#### **Rights and permission grant for access**

## Inventors: Xin Wang, Bijan Tadayon, Michael Raley, Guillermo Lao, Thomas DeMartini, Charles Gilliam and Eddie Chen.

U.S. patents 5,629,980, 5,634,012, 5,638,443, and 5,715,403, filed in November 23, 1994, the disclosures of which are incorporated herein by reference) deal with the rights associated with the digital content. These will be the basis of our systems and methods described below.

However, the concept of rights and permission for access can be extended (generalized) to cover all tangible items (such as a lamp, a car, etc.), nontangible or non-physical items (such as a digital work (for example, music, text files, books, reports, video, multimedia, pictures, or any combination of those)), services, goods, purchase orders, procedures, exchanges, and futures commodities. (The concept of having rights and conditions associated with digital content can be applied to things other than digital content – in other words, rights and conditions can be associated with any physical or non-physical thing or service for which its use, access or execution is to be controlled or monitored in some fashion.)

Furthermore, the same grammar that associates permission for access to items can serve as the authentication mechanism (certificate) for a principal. The

principal may be a human being or a physical entity. The certificate may prescribe the social status such as a job function or grade/ranking in an organization, or the function/services provided by a physical entity.

To ensure the integrity of the rights expression (license or certificate) expressed by the grammar, cryptographic technologies such as digital signature and encryption may be applied to either the parts or the entire license or certificate. When applying the cryptographic technologies, the grammar guarantees that any semantically significant parts of the rights expression can be protected against tamper. When the rights expression is issued by multiple issuers, the grammar insures the integrity of the rights expression on behalf of all the issuers.

This includes stock (or other markets) exchange, for example, buying or selling in advance or at a threshold. (Rights and conditions that are associated with execution orders for buying or selling stocks.) For example, the customer can obtain the right to buy 1000 shares of stock of a specific company at a fixed price, between two thresholds, at a specified future time, with a margin call, change the type of stock (common/ preferred), or converting stock options to regular stocks. There may be rights associated with the stocks during the bankruptcy proceedings, as to who can cash out first.

For real estate, the owner's right on the property can be expressed as, for example, joint-tenant or tenant-in-common, with the option to convert to other

options, with the change of the percentage of the ownerships, and designation of the survivorship option.

For professional services, one can buy the right to visit the dentists' office in an association for a period of 1 year, while paying only a fixed or variable copayment for each visit, up to a maximum amount. Or, use the right to consult a lawyer or an accountant for a period of time, fixed number of times, or regarding a specific project or account.

One can buy the right for services offered by an organization, in advance, including the rights associated with the intellectual properties, such as patents, copyright, and trademarks. This can apply to software programmers, customer service, training outfits, or other technical services.

One can obtain a right and later sell that right to a third-party, if such transfers are authorized. This gives mobility and liquidity to different kind of assets, make it possible to expand the regular stock market to include rights to other nonphysical items or services. More money can exchange hands, and the economy can benefit from that. The exchange of rights and auctioning rights have been described in some of our previous disclosures in more details.

# Explore Litigation Insights

Docket Alarm provides insights to develop a more informed litigation strategy and the peace of mind of knowing you're on top of things.

## **Real-Time Litigation Alerts**

Keep your litigation team up-to-date with **real-time alerts** and advanced team management tools built for the enterprise, all while greatly reducing PACER spend.

Our comprehensive service means we can handle Federal, State, and Administrative courts across the country.

### **Advanced Docket Research**

With over 230 million records, Docket Alarm's cloud-native docket research platform finds what other services can't. Coverage includes Federal, State, plus PTAB, TTAB, ITC and NLRB decisions, all in one place.

Identify arguments that have been successful in the past with full text, pinpoint searching. Link to case law cited within any court document via Fastcase.

# **Analytics At Your Fingertips**

Learn what happened the last time a particular judge, opposing counsel or company faced cases similar to yours.

Advanced out-of-the-box PTAB and TTAB analytics are always at your fingertips.

#### API

Docket Alarm offers a powerful API (application programming interface) to developers that want to integrate case filings into their apps.

#### LAW FIRMS

Build custom dashboards for your attorneys and clients with live data direct from the court.

Automate many repetitive legal tasks like conflict checks, document management, and marketing.

#### FINANCIAL INSTITUTIONS

Litigation and bankruptcy checks for companies and debtors.

#### E-DISCOVERY AND LEGAL VENDORS

Sync your system to PACER to automate legal marketing.
