestation, and more, each of which may have its own rights)
 - views must not be confused; mistaken identity can be disastrous to rights management
 - o views need to be interoperable
- Almost all terms need identifiers
 - o values must be defined and identified
 - o need standard vocabularies and ontologies.
 - automation need for disambiguity. There is an existing vocabulary for some things: territories, language, currency, date/time and some others. But we need dozens of others.
- Events are key to interoperability
 - o most metadata is stuff or people based
 - o events description are key to rights management

Godfrey Rust gave an example how this would work:

- 1. make event the first class object, e.g., Rust creating these slides
- 2. then all the other elements are attributes: author, date, title, etc.
- next event, e.g., Rust showing this Slide -- it has attributes too and references the previous event, thus connecting the creative items
- next event: Norman Paskin adapts (transforming event) these slides before he shows it at another meeting, thus creating new attributes and references to preceding events, thus connecting the creative items

This model has the same information as other metadata structures, just organized differently to serve rights management.

Here's another event that bears on rights: agreeing. What goes into the agreement is what goes into descriptive metadata, what he had, what he did. Also assertion by a trusted entity that verifies or authenticates.

Using the event structure, now have six events regarding these slide-show. See how you can use events to **integrate** descriptive and rights metadata.

But we need rights vocabularies to make this work, on a parallel with the need for vocabularies to serve descriptive metadata.

Dan Connolly [W3C], W3C URI Design Principles

See also the corresponding Activity within W3C and the slides

He outlined W3C's Philosophy of Standards: Help people do the right thing.

URIs will have a relationship to a potential DRM-Activity. Connolly also suggests that DRM discussion focus on payments and rights negotiation as much as prevention of access.

All names are ultimately local. Global naming depends on social agreements and trust. HTTP is not the only protocol. For the Web, we use DNS (Domain Name System). Don't forget, HTML is not the only file type. Things can evolve, you can use proxies and thus use an old name against new protocol. But URIs are the only thing in that arena. New protocols can be used with existing names. There is no need to change names just because you change protocols. We don't need to make new URI schemes just because we have made a new data format.

There is opacity: Don't peek inside names, names (URIs) are not user interface. Don't reinvent redirection in http, it is not a service, they are not locators. DNS supports multiple A records. Lots of administrative hierarchies fit in current http and DNS, you don't need to

invent a new URI scheme.

URIs were not designed as a user interface. Don't use a URN as a brand name. To establish a new trusted brand name, trying to wedge them into DNS is a problem, you're ought to use <title>

John Erickson (HP), Principles for Standardization and Interoperability in Web-based Digital Rights Management

See also the slides and the Position Paper

John Erickson started by re-inforcing what was already heard during previous sessions: When we think about DRM, we have to separate expression of rights information and policies from the enforcement of those rights. We have to think of a layered model, separate the expression of rights information from the info for discovery and from implementing and enforcing those rights.

What is the W3C's role here? We think W3C should recommend a platform. Erickson put emphasis on the development of a language and a protocol for IPR policy expression, discovery, and interpretation.

The W3C should not recommend a standard DRM system. But we should provide a basis for the interoperability of such systems. Core should be to find a reliable way to express and transfer rights information. Remember the design principles of the web, IPR work ought not violate them.

Erickson developed the following set of requirements:

- never interfere with users' ability to discover info (incl rights info) on the web, this is what I
 mean by universal access, so I can decide about whether to access
- always communicate the policies and technical restraints in understandable language
- policies are communicated in fair and open ways
- need for trust, need to have a basis to trust the assertions being made, need a mechanism to assure trustworthiness
- IPR information and policies must be discoverable and minimally interpretable in dependent of any given vendor's solution
- the languages and protocols must be designed for evolution
- web based mechanism must allow for owners to choose different tools and consumers to use different tools to discover and interpret rights info
- cool new content that comes along ought not break the DRM systems or break the languages and protocols

Here's our [HP publishing group] proposal: PREP (Policy and Rights Expression Platform, see the <u>Position Paper</u> for more information). It would be a framework to express and interpret the policies and info. It should complement laws and self-regulatory programs. It should be consistent with prior work, e.g., P3P.

What are the building blocks of PREP?

- semantics policy interpretation mechanisms
- objects rights messaging protocol
- syntax rights expression languages

Erickson concluded:

- W3C should recommend a platform for IPR policy expression, discovery, and interpretation.
- 2. W3C should not recommend a standardized digital rights management system.
- 3. Core should be reliable way to express and transfer rights information.

Renato Iannella (IPR Systems), Open Digital Rights Management

See also the slides and the Position Paper

We need to define DRM formally. Customary DRM definitions tend to emphasize protection, enforcement, security. We need to remove the security/locking focus of DRM. There are a lot of definitions out there. But we want DRM to be broader: describe, identity, trade, monitor, track, and manage rights holder relationships. We want to leave behind the "creation waterfall" concept of create => trade => use as a line. We want to look at a circular life cycle approach (compare Rust events). We use the same terms: create-trade-use and add reuse = recreate. Then the life cycle is more accurately seen as circular. He gave an example of transparency in presenting rights, from Adobe eBook. You are authorized to get the copy. It is OK to copy (up to 10 times each week), to print, to lend. But you cannot give or read aloud. He suggested, that it should be possible to pay for usage, not possession.

The following are building blocks for a DRM architecture:

- A better metadata framework: He would like it to be in RDF
- Trust (digital signatures)
- There are lessons to learn from P3P, CC/PP
- identification (URIs)
- XML packaging and tools

use the <indecs> model: content, parties, rights. Each one is a kind of class. Parties
described would be: author, corporate, agent, publisher. The content would be classified
in work, expression, manifestation, item. Rights would be classified in usages, rewards,
constraints.

Renato lannella presented the <u>ODRL</u>. He sees it as a starting point for a DRM Language, that could be developed within W3C.

Concludes: W3C Role could be:

- W3C Digital Rights Language Working Group to develop semantaics of a digital rights language encoded in XML
- Trusted Metadata Working Group to develop architecture to support encoding and transmission of DRM and other metadata
- DRM Interest Group to discuss next steps and establish relationship with other communities

W3C can solve some part of the DRM problem, coordinate others, and empower the user community.

Norman Paskin (Int. DOI Foundation), Digital Object Identifier (DOI)

See also the slides (ppt) and the Position Paper

Paskin was presenting the activity of the DOI Foundation. We have spent three years developing an identifier system for digital objects. We have been influenced by <indecs> analysis and implementations, e.g., ONIX and by consideration of digital object infrastructure (e.g., CNRI work).

DRM must be maximally extensible. DRM is digital management of rights, not just management of digital rights Practical rights management will require dealing with both digital and non-digital rights. Unique identification is essential for automation to work on this.

Description info and rights info are not distinguishable. Any piece of description may be needed in a rights transaction.

Creative items used to be physical, today we have both a physical and digital manifestation, so sometimes there are two identifiers, e.g., ISBN for one, URL for the other. But if we are going to automate transactions we must dis-ambiguate meanings. We need to define word like book in the spaces it may found in, the ISBN space or the <indecs> space.

There will not be one model for applying identifiers, it will differ for content communities, given practical implications, e.g. ONIX, MPEG-7, etc. A work may be an original manuscript version, the work in the abstract, a draft, a copy in a publication, a digital copy not in a publication, a reprint, etc.. In each role, there will be different ids and attributes. We don't have to have complete knowledge representation. We can build on agreements over what an identifier means within a given namespace

About names and locations, he said that a name is a location in a defined namespace, thus all names are locations is trivially true.

As practical needs for DOI, Paskin identified:

- multiple instances
- · persistence in face of change
- · mgt of non-digital entities
- · de-referencing, resolution

Who should be responsible for naming: Standards bodies, rights collectives? Examples are:

- EAN/UPC bar code system
- ISBN system
- URI system But what in the digital realm?
- URLs are a poor system for publishers

Identifier needs to be actionable. They can be the basis for rights management. But there won't be one place to go for:

- e.g., directory of parties (names of people, sort of, as for music, is developing a directory)
- · e.g., ontology of scientific article

We need to involve stakeholders, what is the W3C good for here?

Paskin used an aphorism: I think what is called media convergence really is "people convergence" (with the correlative problem of communication). Formalisms are essential in their place but must be explained. What we ought to care about does not just encompass the web.

DOI system offers:

- · numbering use any identifier
- description can use <indecs> framework

- action handles allow to link to instances
- It is persistent, granular, flexible, can wrap other identifiers

Discussion

Not for all questions and answers, the author was identified. In this case, you'll see only question and answer

Question: is URI primarily address where you find something?

Dan Connolly (W3C): I don't think so.

Danny Weitzner (W3C): Question to Godfrey Rust and John Erickson: Is there a consensus point? John said there should be a rights management schema. How modular is the <indecs> system? Does anyone who uses something that falls under the <indecs> model have to use the whole model?

Godfrey Rust (<indecs>): It is a matter of how you structure your information. If we use the event model to organize our system, this should lead to interoperability. If one wants to express things in most efficient way, an events - systems will be very powerful. Other systems/legacy info can be transformed into events model One doesn't have to organize all data into high level of functionality. We can still use information that is fairly low grade.

John Erickson (HP): An event model is powerful, because it allows description of certain rights relationships that we might think of in terms of electronic contracts. If we speak about rights languages, we can imagine a lot of different types of transactions. There are things that need to be declared, between an author and a publisher. It is a dynamic activity with lots of outcomes that the event model can characterize. The event model is the basis of an ontology. We need different vocabularies for different purposes. A contract between an author and a publisher is like dynamic state machine. The event model is a powerful way to express that. Things like rights vouchers/licenses and output of individual states are dependant on dynamic events.

Maximilian Herberger (Uni Saarland): Events are only one side. The event model reflects the state of subjective rights within a specific contract. We also need a way to describe how things fit together or what things have in common. We need a language at a higher level about objective rights. This language should be able to express classes of contract relationships. I think the combination of the two is the solution here.

Jonathan Schull (Digital Goods): Suppose I'm a publisher and I want to publish a book electronically. There are a whole lot of ways to do this. Each combination will have a

different address, thus creating a different digital object. A publisher doesn't really care about the locations, he only cares about initial work. He may decide that people shouldn't print it, or that people want their money back. As a publisher, I want to have only one thing to do.

Jonathan D. Hahn (Versaware): In a contrarian mode I say, well, about these "events," you know publishers may think of only one event, the one that came into play when I signed on to publish this work.

Godfrey Rust (<indecs>): A DOI is a single number for the object

Dan Connolly (W3C): What's the first letter of most DOIs? Names are little pieces of communication. Making up a name without thinking about communication is sort of silly. We don't decide anything by ourselves, we decide together with people we communicate with. I don't think you can invent new technology that solves all the social problems involved

Norman Paskin (DOI): The web is not the universal information space. There are things, which aren't on the web. We need to identify them too.

Eric Miller (OCLC): you can place something on the web without using DOI. I represent libraries, so if you publish, you want consumer to get access to stuff - you have to talk to your customer base to find out whether they will use access mechanism you are designing to access content. What are the things we are trying to automate here? Let's think about a scenario with implemented DRM, let's do what-if scenarios.

Question: Why are ontologies so important?

Answer: Take a look at ontologies and what publishers require and you have your problem defined

Eric Miller (OCLC): A question not yet resolved is, what happens in DRM if different kinds of people are accessing the same object, e.g. in the context of a library.

Robert Bollick, (McGraw-Hill): This is already covered. It is like every consumer/publisher interaction which is covered by the requirements. More information can be found on <u>publishers.org</u>. The name of the document is publishers DRM requirements.

Comment: We will get a lot of input/requirements from many different constituencies, e.g. record industry, book industry etc.. We need to consider the evolution of technology - technical components should be able to move indepently from one another. We have a conceptual model: Take a language and a context used by different areas and avoid using

two different terms for same requirement. We need to build a common platform. That gives you a mechanism to do extensions that are truly unique. Medicine, oil-drilling all use different terminology, but a conceptual model helps us to decide whether their need is unique and helps us develop an orthogonal system, and avoid redundancy

Scott Foshee, (Adobe) states agreement with the interest in fine-grained identification implied by the <indecs>/DOI ideas.

Question: We won't be able to define precisely what work is. We should avoid defining it. While broad categories of interactions may have been studied, do you think your publishing model is extensible to images, text, font? To Godfrey Rust: Do you think we can extend this to publishing of aggregations, e.g. written book by an author combined with paper it is printed on?

Godfrey Rust (<indecs>): Take a look at indecs papers. The answer is yes, I think this is possible.

Answer: The same is true for ONIX - thinking about selling pieces of a work

Danny Weitzner (W3C): Commenting on Norman's point of the Web not being the univerals information space, I think that in the discussions so far we showed lots of attention on commercial needs. The question is whether we would like common framework for discovering rights of document whether or not produced principally for trade or not? E.g., does a picture of my 3-year old fit into this framework? We risk to produce big costs if there are two classes of documents: One that fits into trading and others who don't. If we look at music, we see, that non-traditional documents are traded. I'm a bit concerned about the application of these systems only to "trade" items in the web, ignoring or disenfranchising the little objects which also have rights associated with them.

Godfrey Rust (<indecs>): The model we worked on are neutral as far as commerce is concerned. It can be used for picture of 3 year old. We haven't actually developed framework though. A critical piece of work is to decide what those verbs (note: for the actions) are. The model still needs a lot of detailed work. We have roughly agreed on the direction we take. Please don't overestimate what we've done.

Norman Paskin (DOI): <indecs>/DOI is about transactions. We mean by transaction anything, whether it's free or not. We focused on e-commerce. Our economic model is based on the barcode model. For some transactions, the financial cost will be zero.

John Erickson (HP): What is the methodology for rationalising to interpret new dimensions for a given problem space? There has been a lot of talk about notion of ontologies. We

have a certain way of thinking about a problem, and perhaps another way. Now we try to find ontologies to identify common points. Where does the notion of rationalizing problem spaces conflict with ontologies? I can see that it resonates in a closed room ...

Rob Koenen, MPEG: MPEG-7 is standard for describing content. Based on XML schema, there are principle notions like actor, people etc. Those are listed in a concepts list. There are basic concepts like shape, color etc. People can build their own ontology. MPEG has just decided to do a data dictionary for a rights language. MPEG has issued a call for requirements on 19 January 2001. Koenen invited W3C to work with MPEG on working on this problem

Peter Schirling (IBM & MPEG): We should try to avoid unnecessary duplication. We allow each discipline to build an ontology from a common frame, to reduce duplication of elements. Under that framework, different sectors can add their own things to a specific concepts list. Currently, we have only concept lists very specific to audio-visual content.

Scott Foshee (Adobe): There are two classes of objects (things): Under control and not under control. I wanted to state my agreement with Danny Weitzner, that there should only be one class. Clipart in a presentation software is an aggregation with content you created. By using a product that was licensed, everything on a harddisk is aggregated content work. DRM should be able to handle that. Take a picture of Danny Weitzner and apply a filter may result in aggregate work. The process that is applied results in another object. We need to get something that is workable, because this technology will be everywhere

Coffee Break, but not enough coffee for some

New Applications Under 35 U.S.C. 111

If a new application is being filed and the application includes the necessary components for a filing date (see 37 CFR 1.53(b)-(d) and MPEP 506), a Filing Receipt (37 CFR 1.54) will be issued in due course and the date shown on this Acknowledgement Receipt will establish the filing date of the application.

National Stage of an International Application under 35 U.S.C. 371

If a timely submission to enter the national stage of an international application is compliant with the conditions of 35 U.S.C. 371 and other applicable requirements a Form PCT/DO/EO/903 indicating acceptance of the application as a national stage submission under 35 U.S.C. 371 will be issued in addition to the Filing Receipt, in due course.

New International Application Filed with the USPTO as a Receiving Office

If a new international application is being filed and the international application includes the necessary components for an international filing date (see PCT Article 11 and MPEP 1810), a Notification of the International Application Number and of the International Filing Date (Form PCT/RO/105) will be issued in due course, subject to prescriptions concerning national security, and the date shown on this Acknowledgement Receipt will establish the international filing date of the application.

SUPPLEMENTAL RESPONSE

Commissioner for Patents P.O. Box 1450 Alexandria, VA 22313-1450

Sir:

In response to the final Office Action mailed August 19, 2009, in furtherance of the Notice of Appeal filed December 22, 2009, and in response to the recent interviews with Examiner West and Supervisory Examiner Fischer, Applicants request reconsideration and immediate allowance based on the following amendments and remarks.

Amendments to the Claims begin on page 2 of this paper.

Remarks begin on page 8 of this paper.

REMARKS

Claims 1-36 are pending in the present application. Applicants thank Examiner West and Supervisory Examiner Fischer for repeatedly discussing this application with Applicants, and for their willingness to review Applicants' proposals. Claims 1, 6, 8-12, 17, 19-24, 29, and 31-36 are amended herein to clarify the invention in accordance with the Examiner's suggestions. No new matter has been added. In accordance with the discussions with the Examiners, Applicants request reconsideration and allowance of the application in view of the above amendments and the following remarks.

Claims 1-36 stand provisionally rejected on the ground of non-statutory double-patenting over claim 6 of co-pending Application No. 10162701. Applicants respectfully request that this provisional rejection be held in abeyance until this application is otherwise in condition for allowance, at which point Applicants will consider filing a Terminal Disclaimer.

Claims 1-36 stand rejected under 35 U.S.C. § 101 as being related to non-statutory subject matter. As stated previously, claims 1, 12, and 24 each recite that "the meta-rights are provided in digital form and are enforceable by a repository," and a "right" is created by executing the claimed meta-right. Thus, these claims clearly satisfy the requirements of 35 U.S.C. § 101.

Claims 1-36 stand rejected under 35 U.S.C. §103(a) as being unpatentable over Anand et al. (U.S. Patent No. 6,044,466) in view of "Workshop on Digital Rights Management, Minutes from Architecture/Infrastructure Session" (hereafter, Infrastructure).

Based on discussions with the Examiners, Applicants amend the claims herein to clarify that the claimed set of rights includes a "meta-right specifying a right that can be created when the meta-right is exercised," and specify that the meta-right is exercised to "create the right specified by the meta-right if the rights consumer is entitled to the right specified by the meta-right." As acknowledged by the Examiners, the applied prior art, including Anand and Infrastructure), fail to disclose, suggest, or render obvious at least these features.

12922500.1

Application No. 10/956,121 Attorney Docket No. 111325-291300

Page 9 of 9

For at least the reasons set forth above, Applicants respectfully submit that neither Anand

nor Infrastructure, taken alone or in combination, disclose, suggest, or render obvious the

invention recited in independent claims 1, 12, and 24. The dependent claims are allowable at

least by virtue of their dependency from one of the independent claims, and also on their own

merits.

In view of the foregoing, Applicants respectfully request entry of the above amendments

and submit that this application is in condition for immediate allowance. A notice to that effect

is solicited. If any issue remains after considering this response, the Examiner is encouraged to

call the undersigned to expedite the prosecution and work out any such issue by telephone.

Except for issue fees payable under 37 C.F.R. § 1.18, the Commissioner is hereby

authorized by this paper to charge any additional fees during the entire pendency of this

application including fees due under 37 C.F.R. §§ 1.16 and 1.17 which may be required,

including any required extension of time fees, or credit any overpayment to Deposit Account No.

19-2380. This paragraph is intended to be a **CONSTRUCTIVE PETITION FOR**

EXTENSION OF TIME in accordance with 37 C.F.R. § 1.136(a)(3).

Respectfully submitted,

NIXON PEABODY LLP

Date: March 15, 2010

Information:

This Acknowledgement Receipt evidences receipt on the noted date by the USPTO of the indicated documents, characterized by the applicant, and including page counts, where applicable. It serves as evidence of receipt similar to a Post Card, as described in MPEP 503.

New Applications Under 35 U.S.C. 111

If a new application is being filed and the application includes the necessary components for a filing date (see 37 CFR 1.53(b)-(d) and MPEP 506), a Filing Receipt (37 CFR 1.54) will be issued in due course and the date shown on this Acknowledgement Receipt will establish the filing date of the application.

National Stage of an International Application under 35 U.S.C. 371

If a timely submission to enter the national stage of an international application is compliant with the conditions of 35 U.S.C. 371 and other applicable requirements a Form PCT/DO/EO/903 indicating acceptance of the application as a national stage submission under 35 U.S.C. 371 will be issued in addition to the Filing Receipt, in due course.

New International Application Filed with the USPTO as a Receiving Office

If a new international application is being filed and the international application includes the necessary components for an international filing date (see PCT Article 11 and MPEP 1810), a Notification of the International Application Number and of the International Filing Date (Form PCT/RO/105) will be issued in due course, subject to prescriptions concerning national security, and the date shown on this Acknowledgement Receipt will establish the international filing date of the application.

Amendments to the Claims:

1. (Currently Amended) A computer-implemented method for transferring rights adapted to be associated with items from a rights supplier to a rights consumer, the method comprising:

obtaining a set of rights associated with an item, the set of rights including <u>a</u> meta-right[[s]] specifying derivable rights that can be derived from the meta-rights <u>a</u> right that can be <u>created when the meta-right is exercised</u>, wherein the <u>meta-right is meta-rights are</u> provided in digital form and [[are]] <u>is</u> enforceable by a repository;

determining, by a repository, whether the rights consumer is entitled to the derivable right[[s]] specified by the meta-right[[s]]; and

deriving at least one right from the derivable rights, exercising the meta-right to create the right specified by the meta-right if the rights consumer is entitled to the derivable right[[s]] specified by the meta-right[[s]], wherein the derived created right includes at least one state variable based on the set of rights and used for determining a state of the derived created right.

- 2. (Original) The method of claim 1, wherein the state variable inherits a state thereof for content usage or rights transfer from the set of rights.
- 3. (Original) The method of claim 1, wherein the state variable shares a state thereof for content usage or rights transfer with the set of rights.
- 4. (Original) The method of claim 1, wherein the state variable inherits a remaining state for content usage or rights transfer from the set of rights.
- 5. (Original) The method of claim 1, wherein the state variable is updated upon exercise of a right associated with the state variable.

Application No. 10/956,121 Attorney Docket No. 111325-291300

Page 3 of 9

6. (Currently Amended) The method of claim 1, further comprising deriving a plurality of rights from the derivable rights, wherein exercising the meta-right creates a plurality of rights, wherein the state variable is shared by the derived created rights.

- 7. (Original) The method of claim 1, wherein the state variable represents a collection of states.
- 8. (Currently Amended) The method of claim 1, further comprising a plurality of state variables that determine the state of the <u>derived created</u> right.
- 9. (Currently Amended) The method of claim 1, wherein the at least one state variable is unspecified in the <u>derived created</u> right, is created during a rights transfer, and is assigned to the <u>derived created</u> right.
- 10. (Currently Amended) The method of claim 1, wherein the state variable is transferred from the derivable rights right specified by the meta-right to the derived created right.
- 11. (Currently Amended) The method of claim 1, further comprising generating a license including the <u>derived created</u> right, if the rights consumer is entitled to the <u>derivable</u> right specified by the meta-right[[s]].
- 12. (Currently Amended) A system for transferring rights adapted to be associated with items from a rights supplier to a rights consumer, the system comprising:

means for obtaining a set of rights associated with an item, the set of rights including a meta-right[[s]] specifying derivable rights that can be derived from the meta-rights a right that can be created when the meta-right is exercised, wherein the meta-right is meta-rights are provided in digital form and [[are]] is enforceable by a repository;

means for determining whether the rights consumer is entitled to the derivable right[[s]] specified by the meta-right[[s]]; and

means for deriving at least one right from the derivable rights, means for exercising the meta-right to create the right specified by the meta-right if the rights consumer is entitled to the derivable right[[s]] specified by the meta-right[[s]], wherein the derived created right includes at least one state variable based on the set of rights and used for determining a state of the derived created right.

- 13. (Original) The system of claim 12, wherein the state variable inherits a state thereof for content usage or rights transfer from the set of rights.
- 14. (Original) The system of claim 12, wherein the state variable shares a state thereof for content usage or rights transfer with the set of rights.
- 15. (Original) The system of claim 12, wherein the state variable inherits a remaining state for content usage or rights transfer from the set of rights.
- 16. (Original) The system of claim 12, wherein the state variable is updated upon exercise of a right associated with the state variable.
- 17. (Currently Amended) The system of claim 12, further comprising means for deriving a plurality of rights from the derivable rights, wherein exercising the meta-right results creates a plurality of rights, wherein the state variable is shared by the derived created rights.
- 18. (Original) The system of claim 12, wherein the state variable represents a collection of states.
- 19. (Currently Amended) The system of claim 12, including a plurality of state variables that determine the state of the derived created right.

- 20. (Currently Amended) The system of claim 12, wherein the at least one state variable is unspecified in the <u>derived created</u> right, is created during a rights transfer, and is assigned to the <u>derived created</u> right.
- 21. (Currently Amended) The system of claim 12, wherein the state variable is transferred from the derivable rights right specified by the meta-right to the derived created right.
- 22. (Currently Amended) The system of claim 12, further comprising means for generating a license including the <u>derived created</u> right, if the rights consumer is entitled to the <u>derivable rights right specified</u> by the meta-right[[s]].
- 23. (Currently Amended) The system of claim 12, wherein the means for obtaining, the means for determining, and the means for deriving exercising comprise at least one of computer-executable instructions, and devices of a computer system.
- 24. (Currently Amended) A device for transferring rights adapted to be associated with items from a rights supplier to a rights consumer, the device comprising:

means for obtaining a set of rights associated with an item, the set of rights including <u>a</u> meta-right[[s]] specifying derivable rights that can be derived from the meta-rights <u>a right that</u> can be created when the meta-right is exercised, wherein the <u>meta-right is meta-rights are</u> provided in digital form and [[are]] <u>is</u> enforceable by a repository;

means for determining whether the rights consumer is entitled to the derivable right[[s]] specified by the meta-right[[s]]; and

means for deriving at least one right from the derivable rights, means for exercising the meta-right to create the right specified by the meta-right if the rights consumer is entitled to the derivable right[[s]] specified by the meta-right[[s]], wherein the derived created right includes at least one state variable based on the set of rights and used for determining a state of the derived created right.

- 25. (Original) The device of claim 24, wherein the state variable inherits a state thereof for content usage or rights transfer from the set of rights.
- 26. (Original) The device of claim 24, wherein the state variable shares a state thereof for content usage or rights transfer with the set of rights.
- 27. (Original) The device of claim 24, wherein the state variable inherits a remaining state for content usage or rights transfer from the set of rights.
- 28. (Original) The device of claim 24, wherein the state variable is updated upon exercise of a right associated with the state variable.
- 29. (Currently Amended) The device of claim 24, further comprising means for deriving a plurality of rights from the derivable rights, wherein exercising the meta-right results creates a plurality of rights, wherein the state variable is shared by the derived created rights.
- 30. (Original) The device of claim 24, wherein the state variable represents a collection of states.
- 31. (Currently Amended) The device of claim 24, including a plurality of state variables that determine the state of the <u>derived</u> <u>created</u> right.
- 32. (Currently Amended) The device of claim 24, wherein the at least one state variable is unspecified in the <u>derived created right</u>, is created during a rights transfer, and is assigned to the <u>derived created right</u>.
- 33. (Currently Amended) The device of claim 24, wherein the state variable is transferred from the derivable rights right specified by the meta-right to the derived created right.

Application No. 10/956,121 Attorney Docket No. 111325-291300 Page 7 of 9

- 34. (Currently Amended) The device of claim 24, further comprising means for generating a license including the <u>derived created</u> right, if the rights consumer is entitled to the <u>derivable rights right</u> specified by the meta-right[[s]].
- 35. (Currently Amended) The device of claim 24, wherein the means for obtaining, the means for determining, and the means for deriving exercising comprise at least one of computer-executable instructions, and devices of a computer system.
- 36. (Currently Amended) The device of claim 24, wherein one or more of the means for obtaining, the means for determining, and the means for deriving exercising are specified in a license.

This collection of information is required by 37 CFR 1.16. The information is required to obtain or retain a benefit by the public which is to file (and by the USPTO to process) an application. Confidentiality is governed by 35 U.S.C. 122 and 37 CFR 1.14. This collection is estimated to take 12 minutes to complete, including gathering, preparing, and submitting the completed application form to the USPTO. Time will vary depending upon the individual case. Any comments on the amount of time you require to complete this form and/or suggestions for reducing this burden, should be sent to the Chief Information Officer, U.S. Patent and Trademark Office, U.S. Department of Commerce, P.O. Box 1450, Alexandria, VA 22313-1450. DO NOT SEND FEES OR COMPLETED FORMS TO THIS ADDRESS. SEND TO: Commissioner for Patents, P.O. Box 1450, Alexandria, VA 22313-1450.

If you need assistance in completing the form, call 1-800-PTO-9199 and select option 2

TITLE OF INVENTION: SYSTEM AND METHOD FOR MANAGING TRANSFER OF RIGHTS USING SHARED STATE VARIABLES

APPLN. TYPE	SMALL ENTITY	ISSUE FEE DUE	PUBLICATION FEE DUE	PREV. PAID ISSUE FEE	TOTAL FEE(S) DUE	DATE DUE
nonprovisional	NO	\$1510	\$300	\$0	\$1810	06/29/2010

THE APPLICATION IDENTIFIED ABOVE HAS BEEN EXAMINED AND IS ALLOWED FOR ISSUANCE AS A PATENT. PROSECUTION ON THE MERITS IS CLOSED. THIS NOTICE OF ALLOWANCE IS NOT A GRANT OF PATENT RIGHTS. THIS APPLICATION IS SUBJECT TO WITHDRAWAL FROM ISSUE AT THE INITIATIVE OF THE OFFICE OR UPON PETITION BY THE APPLICANT. SEE 37 CFR 1.313 AND MPEP 1308.

THE ISSUE FEE AND PUBLICATION FEE (IF REQUIRED) MUST BE PAID WITHIN THREE MONTHS FROM THE MAILING DATE OF THIS NOTICE OR THIS APPLICATION SHALL BE REGARDED AS ABANDONED. THIS STATUTORY PERIOD CANNOT BE EXTENDED. SEE 35 U.S.C. 151. THE ISSUE FEE DUE INDICATED ABOVE DOES NOT REFLECT A CREDIT FOR ANY PREVIOUSLY PAID ISSUE FEE IN THIS APPLICATION. IF AN ISSUE FEE HAS PREVIOUSLY BEEN PAID IN THIS APPLICATION (AS SHOWN ABOVE), THE RETURN OF PART B OF THIS FORM WILL BE CONSIDERED A REQUEST TO REAPPLY THE PREVIOUSLY PAID ISSUE FEE TOWARD THE ISSUE FEE NOW DUE.

HOW TO REPLY TO THIS NOTICE:

I. Review the SMALL ENTITY status shown above.

If the SMALL ENTITY is shown as YES, verify your current SMALL ENTITY status:

A. If the status is the same, pay the TOTAL FEE(S) DUE shown above.

B. If the status above is to be removed, check box 5b on Part B - Fee(s) Transmittal and pay the PUBLICATION FEE (if required) and twice the amount of the ISSUE FEE shown above, or

If the SMALL ENTITY is shown as NO:

A. Pay TOTAL FEE(S) DUE shown above, or

B. If applicant claimed SMALL ENTITY status before, or is now claiming SMALL ENTITY status, check box 5a on Part B - Fee(s) Transmittal and pay the PUBLICATION FEE (if required) and 1/2 the ISSUE FEE shown above.

II. PART B - FEE(S) TRANSMITTAL, or its equivalent, must be completed and returned to the United States Patent and Trademark Office (USPTO) with your ISSUE FEE and PUBLICATION FEE (if required). If you are charging the fee(s) to your deposit account, section "4b" of Part B - Fee(s) Transmittal should be completed and an extra copy of the form should be submitted. If an equivalent of Part B is filed, a request to reapply a previously paid issue fee must be clearly made, and delays in processing may occur due to the difficulty in recognizing the paper as an equivalent of Part B.

III. All communications regarding this application must give the application number. Please direct all communications prior to issuance to Mail Stop ISSUE FEE unless advised to the contrary.

IMPORTANT REMINDER: Utility patents issuing on applications filed on or after Dec. 12, 1980 may require payment of maintenance fees. It is patentee's responsibility to ensure timely payment of maintenance fees when due.

PART B - FEE(S) TRANSMITTAL

Complete and send this form, together with applicable fee(s), to: Mail Mail Stop ISSUE FEE

Commissioner for Patents P.O. Box 1450

Alexandria, Virginia 22313-1450 (571)-273-2885

INSTRUCTIONS: This form should be used for transmitting the ISSUE FEE and PUBLICATION FEE (if required). Blocks 1 through 5 should be completed where appropriate. All further correspondence including the Patent, advance orders and notification of maintenance fees will be mailed to the current correspondence address as indicated unless corrected below or directed otherwise in Block 1, by (a) specifying a new correspondence address; and/or (b) indicating a separate "FEE ADDRESS" for

or <u>Fax</u>

maintenance fee notifications. Note: A certificate of mailing can only be used for domestic mailings of the CURRENT CORRESPONDENCE ADDRESS (Note: Use Block 1 for any change of address) Fee(s) Transmittal. This certificate cannot be used for any other accompanying papers. Each additional paper, such as an assignment or formal drawing, must have its own certificate of mailing or transmission. 22204 7590 03/29/2010 Certificate of Mailing or Transmission NIXON PEABODY, LLP I hereby certify that this Fee(s) Transmittal is being deposited with the United States Postal Service with sufficient postage for first class mail in an envelope addressed to the Mail Stop ISSUE FEE address above, or being facsimile transmitted to the USPTO (571) 273-2885, on the date indicated below. 401 9TH STREET, NW SUITE 900 WASHINGTON, DC 20004-2128 (Depositor's name (Signature (Date APPLICATION NO. Determination of Patent Term Adjustment under 35 U.S.C. 154 (b)

(application filed on or after May 29, 2000)

The Patent Term Adjustment to date is 682 day(s). If the issue fee is paid on the date that is three months after the mailing date of this notice and the patent issues on the Tuesday before the date that is 28 weeks (six and a half months) after the mailing date of this notice, the Patent Term Adjustment will be 682 day(s).

If a Continued Prosecution Application (CPA) was filed in the above-identified application, the filing date that determines Patent Term Adjustment is the filing date of the most recent CPA.

Applicant will be able to obtain more detailed information by accessing the Patent Application Information Retrieval (PAIR) WEB site (http://pair.uspto.gov).

Any questions regarding the Patent Term Extension or Adjustment determination should be directed to the Office of Patent Legal Administration at (571)-272-7702. Questions relating to issue and publication fee payments should be directed to the Customer Service Center of the Office of Patent Publication at 1-(888)-786-0101 or (571)-272-4200.

REASONS FOR ALLOWANCE

Acknowledgements

Applicants' amendment filed 22 December 2009 is acknowledged. Accordingly, claims
 1-36 remain pending.

- 2. The following is an Examiner's statement of reasons for allowance:
- 3. Regarding the claimed terms, the Examiner notes that a "general term must be understood in the context in which the inventor presents it." *In re Glaug* 283 F.3d 1335, 1340, 62 USPQ2d 1151, 1154 (Fed. Cir. 2002). Therefore the Examiner must interpret the claimed terms as found on pages 1-24 of the specification. Clearly almost all the general terms in the claims may have multiple meanings. So where a claim term "is susceptible to various meanings, . . . the inventor's lexicography must prevail" *Id.* Using these definitions for the claims, the claimed invention was not reasonably found in the prior art.
- 4. The primary reference Anand (U.S. 6,044,466) discloses as previously discussed. Anand however does not teach at least "a meta-right specifying a right that can be created when the meta-right is exercised." Moreover, the missing claimed elements from Anand are not found in a reasonable number of references. Yet even if the missing claimed elements were found in a reasonable number of references, a person of ordinary skill in the art at the time the invention was made would *not* have been motivated to include these missing elements in an embodiment in the Anand disclosure because there is no motivation to create a meta-right when the meta-right is exercised.
- 5. Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue

Application/Control Number: 10/956,121 Page 3

Art Unit: 3621

fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for

Allowance."

Conclusion

Any inquiry concerning this communication or earlier communications from the

examiner should be directed to Thomas West whose telephone number is 571-270-1236. The

examiner can normally be reached on Tuesday and Wednesday 7:30am - 5pm EST.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's

supervisor, Andrew Fischer can be reached on 571-272-6779. The fax phone number for the

organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent

Application Information Retrieval (PAIR) system. Status information for published applications

may be obtained from either Private PAIR or Public PAIR. Status information for unpublished

applications is available through Private PAIR only. For more information about the PAIR

system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR

system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free). If you would

like assistance from a USPTO Customer Service Representative or access to the automated

information system, call 800-786-9199 (IN USA OR CANADA) or 571-272-1000.

22204 NIXON PEABODY, LLP 401 9TH STREET, NW SUITE 900 WASHINGTON, DC 20004-2128 CONFIRMATION NO. 8924 CORRECTED FILING RECEIPT

Date Mailed: 05/26/2010

Receipt is acknowledged of this non-provisional patent application. The application will be taken up for examination in due course. Applicant will be notified as to the results of the examination. Any correspondence concerning the application must include the following identification information: the U.S. APPLICATION NUMBER, FILING DATE, NAME OF APPLICANT, and TITLE OF INVENTION. Fees transmitted by check or draft are subject to collection. Please verify the accuracy of the data presented on this receipt. If an error is noted on this Filing Receipt, please submit a written request for a Filing Receipt Correction. Please provide a copy of this Filing Receipt with the changes noted thereon. If you received a "Notice to File Missing Parts" for this application, please submit any corrections to this Filing Receipt with your reply to the Notice. When the USPTO processes the reply to the Notice, the USPTO will generate another Filing Receipt incorporating the requested corrections

Title

SYSTEM AND METHOD FOR MANAGING TRANSFER OF RIGHTS USING SHARED STATE VARIABLES

Preliminary Class

705

PROTECTING YOUR INVENTION OUTSIDE THE UNITED STATES

Since the rights granted by a U.S. patent extend only throughout the territory of the United States and have no effect in a foreign country, an inventor who wishes patent protection in another country must apply for a patent in a specific country or in regional patent offices. Applicants may wish to consider the filing of an international application under the Patent Cooperation Treaty (PCT). An international (PCT) application generally has the same effect as a regular national patent application in each PCT-member country. The PCT process **simplifies** the filing of patent applications on the same invention in member countries, but **does not result** in a grant of "an international patent" and does not eliminate the need of applicants to file additional documents and fees in countries where patent protection is desired.

Almost every country has its own patent law, and a person desiring a patent in a particular country must make an application for patent in that country in accordance with its particular laws. Since the laws of many countries differ in various respects from the patent law of the United States, applicants are advised to seek guidance from specific foreign countries to ensure that patent rights are not lost prematurely.

Applicants also are advised that in the case of inventions made in the United States, the Director of the USPTO must issue a license before applicants can apply for a patent in a foreign country. The filing of a U.S. patent application serves as a request for a foreign filing license. The application's filing receipt contains further information and guidance as to the status of applicant's license for foreign filing.

Applicants may wish to consult the USPTO booklet, "General Information Concerning Patents" (specifically, the section entitled "Treaties and Foreign Patents") for more information on timeframes and deadlines for filing foreign patent applications. The guide is available either by contacting the USPTO Contact Center at 800-786-9199, or it can be viewed on the USPTO website at http://www.uspto.gov/web/offices/pac/doc/general/index.html.

For information on preventing theft of your intellectual property (patents, trademarks and copyrights), you may wish to consult the U.S. Government website, http://www.stopfakes.gov. Part of a Department of Commerce initiative, this website includes self-help "toolkits" giving innovators guidance on how to protect intellectual property in specific countries such as China, Korea and Mexico. For questions regarding patent enforcement issues, applicants may call the U.S. Government hotline at 1-866-999-HALT (1-866-999-4158).

LICENSE FOR FOREIGN FILING UNDER Title 35, United States Code, Section 184 Title 37, Code of Federal Regulations, 5.11 & 5.15

GRANTED

The applicant has been granted a license under 35 U.S.C. 184, if the phrase "IF REQUIRED, FOREIGN FILING LICENSE GRANTED" followed by a date appears on this form. Such licenses are issued in all applications where

the conditions for issuance of a license have been met, regardless of whether or not a license may be required as set forth in 37 CFR 5.15. The scope and limitations of this license are set forth in 37 CFR 5.15(a) unless an earlier license has been issued under 37 CFR 5.15(b). The license is subject to revocation upon written notification. The date indicated is the effective date of the license, unless an earlier license of similar scope has been granted under 37 CFR 5.13 or 5.14.

This license is to be retained by the licensee and may be used at any time on or after the effective date thereof unless it is revoked. This license is automatically transferred to any related applications(s) filed under 37 CFR 1.53(d). This license is not retroactive.

The grant of a license does not in any way lessen the responsibility of a licensee for the security of the subject matter as imposed by any Government contract or the provisions of existing laws relating to espionage and the national security or the export of technical data. Licensees should apprise themselves of current regulations especially with respect to certain countries, of other agencies, particularly the Office of Defense Trade Controls, Department of State (with respect to Arms, Munitions and Implements of War (22 CFR 121-128)); the Bureau of Industry and Security, Department of Commerce (15 CFR parts 730-774); the Office of Foreign AssetsControl, Department of Treasury (31 CFR Parts 500+) and the Department of Energy.

NOT GRANTED

No license under 35 U.S.C. 184 has been granted at this time, if the phrase "IF REQUIRED, FOREIGN FILING LICENSE GRANTED" DOES NOT appear on this form. Applicant may still petition for a license under 37 CFR 5.12, if a license is desired before the expiration of 6 months from the filing date of the application. If 6 months has lapsed from the filing date of this application and the licensee has not received any indication of a secrecy order under 35 U.S.C. 181, the licensee may foreign file the application pursuant to 37 CFR 5.15(b).

This Acknowledgement Receipt evidences receipt on the noted date by the USPTO of the indicated documents, characterized by the applicant, and including page counts, where applicable. It serves as evidence of receipt similar to a Post Card, as described in MPEP 503.

New Applications Under 35 U.S.C. 111

If a new application is being filed and the application includes the necessary components for a filing date (see 37 CFR 1.53(b)-(d) and MPEP 506), a Filing Receipt (37 CFR 1.54) will be issued in due course and the date shown on this Acknowledgement Receipt will establish the filing date of the application.

National Stage of an International Application under 35 U.S.C. 371

If a timely submission to enter the national stage of an international application is compliant with the conditions of 35 U.S.C. 371 and other applicable requirements a Form PCT/DO/EO/903 indicating acceptance of the application as a national stage submission under 35 U.S.C. 371 will be issued in addition to the Filing Receipt, in due course.

New International Application Filed with the USPTO as a Receiving Office

If a new international application is being filed and the international application includes the necessary components for an international filing date (see PCT Article 11 and MPEP 1810), a Notification of the International Application Number and of the International Filing Date (Form PCT/RO/105) will be issued in due course, subject to prescriptions concerning national security, and the date shown on this Acknowledgement Receipt will establish the international filing date of the application.

Determination of Patent Term Adjustment under 35 U.S.C. 154 (b)

(application filed on or after May 29, 2000)

The Patent Term Adjustment is 1529 day(s). Any patent to issue from the above-identified application will include an indication of the adjustment on the front page.

If a Continued Prosecution Application (CPA) was filed in the above-identified application, the filing date that determines Patent Term Adjustment is the filing date of the most recent CPA.

Applicant will be able to obtain more detailed information by accessing the Patent Application Information Retrieval (PAIR) WEB site (http://pair.uspto.gov).

Any questions regarding the Patent Term Extension or Adjustment determination should be directed to the Office of Patent Legal Administration at (571)-272-7702. Questions relating to issue and publication fee payments should be directed to the Application Assistance Unit (AAU) of the Office of Data Management (ODM) at (571)-272-4200.

APPLICANT(s) (Please see PAIR WEB site http://pair.uspto.gov for additional applicants):

Mai Nguyen, Buena Park, CA; Xin Wang, Torrance, CA; Thanh Ta, Huntington Beach, CA; Guillermo Lao, Torrance, CA; Eddie J. Chen, Rancho Palos Verdes, CA; Under the Paperwork Reduction Act of 1996, no persons are impliced to respond to a collection of information unless it displays a valid OMB control number.

This collection of information is required by 37 CFR 1.31, 1.32 and 1.33. The information is required to obtain or retain a benefit by the public which is to file (and by the USPTC) to process) an application. Confidentially is governed by U.S.C. 122 and 37 CFR 1.11 and 1.14. This collection is estimated to take 3 minutes to complete, including gathering, preparing, and submitting the completed application form to the USPTC. Time will very depending upon the individual case. Any comments on the amount of time you require to complete this form and/or suggestions for reducing this burden, should be sent to the Chief Information Officer.
U.S. Faterit and Trademerk Office, U.S. Department of Commence, P.O. Box 1459, Alexandria, VA 22313-1450. GO NOT SEND FEES OR COMPLETED FORMS TO THIS ADDRESS. SEND TO: Commissioner for Patents, P.O. Box 1459, Alexandria, VA 22313-1459.

If you need assistance in completing the form, call 1-800-PTO-9199 and select option 2.

Privacy Act Statement

The **Privacy Act of 1974 (P.L. 92-579)** requires that you be given certain information in connection with your submission of the attached form related to a patent application or patent. Accordingly, pursuant to the requirements of the Act, please be advised that: (1) the general authority for the collection of this information is 35 U.S.C. 2(b)(2); (2) furnishing of the information solicited is voluntary; and (3) the principal purpose for which the information is used by the U.S. Patent and Trademark Office is to process and/or examine your submission related to a patent application or patent. If you do not furnish the requested information, the U.S. Patent and Trademark Office may not be able to process and/or examine your submission, which may result in termination of proceedings or abandonment of the application or expiration of the patent.

The information provided by you in this form will be subject to the following routine uses:

- The information on this form will be treated confidentially to the extent allowed under the
 Freedom of Information Act (5 U.S.C. 552) and the Privacy Act (5 U.S.C 552a). Records from
 this system of records may be disclosed to the Department of Justice to determine whether
 disclosure of these records is required by the Freedom of Information Act.
- A record from this system of records may be disclosed, as a routine use, in the course of
 presenting evidence to a court, magistrate, or administrative tribunal, including disclosures to
 opposing counsel in the course of settlement negotiations.
- A record in this system of records may be disclosed, as a routine use, to a Member of Congress submitting a request involving an individual, to whom the record pertains, when the individual has requested assistance from the Member with respect to the subject matter of the record.
- 4. A record in this system of records may be disclosed, as a routine use, to a contractor of the Agency having need for the information in order to perform a contract. Recipients of information shall be required to comply with the requirements of the Privacy Act of 1974, as amended, pursuant to 5 U.S.C. 552a(m).
- A record related to an international Application filed under the Patent Cooperation Treaty in this system of records may be disclosed, as a routine use, to the International Bureau of the World Intellectual Property Organization, pursuant to the Patent Cooperation Treaty.
- A record in this system of records may be disclosed, as a routine use, to another federal agency for purposes of National Security review (35 U.S.C. 181) and for review pursuant to the Atomic Energy Act (42 U.S.C. 218(c)).
- 7. A record from this system of records may be disclosed, as a routine use, to the Administrator, General Services, or his/her designee, during an inspection of records conducted by GSA as part of that agency's responsibility to recommend improvements in records management practices and programs, under authority of 44 U.S.C. 2904 and 2906. Such disclosure shall be made in accordance with the GSA regulations governing inspection of records for this purpose, and any other relevant (i.e., GSA or Commerce) directive. Such disclosure shall not be used to make determinations about individuals.
- 8. A record from this system of records may be disclosed, as a routine use, to the public after either publication of the application pursuant to 35 U.S.C. 122(b) or issuance of a patent pursuant to 35 U.S.C. 161. Further, a record may be disclosed, subject to the limitations of 37 CFR 1.14, as a routine use, to the public if the record was filed in an application which became abandoned or in which the proceedings were terminated and which application is referenced by either a published application, an application open to public inspection or an issued patent.
- A record from this system of records may be disclosed, as a routine use, to a Federal, State, or local law enforcement agency, if the USPTO becomes aware of a violation or potential violation of law or regulation.

This Acknowledgement Receipt evidences receipt on the noted date by the USPTO of the indicated documents, characterized by the applicant, and including page counts, where applicable. It serves as evidence of receipt similar to a Post Card, as described in MPEP 503.

New Applications Under 35 U.S.C. 111

If a new application is being filed and the application includes the necessary components for a filing date (see 37 CFR 1.53(b)-(d) and MPEP 506), a Filing Receipt (37 CFR 1.54) will be issued in due course and the date shown on this Acknowledgement Receipt will establish the filing date of the application.

National Stage of an International Application under 35 U.S.C. 371

If a timely submission to enter the national stage of an international application is compliant with the conditions of 35 U.S.C. 371 and other applicable requirements a Form PCT/DO/EO/903 indicating acceptance of the application as a national stage submission under 35 U.S.C. 371 will be issued in addition to the Filing Receipt, in due course.

New International Application Filed with the USPTO as a Receiving Office

If a new international application is being filed and the international application includes the necessary components for an international filing date (see PCT Article 11 and MPEP 1810), a Notification of the International Application Number and of the International Filing Date (Form PCT/RO/105) will be issued in due course, subject to prescriptions concerning national security, and the date shown on this Acknowledgement Receipt will establish the international filing date of the application.

AUTHORIZATION TO ACT ON BEHALF OF THE ASSIGNEE

UNDER 37 CFR 3.73(b)(2)(i)

Commissioner for Patents P.O. Box 1450 Alexandria, VA 22313-1450

Sir:

The practitioners associated with Customer Number 98804 have been authorized (or empowered) to act on behalf of ContentGuard Holdings, Inc. before the United States Patent and Trademark Office (i.e. to sign the enclosed submission on behalf of the assignee), pursuant to 37 CFR 3.73(b)(2)(i).

If any additional information is required in this regard, please contact the undersigned as soon as possible.

Respectfully submitted,

Date: September 16, 2010

/Stephen M. Hertzler, Reg. No. 58,247/ Stephen M. Hertzler Registration No. 58,247

REED SMITH LLP

CUSTOMER NO.: 98804 1301 K Street N.W. Suite 1100 – East Tower Washington, D.C. 20005 Under the Paperwork Reduction Act of 1995, no persons are required to respond to a collection of information unless it displays a valid OMB control number.

STATEMENT UNDE	ER 37 CFR 3.73(b)
Applicant/Patent Owner: CONTENTGUARD HOLDINGS, INC.	
Application No./Patent No.: 10/956,121	Filed/Issue Date: 10-04-2004
Titled: SYSTEM AND METHOD FOR MANAGING TRANSF	ER OF RIGHTS USING SHARED STATE VARIABLES
CONTENTGUARD HOLDINGS, INC. , a Corpor	ration
	of Assignee, e.g., corporation, partnership, university, government agency, etc.
states that it is:

Privacy Act Statement

The **Privacy Act of 1974 (P.L. 93-579)** requires that you be given certain information in connection with your submission of the attached form related to a patent application or patent. Accordingly, pursuant to the requirements of the Act, please be advised that: (1) the general authority for the collection of this information is 35 U.S.C. 2(b)(2); (2) furnishing of the information solicited is voluntary; and (3) the principal purpose for which the information is used by the U.S. Patent and Trademark Office is to process and/or examine your submission related to a patent application or patent. If you do not furnish the requested information, the U.S. Patent and Trademark Office may not be able to process and/or examine your submission, which may result in termination of proceedings or abandonment of the application or expiration of the patent.

The information provided by you in this form will be subject to the following routine uses:

- 1. The information on this form will be treated confidentially to the extent allowed under the Freedom of Information Act (5 U.S.C. 552) and the Privacy Act (5 U.S.C 552a). Records from this system of records may be disclosed to the Department of Justice to determine whether disclosure of these records is required by the Freedom of Information Act.
- 2. A record from this system of records may be disclosed, as a routine use, in the course of presenting evidence to a court, magistrate, or administrative tribunal, including disclosures to opposing counsel in the course of settlement negotiations.
- 3. A record in this system of records may be disclosed, as a routine use, to a Member of Congress submitting a request involving an individual, to whom the record pertains, when the individual has requested assistance from the Member with respect to the subject matter of the record
- 4. A record in this system of records may be disclosed, as a routine use, to a contractor of the Agency having need for the information in order to perform a contract. Recipients of information shall be required to comply with the requirements of the Privacy Act of 1974, as amended, pursuant to 5 U.S.C. 552a(m).
- 5. A record related to an International Application filed under the Patent Cooperation Treaty in this system of records may be disclosed, as a routine use, to the International Bureau of the World Intellectual Property Organization, pursuant to the Patent Cooperation Treaty.
- 6. A record in this system of records may be disclosed, as a routine use, to another federal agency for purposes of National Security review (35 U.S.C. 181) and for review pursuant to the Atomic Energy Act (42 U.S.C. 218(c)).
- 7. A record from this system of records may be disclosed, as a routine use, to the Administrator, General Services, or his/her designee, during an inspection of records conducted by GSA as part of that agency's responsibility to recommend improvements in records management practices and programs, under authority of 44 U.S.C. 2904 and 2906. Such disclosure shall be made in accordance with the GSA regulations governing inspection of records for this purpose, and any other relevant (i.e., GSA or Commerce) directive. Such disclosure shall not be used to make determinations about individuals.
- 8. A record from this system of records may be disclosed, as a routine use, to the public after either publication of the application pursuant to 35 U.S.C. 122(b) or issuance of a patent pursuant to 35 U.S.C. 151. Further, a record may be disclosed, subject to the limitations of 37 CFR 1.14, as a routine use, to the public if the record was filed in an application which became abandoned or in which the proceedings were terminated and which application is referenced by either a published application, an application open to public inspection or an issued patent.
- 9. A record from this system of records may be disclosed, as a routine use, to a Federal, State, or local law enforcement agency, if the USPTO becomes aware of a violation or potential violation of law or regulation.
