Examiner	:	Beamer, Temica M.
Group Art Unit	:	2617
Conf. No.	:	7158

Commissioner for Patents
P.O. Box 1450
Alexandria, VA 22313-1450

Dear Sir:

This document is being filed with a copy of a Power of Attorney signed by the Assignee. This Statement sets forth the chain of title of the above-identified application.

Premorphic Mobile LP, a Corporation, is the Assignee of the entire right, title, and interest of the above-referenced application by virtue of:

A chain of title, in reverse order, from the inventor(s) to the current Assignee as shown by the following recorded assignments:

1. Assignment from Premorphic Research, Inc. to Premorphic Mobile LP recorded in the United States Patent and Trademark Office on March 25, 2011, at Reel 026022, and Frame 0633.
2. Assignment from Twenty Year Innovations, Inc. to Premorphic Research, Inc. recorded in the United States Patent and Trademark Office on March 18, 2011, at Reel 025982, and Frame 0819.
3. Assignment from Michael E. Shanahan to Twenty Year Innovations, Inc. recorded in the United States Patent and Trademark Office on March 1, 2004, at Reel 015027, and Frame 0049.

The undersigned is an agent of Customer Number 20,995 and is authorized to act on behalf of the Assignee. Please recognize or change the correspondence address for the above-identified application to **Customer No. 20,995.**

**REVOCATION & GENERAL POWER OF ATTORNEY
and
CHANGE IN CORRESPONDENCE ADDRESS**

Commissioner for Patents
P.O. Box 1450
Alexandria, VA 22313-1450

Dear Sir:

The undersigned is an empowered representative of the Assignee and hereby appoints the registrants of Knobbe, Martens, Olson & Bear, LLP, **Customer No. 20,995**, as attorneys and agents to represent the Assignee before the United States Patent and Trademark Office (USPTO) in connection with any and all patent applications assigned to the Assignee according to the USPTO assignment records or assignment documents supplied with an accompanying Statement Under 37 CFR § 3.73(b). This appointment is to be to the exclusion of the inventor(s) and his attorney(s) in accordance with the provisions of 37 CFR § 3.71.

Submission of this paper in connection with any matter of the below named assignee, together with a statement under 37 CFR 3.73(b), shall serve to revoke any previous powers of attorney in that matter.

Attached is a Statement Under 37 CFR § 3.73(b), signed by a registrant of Knobbe, Martens, Olson & Bear, LLP, setting forth a full chain of title for the subject application owned by the Assignee named below.

Please recognize or change the correspondence address for the application identified in the attached Statement to **Customer No. 20,995**.

This Acknowledgement Receipt evidences receipt on the noted date by the USPTO of the indicated documents, characterized by the applicant, and including page counts, where applicable. It serves as evidence of receipt similar to a Post Card, as described in MPEP 503.

New Applications Under 35 U.S.C. 111

If a new application is being filed and the application includes the necessary components for a filing date (see 37 CFR 1.53(b)-(d) and MPEP 506), a Filing Receipt (37 CFR 1.54) will be issued in due course and the date shown on this Acknowledgement Receipt will establish the filing date of the application.

National Stage of an International Application under 35 U.S.C. 371

If a timely submission to enter the national stage of an international application is compliant with the conditions of 35 U.S.C. 371 and other applicable requirements a Form PCT/DO/EO/903 indicating acceptance of the application as a national stage submission under 35 U.S.C. 371 will be issued in addition to the Filing Receipt, in due course.

New International Application Filed with the USPTO as a Receiving Office

If a new international application is being filed and the international application includes the necessary components for an international filing date (see PCT Article 11 and MPEP 1810), a Notification of the International Application Number and of the International Filing Date (Form PCT/RO/105) will be issued in due course, subject to prescriptions concerning national security, and the date shown on this Acknowledgement Receipt will establish the international filing date of the application.

Under the Paperwork Reduction Act of 1995, no persons are required to respond to a collection of information unless it displays a valid OMB control number.

THIRD FLOOR
SAN JOSE, CA 95113

EXAMINER: ELAMIN, ABDELMONIEM I
ART UNIT: 2116 PAPER NUMBER:
DATE MAILED: 08/03/2007

Table with 5 columns: APPLICATION NO., FILING DATE, FIRST NAMED INVENTOR, ATTORNEY DOCKET NO., CONFIRMATION NO.
Values: 11/600,975, 11/17/2006, Bruce Holmer, NVID-P002877, 5311

TITLE OF INVENTION: HIGH QUALITY AND HIGH PERFORMANCE THREE-DIMENSIONAL GRAPHICS ARCHITECTURE FOR PORTABLE HANDHELD DEVICES

Table with 7 columns: APPLN. TYPE, SMALL ENTITY, ISSUE FEE DUE, PUBLICATION FEE DUE, PREV. PAID ISSUE FEE, TOTAL FEE(S) DUE, DATE DUE
Values: nonprovisional, NO, \$1400, \$0, \$0, \$1400, 11/05/2007

THE APPLICATION IDENTIFIED ABOVE HAS BEEN EXAMINED AND IS ALLOWED FOR ISSUANCE AS A PATENT. PROSECUTION ON THE MERITS IS CLOSED. THIS NOTICE OF ALLOWANCE IS NOT A GRANT OF PATENT RIGHTS. THIS APPLICATION IS SUBJECT TO WITHDRAWAL FROM ISSUE AT THE INITIATIVE OF THE OFFICE OR UPON PETITION BY THE APPLICANT. SEE 37 CFR 1.313 AND MPEP 1308.

THE ISSUE FEE AND PUBLICATION FEE (IF REQUIRED) MUST BE PAID WITHIN THREE MONTHS FROM THE MAILING DATE OF THIS NOTICE OR THIS APPLICATION SHALL BE REGARDED AS ABANDONED. THIS STATUTORY PERIOD CANNOT BE EXTENDED. SEE 35 U.S.C. 151. THE ISSUE FEE DUE INDICATED ABOVE DOES NOT REFLECT A CREDIT FOR ANY PREVIOUSLY PAID ISSUE FEE IN THIS APPLICATION. IF AN ISSUE FEE HAS PREVIOUSLY BEEN PAID IN THIS APPLICATION (AS SHOWN ABOVE), THE RETURN OF PART B OF THIS FORM WILL BE CONSIDERED A REQUEST TO REAPPLY THE PREVIOUSLY PAID ISSUE FEE TOWARD THE ISSUE FEE NOW DUE.

HOW TO REPLY TO THIS NOTICE:

I. Review the SMALL ENTITY status shown above.

If the SMALL ENTITY is shown as YES; verify your current SMALL ENTITY status:

- A. If the status is the same, pay the TOTAL FEE(S) DUE shown above.
B. If the status above is to be removed, check box 5b on Part B - Fee(s) Transmittal and pay the PUBLICATION FEE (if required) and twice the amount of the ISSUE FEE shown above, or

If the SMALL ENTITY is shown as NO:

- A. Pay TOTAL FEE(S) DUE shown above, or
B. If applicant claimed SMALL ENTITY status before, or is now claiming SMALL ENTITY status, check box 5a on Part B - Fee(s) Transmittal and pay the PUBLICATION FEE (if required) and 1/2 the ISSUE FEE shown above.

II. PART B - FEE(S) TRANSMITTAL, or its equivalent, must be completed and returned to the United States Patent and Trademark Office (USPTO) with your ISSUE FEE and PUBLICATION FEE (if required). If you are charging the fee(s) to your deposit account, section "4b" of Part B - Fee(s) Transmittal should be completed and an extra copy of the form should be submitted. If an equivalent of Part B is filed, a request to reapply a previously paid issue fee must be clearly made, and delays in processing may occur due to the difficulty in recognizing the paper as an equivalent of Part B.

III. All communications regarding this application must give the application number. Please direct all communications prior to issuance to Mail Stop ISSUE FEE unless advised to the contrary.

IMPORTANT REMINDER: Utility patents issuing on applications filed on or after Dec. 12, 1980 may require payment of maintenance fees. It is patentee's responsibility to ensure timely payment of maintenance fees when due.

PART B - FEE(S) TRANSMITTAL

Complete and send this form, together with applicable fee(s), to: **Mail** Mail Stop ISSUE FEE
Commissioner for Patents
P.O. Box 1450
Alexandria, Virginia 22313-1450
or Fax (571)-273-2885

INSTRUCTIONS: This form should be used for transmitting the ISSUE FEE and PUBLICATION FEE (if required). Blocks 1 through 5 should be completed where appropriate. All further correspondence including the Patent, advance orders and notification of maintenance fees will be mailed to the current correspondence address as indicated unless corrected below or directed otherwise in Block 1, by (a) specifying a new correspondence address; and/or (b) indicating a separate "FEE ADDRESS" for maintenance fee notifications.

CURRENT CORRESPONDENCE ADDRESS (Note: Use Block 1 for any change of address)

Note: A certificate of mailing can only be used for domestic mailings of the Fee(s) Transmittal. This certificate cannot be used for any other accompanying papers. Each additional paper, such as an assignment or formal drawing, must have its own certificate of mailing or transmission.

Determination of Patent Term Adjustment under 35 U.S.C. 154 (b)
(application filed on or after May 29, 2000)

The Patent Term Adjustment to date is 0 day(s). If the issue fee is paid on the date that is three months after the mailing date of this notice and the patent issues on the Tuesday before the date that is 28 weeks (six and a half months) after the mailing date of this notice, the Patent Term Adjustment will be 0 day(s).

If a Continued Prosecution Application (CPA) was filed in the above-identified application, the filing date that determines Patent Term Adjustment is the filing date of the most recent CPA.

Applicant will be able to obtain more detailed information by accessing the Patent Application Information Retrieval (PAIR) WEB site (http://pair.uspto.gov).

Any questions regarding the Patent Term Extension or Adjustment determination should be directed to the Office of Patent Legal Administration at (571)-272-7702. Questions relating to issue and publication fee payments should be directed to the Customer Service Center of the Office of Patent Publication at 1-(888)-786-0101 or (571)-272-4200.

ISSUE NOTIFICATION

The projected patent number and issue date are specified above.

Determination of Patent Term Adjustment under 35 U.S.C. 154 (b) (application filed on or after May 29, 2000)

The Patent Term Adjustment is 247 day(s). Any patent to issue from the above-identified application will include an indication of the adjustment on the front page.

If a Continued Prosecution Application (CPA) was filed in the above-identified application, the filing date that determines Patent Term Adjustment is the filing date of the most recent CPA.

Applicant will be able to obtain more detailed information by accessing the Patent Application Information Retrieval (PAIR) WEB site (<http://pair.uspto.gov>).

Any questions regarding the Patent Term Extension or Adjustment determination should be directed to the Office of Patent Legal Administration at (571)-272-7702. Questions relating to issue and publication fee payments should be directed to the Customer Service Center of the Office of Patent Publication at (571)-272-4200.

APPLICANT(s) (Please see PAIR WEB site <http://pair.uspto.gov> for additional applicants):

Michael E. Shanahan, Nyack, NY;

Complete and send this form, together with applicable fee(s), to: Mail Stop ISSUE FEE Commissioner for Patents P.O. Box 1450 Alexandria, Virginia 22313-1450 or Fax (571)-273-2885

INSTRUCTIONS: This form should be used for transmitting the ISSUE FEE and PUBLICATION FEE (if required). Blocks 1 through 5 should be completed where appropriate. All forms and attachments including the Patent, advance orders and notification of maintenance fees will be mailed to the current correspondence address as indicated unless corrected or directed otherwise in Block 1, by (a) specifying a new correspondence address; and/or (b) indicating a separate "FEE ADDRESS" for maintenance fee notifications.

CURRENT CORRESPONDENCE ADDRESS (Note: Use Block 1 for any change of address)

Note: A certificate of mailing can only be used for domestic mailings of the Fee(s) Transmittal. This certificate cannot be used for any other accompanying papers. Each additional paper, such as an assignment or formal drawing, must have its own certificate of mailing or transmission.

39550 7590 10/23/2006

KALIKO & YEAGER, L.L.C. 500 NORTH FRANKLIN TURNPIKE RAMSEY, NJ 07446

Certificate of Mailing or Transmission

I hereby certify that this Fee(s) Transmittal is being deposited with the United States Postal Service with sufficient postage for first class mail in an envelope addressed to the Mail Stop ISSUE FEE address above, or being facsimile transmitted to the USPTO (571) 273-2885, on the date indicated below.

Form with fields: Depositor's name (Mandy C. Ellis), Signature (Mandy C. Ellis), Date (October 26, 2006)

Table with 5 columns: APPLICATION NO., FILING DATE, FIRST NAMED INVENTOR, ATTORNEY DOCKET NO., CONFIRMATION NO.

TITLE OF INVENTION: METHODS AND APPARATUSES FOR PROGRAMMING USER-DEFINED INFORMATION INTO ELECTRONIC DEVICES

Table with 7 columns: APPLN. TYPE, SMALL ENTITY, ISSUE FEE DUE, PUBLICATION FEE DUE, PREV. PAID ISSUE FEE, TOTAL FEE(S) DUE, DATE DUE

TITLE OF INVENTION: METHODS AND APPARATUSES FOR PROGRAMMING USER-DEFINED INFORMATION INTO ELECTRONIC DEVICES

Table with 7 columns: APPLN. TYPE, SMALL ENTITY, ISSUE FEE DUE, PUBLICATION FEE DUE, PREV. PAID ISSUE FEE, TOTAL FEE(S) DUE, DATE DUE

nonprovisional YES \$700 \$300 \$0 \$1000 01/23/2007

THE APPLICATION IDENTIFIED ABOVE HAS BEEN EXAMINED AND IS ALLOWED FOR ISSUANCE AS A PATENT. PROSECUTION ON THE MERITS IS CLOSED. THIS NOTICE OF ALLOWANCE IS NOT A GRANT OF PATENT RIGHTS. THIS APPLICATION IS SUBJECT TO WITHDRAWAL FROM ISSUE AT THE INITIATIVE OF THE OFFICE OR UPON PETITION BY THE APPLICANT. SEE 37 CFR 1.313 AND MPEP 1308.

THE ISSUE FEE AND PUBLICATION FEE (IF REQUIRED) MUST BE PAID WITHIN THREE MONTHS FROM THE MAILING DATE OF THIS NOTICE OR THIS APPLICATION SHALL BE REGARDED AS ABANDONED. THIS STATUTORY PERIOD CANNOT BE EXTENDED. SEE 35 U.S.C. 151. THE ISSUE FEE DUE INDICATED ABOVE DOES NOT REFLECT A CREDIT FOR ANY PREVIOUSLY PAID ISSUE FEE IN THIS APPLICATION. IF AN ISSUE FEE HAS PREVIOUSLY BEEN PAID IN THIS APPLICATION (AS SHOWN ABOVE), THE RETURN OF PART B OF THIS FORM WILL BE CONSIDERED A REQUEST TO REAPPLY THE PREVIOUSLY PAID ISSUE FEE TOWARD THE ISSUE FEE NOW DUE.

HOW TO REPLY TO THIS NOTICE:

I. Review the SMALL ENTITY status shown above.

If the SMALL ENTITY is shown as YES, verify your current SMALL ENTITY status:

A. If the status is the same, pay the TOTAL FEE(S) DUE shown above.

B. If the status above is to be removed, check box 5b on Part B - Fee(s) Transmittal and pay the PUBLICATION FEE (if required) and twice the amount of the ISSUE FEE shown above, or

If the SMALL ENTITY is shown as NO:

A. Pay TOTAL FEE(S) DUE shown above, or

B. If applicant claimed SMALL ENTITY status before, or is now claiming SMALL ENTITY status, check box 5a on Part B - Fee(s) Transmittal and pay the PUBLICATION FEE (if required) and 1/2 the ISSUE FEE shown above.

II. PART B - FEE(S) TRANSMITTAL, or its equivalent, must be completed and returned to the United States Patent and Trademark Office (USPTO) with your ISSUE FEE and PUBLICATION FEE (if required). If you are charging the fee(s) to your deposit account, section "4b" of Part B - Fee(s) Transmittal should be completed and an extra copy of the form should be submitted. If an equivalent of Part B is filed, a request to reapply a previously paid issue fee must be clearly made, and delays in processing may occur due to the difficulty in recognizing the paper as an equivalent of Part B.

III. All communications regarding this application must give the application number. Please direct all communications prior to issuance to Mail Stop ISSUE FEE unless advised to the contrary.

IMPORTANT REMINDER: Utility patents issuing on applications filed on or after Dec. 12, 1980 may require payment of maintenance fees. It is patentee's responsibility to ensure timely payment of maintenance fees when due.

PART B - FEE(S) TRANSMITTAL

**Complete and send this form, together with applicable fee(s), to: Mail Mail Stop ISSUE FEE
 Commissioner for Patents
 P.O. Box 1450
 Alexandria, Virginia 22313-1450
 or Fax (571)-273-2885**

INSTRUCTIONS: This form should be used for transmitting the ISSUE FEE and PUBLICATION FEE (if required). Blocks 1 through 5 should be completed where appropriate. All further correspondence including the Patent, advance orders and notification of maintenance fees will be mailed to the current correspondence address as indicated unless corrected below or directed otherwise in Block 1, by (a) specifying a new correspondence address; and/or (b) indicating a separate "FEE ADDRESS" for maintenance fee notifications.

CURRENT CORRESPONDENCE ADDRESS (Note: Use Block 1 for any change of address)

Note: A certificate of mailing can only be used for domestic mailings of the Fee(s) Transmittal. This certificate cannot be used for any other accompanying papers. Each additional paper, such as an assignment or formal drawing, must have its own certificate of mailing or transmission.

Determination of Patent Term Adjustment under 35 U.S.C. 154 (b)
(application filed on or after May 29, 2000)

The Patent Term Adjustment to date is 247 day(s). If the issue fee is paid on the date that is three months after the mailing date of this notice and the patent issues on the Tuesday before the date that is 28 weeks (six and a half months) after the mailing date of this notice, the Patent Term Adjustment will be 247 day(s).

If a Continued Prosecution Application (CPA) was filed in the above-identified application, the filing date that determines Patent Term Adjustment is the filing date of the most recent CPA.

Applicant will be able to obtain more detailed information by accessing the Patent Application Information Retrieval (PAIR) WEB site (http://pair.uspto.gov).

Any questions regarding the Patent Term Extension or Adjustment determination should be directed to the Office of Patent Legal Administration at (571)-272-7702. Questions relating to issue and publication fee payments should be directed to the Customer Service Center of the Office of Patent Publication at 1-(888)-786-0101 or (571)-272-4200.

Notice of Allowability

Application No.

10/600,975

Applicant(s)

SHANAHAN, MICHAEL E.

Examiner

Temica M. Beamer

Art Unit

2617

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address--

All claims being allowable, PROSECUTION ON THE MERITS IS (OR REMAINS) CLOSED in this application. If not included herewith (or previously mailed), a Notice of Allowance (PTOL-85) or other appropriate communication will be mailed in due course. **THIS NOTICE OF ALLOWABILITY IS NOT A GRANT OF PATENT RIGHTS.** This application is subject to withdrawal from issue at the initiative of the Office or upon petition by the applicant. See 37 CFR 1.313 and MPEP 1308.

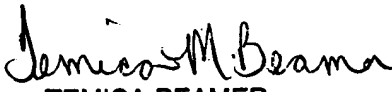

- 1. This communication is responsive to amendment filed 7/21/2006.
 - 2. The allowed claim(s) is/are 2-82 (renumbered as claims 1-8, 15-41, 46-57, 9-14, 42-45 and 58-81).
 - 3. Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
 - a) All b) Some* c) None of the:
 - 1. Certified copies of the priority documents have been received.
 - 2. Certified copies of the priority documents have been received in Application No. _____.
 - 3. Copies of the certified copies of the priority documents have been received in this national stage application from the International Bureau (PCT Rule 17.2(a)).
- * Certified copies not received: _____.

Applicant has THREE MONTHS FROM THE "MAILING DATE" of this communication to file a reply complying with the requirements noted below. Failure to timely comply will result in ABANDONMENT of this application.
THIS THREE-MONTH PERIOD IS NOT EXTENDABLE.

- 4. A SUBSTITUTE OATH OR DECLARATION must be submitted. Note the attached EXAMINER'S AMENDMENT or NOTICE OF INFORMAL PATENT APPLICATION (PTO-152) which gives reason(s) why the oath or declaration is deficient.
 - 5. CORRECTED DRAWINGS (as "replacement sheets") must be submitted.
 - (a) including changes required by the Notice of Draftsperson's Patent Drawing Review (PTO-948) attached
 - 1) hereto or 2) to Paper No./Mail Date _____.
 - (b) including changes required by the attached Examiner's Amendment / Comment or in the Office action of Paper No./Mail Date _____.
- Identifying indicia such as the application number (see 37 CFR 1.84(c)) should be written on the drawings in the front (not the back) of each sheet. Replacement sheet(s) should be labeled as such in the header according to 37 CFR 1.121(d).**
- 6. DEPOSIT OF and/or INFORMATION about the deposit of BIOLOGICAL MATERIAL must be submitted. Note the attached Examiner's comment regarding REQUIREMENT FOR THE DEPOSIT OF BIOLOGICAL MATERIAL.

Attachment(s)

- 1. Notice of References Cited (PTO-892)
- 2. Notice of Draftsperson's Patent Drawing Review (PTO-948)
- 3. Information Disclosure Statements (PTO/SB/08), Paper No./Mail Date _____
- 4. Examiner's Comment Regarding Requirement for Deposit of Biological Material
- 5. Notice of Informal Patent Application
- 6. Interview Summary (PTO-413), Paper No./Mail Date _____
- 7. Examiner's Amendment/Comment
- 8. Examiner's Statement of Reasons for Allowance
- 9. Other _____

INFORMATION DISCLOSURE STATEMENT

Sir:

Pursuant to 37 C.F.R. §§ 1.56, 1.97 and 1.98, applicant hereby makes the documents listed below of record in the above-identified application.

U.S. Patents

Peters Patent No. 5,577,190 November 19, 1996

PATENT
MES/002 CON**Foreign Office Action**

Canadian Office Action dated September 19, 2006 copy included

It is respectfully requested the Examiner fully consider these and any associated documents during the examination of this application, make them of record, and indicate his or her consideration of the documents by initialing the enclosed Citation List adjacent the citation of each document, and print them on any patent that may issue on this application. It is requested that a copy of the initialed Citation form be returned to applicant's undersigned Attorney. Citing of references herein shall not be deemed an admission that such references are prior art. Copies of the cited references are transmitted herewith.

Pursuant to 37 C.F.R. § 1.97 (e)(1) each item of information contained in this Information Disclosure Statement was first cited in a communication from a foreign patent office in a counterpart foreign application not more than three months prior to the filing of this statement. Accordingly, it is believed no fees are due in connection with the filing of this Information Disclosure Statement.

Application No. : 2,436,872
 Owner : TWENTY YEAR INNOVATIONS, INC.
 Title : METHODS AND APPARATUSES FOR PROGRAMMING
 USER-DEFINED INFORMATION INTO ELECTRONIC DEVICES
 Classification : H04M 1/247 (2006.01)
 Your File No. : 50320-T 51170 -16
 Examiner : S.Chhim

YOU ARE HEREBY NOTIFIED OF :

- A REQUISITION BY THE EXAMINER IN ACCORDANCE WITH SUBSECTION 30(2) OF THE PATENT RULES;
- A REQUISITION BY THE EXAMINER IN ACCORDANCE WITH SECTION 29 OF THE PATENT RULES.

IN ORDER TO AVOID MULTIPLE ABANDONMENTS UNDER PARAGRAPH 73(1)(A) OF THE PATENT ACT, A WRITTEN REPLY TO EACH REQUISITION MUST BE RECEIVED WITHIN 6 MONTHS AFTER THE ABOVE DATE.

This application has been examined taking into account applicant's correspondence received in this office on January 22, 2004.

The number of claims in this application is 171.

The examiner has identified the following defects in the application:

The search of the prior art has revealed the following:

Reference Applied:

United States Patent
5,577,190

November 19, 1996 G0F-3/23

Peters

Canada

OPIC CIPO

2,436,872

- 2 -

Peters discloses a media editing system.

Claims 10, 51, 94 and 130 do not comply with section 28.3 of the *Patent Act*. The subject matter of these claims would have been obvious on the claim date to a person skilled in the art or science to which they pertain having regard to Peters.

Claims 10, 51, 94 and 130 are obvious, because Peters teaches a media editing system for editing source material, which comprises a digitizing apparatus for receiving and digitizing video and audio source material, the video source material including a sequence of images, each spanning both the horizontal and vertical display axes of the video source material; computing apparatus including compression apparatus responsive to the digitizing apparatus, the compression apparatus being for compressing the images from the video source material; mass storage responsive to the computing apparatus to receive the compressed video source material, the audio source material, and the information regarding each adjustment; and output apparatus communicating with the computing apparatus for displaying the manipulated source material. Features of claims 10, 51, 94 and 130 are similar to those defined in the specifications of Peters's reference.

Therefore, claims 10, 51, 94 and 130 do not comply with Section 28.3 of the Patent Act.

In view of the foregoing defects, the applicant is requisitioned, under subsection 30(2) of the *Patent Rules*, to amend the application in order to comply with the *Patent Act* and the *Patent Rules* or to provide arguments as to why the application does comply.

Section 29 of the Patent Rules requisition

Under section 29 of the *Patent Rules*, the applicant is requisitioned to provide:

- identification of any prior art cited in respect of the European Patent Office application describing the same invention on behalf of the applicant or on behalf of any other person claiming under an inventor named in the present application, and the patent number, if granted, subsequent to the International Search Report under paragraph 29(1)(a) of the *Patent Rules*.

To satisfy this requisition, applicant should provide all the preceding information or documents, or provide in accordance with subsection 29(3) of the *Patent Rules* a statement of reasons why any information or document is not available or known.

INFORMATION DISCLOSURE STATEMENT

Sir:

Pursuant to 37 C.F.R. §§ 1.56, 1.97 and 1.98, applicant hereby makes the documents listed below of record in the above-identified application.

U.S. Patents

Abraham et al.	Patent No. 6,829,618	December, 2004
Galensky et al.	Patent No. 6,845,398	January, 2005

PATENT
MES/002 CON

It is respectfully requested the Examiner fully consider these and any associated documents during the examination of this application, make them of record, and indicate his or her consideration of the documents by initialing the enclosed Citation List adjacent the citation of each document, and print them on any patent that may issue on this application. It is requested that a copy of the initialed Citation form be returned to applicant's undersigned Attorney. Citing of references herein shall not be deemed an admission that such references are prior art. Copies of the cited references are transmitted herewith.

Included is a USPTO Credit Card payment form which authorizes charges for \$180.00 in payment of IDS fee pursuant to 37 C.F.R. § 1.17 (p) and § 1.97(c)(2).

Respectfully submitted,

8/15/06

REPLY TO OFFICE ACTION

Sir:

In response to the Office Action dated July 5, 2006:

Remarks begin on page 2 of this paper.

REMARKS

I. Introduction

Claim 1 is cancelled without prejudice.

Claims 2-82 are pending in the application.

Applicant notes with appreciation that claims 2-82 have been indicated as allowable.

Claims 2-82 are rejected pursuant to a non-statutory double patenting rejection.

A supplemental IDS is filed herewith.

Consideration and allowance of this application in light of terminal disclaimer filed herewith is respectfully requested.

II. Applicant's Reply to the Double Patenting Rejection

Claims 2-82 are rejected pursuant to a non-statutory double patenting rejection in light of U.S. Patent No. 6,496,692. Applicant timely files herewith a terminal disclaimer pursuant to 37 C.F.R. § 321 with respect to U.S. Patent No. 6,496,692.

Accordingly, applicant respectfully requests that the double patenting rejection be withdrawn.

III. Conclusion

Based on the above, claims 2-82 are patentable. Thus, applicant respectfully requests that this case, including claims 2-82, proceed to allowance. The Examiner is invited to call the applicant's undersigned representative to discuss any issues relating to this application.

Respectfully submitted,

**TERMINAL DISCLAIMER TO OBTAIN A DOUBLE PATENTING
REJECTION OVER A "PRIOR" PATENT**

Docket Number (Optional)
MES/002 CON

In re Application of: Michael E. Shanahan

Application No.: 10/600,975

Filed: 6/20/2003

For: Methods and Apparatuses for Programming User-Defined Information into Electronic Devices

The owner*, Twenty Year Innovations, Inc., of 100 percent interest in the instant application hereby disclaims, except as provided below, the terminal part of the statutory term of any patent granted on the instant application which would extend beyond the expiration date of the full statutory term **prior patent** No. 6,496,692 as the term of said prior patent is defined in 35 U.S.C. 154 and 173, and as the term of said **prior patent** is presently shortened by any terminal disclaimer. The owner hereby agrees that any patent so granted on the instant application shall be enforceable only for and during such period that it and the **prior patent** are commonly owned. This agreement runs with any patent granted on the instant application and is binding upon the grantee, its successors or assigns.

In making the above disclaimer, the owner does not disclaim the terminal part of the term of any patent granted on the instant application that would extend to the expiration date of the full statutory term as defined in 35 U.S.C. 154 and 173 of the **prior patent**, "as the term of said **prior patent** is presently shortened by any terminal disclaimer," in the event that said **prior patent** later:

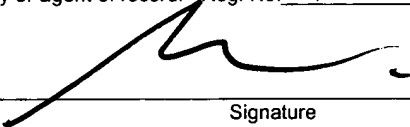

- expires for failure to pay a maintenance fee;
- is held unenforceable;
- is found invalid by a court of competent jurisdiction;
- is statutorily disclaimed in whole or terminally disclaimed under 37 CFR 1.321;
- has all claims canceled by a reexamination certificate;
- is reissued; or
- is in any manner terminated prior to the expiration of its full statutory term as presently shortened by any terminal disclaimer.

Check either box 1 or 2 below, if appropriate.

1. For submissions on behalf of a business/organization (e.g., corporation, partnership, university, government agency, etc.), the undersigned is empowered to act on behalf of the business/organization.

I hereby declare that all statements made herein of my own knowledge are true and that all statements made on information and belief are believed to be true; and further that these statements were made with the knowledge that willful false statements and the like so made are punishable by fine or imprisonment, or both, under Section 1001 of Title 18 of the United States Code and that such willful false statements may jeopardize the validity of the application or any patent issued thereon.

2. The undersigned is an attorney or agent of record. Reg. No. 45,786

This collection of information is required by 37 CFR 1.136. The information is required to obtain or retain a benefit by the public which is to file (and by the USPTO to process) an application. Confidentiality is governed by 35 U.S.C. 122 and 37 CFR 1.14. This collection is estimated to take 30 minutes to complete, including gathering, preparing, and submitting the completed application form to the USPTO. Time will vary depending upon the individual case. Any comments on the amount of time you require to complete this form and/or suggestions for reducing this burden, should be sent to the Chief Information Officer, U.S. Patent and Trademark Office, U.S. Department of Commerce, P.O. Box 1450, Alexandria, VA 22313-1450. DO NOT SEND FEES OR COMPLETED FORMS TO THIS ADDRESS. SEND TO: Commissioner for Patents, P.O. Box 1450, Alexandria, VA 22313-1450.

If you need assistance in completing the form, call 1-800-PTO-9199 and select option 2.

BEAMER, TEMICA M

ART UNIT 2617
PAPER NUMBER

DATE MAILED: 07/05/2006

Please find below and/or attached an Office communication concerning this application or proceeding.

Office Action Summary

Application No. 10/600,975	Applicant(s) SHANAHAN, MICHAEL E.	
Examiner Temica M. Beamer	Art Unit 2617	

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) Responsive to communication(s) filed on 05 April 2006.
- 2a) This action is FINAL.
- 2b) This action is non-final.
- 3) Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

- 4) Claim(s) 2-82 is/are pending in the application.
4a) Of the above claim(s) _____ is/are withdrawn from consideration.
- 5) Claim(s) _____ is/are allowed.
- 6) Claim(s) 2-82 is/are rejected.
- 7) Claim(s) _____ is/are objected to.
- 8) Claim(s) _____ are subject to restriction and/or election requirement.

Application Papers

- 9) The specification is objected to by the Examiner.
- 10) The drawing(s) filed on _____ is/are: a) accepted or b) objected to by the Examiner.
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

Priority under 35 U.S.C. § 119

- 12) Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
a) All b) Some * c) None of:
1. Certified copies of the priority documents have been received.
2. Certified copies of the priority documents have been received in Application No. _____.
3. Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

* See the attached detailed Office action for a list of the certified copies not received.

Attachment(s)

- 1) Notice of References Cited (PTO-892)
- 2) Notice of Draftsperson's Patent Drawing Review (PTO-948)
- 3) Information Disclosure Statement(s) (PTO-1449 or PTO/SB/08)
Paper No(s)/Mail Date _____
- 4) Interview Summary (PTO-413)
Paper No(s)/Mail Date. _____
- 5) Notice of Informal Patent Application (PTO-152)
- 6) Other: _____

DETAILED ACTION

Response to Arguments

1. Applicant's arguments, see pages 7-12 of "Remarks", filed April 5, 2006, with respect to the rejection(s) of claim(s) 2-82 under 102 have been fully considered and are persuasive. Therefore, the rejection has been withdrawn. However, upon further consideration, a new ground(s) of rejection is made in view of Shanahan, U.S. Patent No. 6,496,692.

Double Patenting

2. The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. A nonstatutory obviousness-type double patenting rejection is appropriate where the conflicting claims are not identical, but at least one examined application claim is not patentably distinct from the reference claim(s) because the examined application claim is either anticipated by, or would have been obvious over, the reference claim(s). See, e.g., *In re Berg*, 140 F.3d 1428, 46 USPQ2d 1226 (Fed. Cir. 1998); *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422

F.2d 438, 164 USPQ 619 (CCPA 1970); and *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) or 1.321(d) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent either is shown to be commonly owned with this application, or claims an invention made as a result of activities undertaken within the scope of a joint research agreement.

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

3. Claims 2-82 are rejected on the ground of nonstatutory obviousness-type double patenting as being unpatentable over claims 1-9 of U.S. Patent No. 6,496,692.

Although the conflicting claims are not identical, they are not patentably distinct from each other because both inventions are drawn to programming telephones with files for use as indicia of an incoming communication. Specifically, the present invention calls for the files to be video files while U.S. Patent No. 6,496,692 calls for the files to be audio files. The examiner contends, however, that video files can be considered audio files since video data is known to be "accompanied" with audio data and the examiner takes official notice as such.

At the time of invention, it would have been obvious to a person of ordinary skill in the art to modify the present invention with audio data so a user can hear the video in addition to viewing the video.

Allowable Subject Matter

4. Claims 2-82 are allowable once the double patenting rejection is overcome.

5. The following is a statement of reasons for the indication of allowable subject matter: Prior art fails to suggest or render obvious the method of customizing a wireless telephone by programming a video file into the wireless phone for use as an indicia of an incoming call as explicitly described.

Conclusion

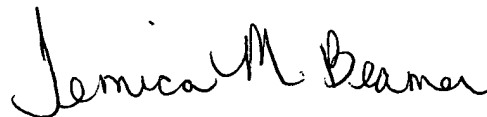

6. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Temica M. Beamer whose telephone number is (571) 272-7797. The examiner can normally be reached on Monday-Thursday (alternate Fridays) 7:00am-4:00pm.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Marsha Banks-Harold can be reached on (571) 272-7905. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see <http://pair-direct.uspto.gov>. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free). If you would like assistance from a USPTO Customer Service Representative or access to the automated information system, call 800-786-9199 (IN USA OR CANADA) or 571-272-1000.

01 FC:2253

510.00 DP

PATENT
MES/002 CON**REMARKS****I. Petition Under 37 C.F.R. § 1.136(a)**

Pursuant to 37 C.F.R. § 1.136(a), applicant hereby petitions for a three-month extension of the shortened statutory period set for reply to the Office Action dated October 6, 2005. Payment in the amount of \$510.00 of the fee set forth in 37 C.F.R. § 1.17(a)(3) may be charged to the credit card set forth in the enclosed credit card payment form.

II. Introduction

Claim 1 is cancelled without prejudice.

Claims 2-82 are pending in the application.

Claims 2-82 are rejected under 35 U.S.C. § 102(b) as being anticipated by Gerszberg et al., U.S. patent 6,385,305 (hereinafter "Gerszberg").

Consideration and allowance of this application in light of the amendments above and the following remarks is respectfully requested.

PATENT
MES/002 CONIV. Applicant's Reply to the
Rejection Under 35 U.S.C. § 102(b)

Claims 2-82 are rejected under 35 U.S.C. § 102(b) as being anticipated by Gerszberg. Applicant respectfully traverses in view of the following remarks.

One aspect of applicant's claimed invention is concerned with a wireless telephone, such as a cellular telephone, that may be customized by programming a video file into the wireless telephone for use as an indicia of an incoming communication. This may be thought of as a wireless telephone that allows a user to customize the wireless telephone by selecting and programming video into the wireless telephone that plays when a telephone call (or other communication) is incoming to the wireless telephone. Thus, when a communication is incident to the wireless telephone, the user of the wireless telephone may see and/or hear the selected video playing and may be thus alerted to the incoming communication.

The claimed wireless telephone has the ability, among other things, to connect to a remote database(s) of video and allow the user to browse lists of video files in the remote database(s), select a particular video file and optionally review a selected video using a speaker and processing circuitry prior to downloading the video file

PATENT
MES/002 CON

into a programmable memory in the wireless telephone (e.g., a preview feature). This allows the user to confirm the selected video is correct and/or acceptable or meets expectations, etc. Thus, one aspect of applicant's claimed invention is concerned with a customization of wireless telephone by allowing the review and selection of a video file that is played subsequently when receiving an incoming call.

In contrast, Gerszberg fails to show or suggest these features anywhere. Rather, Gerszberg is merely concerned with a toolkit for providing multimedia greeting or "announcement" messages for automated telephone answering machines (see Gerszberg, Abstract, column 1, lines 5-8, column 2, lines 3-6 and 54-59, column 8, lines 1-15, the claims, etc.). The greeting messages and answering machine described in Gerszberg are of a conventional type wherein the greeting message is played *after* a caller fails to reach a called party. When the called party is not reached, the caller hears and/or sees the greeting and may confirm the correct party was called and in certain instances, may be provided with the opportunity to leave a message for the called party on the answering machine (see Gerszberg, FIGS. 6-9, 13 and associated description).

PATENT
MES/002 CON

Thus, in the answering machine of Gerzberg, greeting messages are played during an automated answering sequence which begins after a call has failed to reach the intended party rather than as an indicia of an incoming call (e.g., prior to the call being answered) as specified in applicant's claims. For example, in Gerzberg, the answering sequence will not play if the called party answers the incoming call prior to the exceeding the triggering interval of the answering machine. In contrast, in applicant's claimed invention, the selected video plays when the call is inbound, prior to receipt, to the alert the wireless telephone user of the incoming call. This is not shown or suggested by Gerszberg.

Furthermore, the greetings described in Gerszberg are sent to and played on the remote video phone for the benefit of the *calling party* and not the video phone to which the selected video has been downloaded as further specified in applicant's claims (see, e.g., Gerzberg, column 9, lines 55-60, column 10, lines 15-32, column 11, lines 58-66 etc.). Accordingly, applicant respectfully submits that claims 2-82 are allowable over Gerzberg.

Moreover, applicant respectfully points out that Gerszberg fails to show or suggest a wireless telephone capable of performing the features as specified in the

PATENT
MES/002 CON

instant claims. For example, FIGS. 1 and 2 of Gerzberg show a complicated hardwired communications network, a portion of which includes video phone 130 (column 3, lines 29-53). FIG. 2 shows video phone 130 connected only by hardwired communications links (Ethernet link 119 and IEEE 1394 firewire link 112). Gerszberg explains that the hardwired video phone may include a corded or wireless handset 144 for audio communication (see column 6, lines 25-30 and FIG. 3A, reference number 144). However, handset 144 is merely a part of video phone 130 and incapable of performing any video function including those specified in applicant's claims. Nowhere in Gerzberg is a wireless phone with video capabilities shown or suggested.

Other Patentable Distinctions

In addition to the reasons above, applicant respectfully submits that at least several other patentable distinctions exist in the additional pending dependent claims including means to prevent the unauthorized distribution of the downloaded video files used as an indicia of an incoming communication, optionally modifying selected video files before programming into the wireless telephone the use of polyphonic audio files and video files including the various formats specified as well as other

PATENT
MES/002 CON

patentable features set forth in the claims that are not deemed necessary to discuss here.

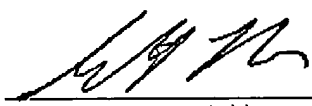

Accordingly, based on the above, applicant respectfully requests that the rejections under 35 U.S.C. § 102(b) be withdrawn.

VI. Conclusion

For at least the above reasons, claims 2-82 are patentable over the references of record. Thus, applicant respectfully requests that the Examiner withdraw the rejections and allow the pending claims. To expedite prosecution of this application to allowance, the examiner is invited to call the applicant's undersigned representative to discuss any issues relating to this application.

Respectfully submitted,

Application No. : 2,436,872
 Owner : SHANAHAN, MICHAEL E.
 Title : METHODS AND APPARATUSES FOR PROGRAMMING
 USER-DEFINED INFORMATION INTO ELECTRONIC DEVICES -
 Classification : H04M-1/247
 Your File No. : 50320-1
 Examiner : S.Chhim

YOU ARE HEREBY NOTIFIED OF A REQUISITION BY THE EXAMINER IN ACCORDANCE WITH SUBSECTION 30(2) OF THE *PATENT RULES*. IN ORDER TO AVOID ABANDONMENT UNDER PARAGRAPH 73(1)(A) OF THE *PATENT ACT*, A WRITTEN REPLY MUST BE RECEIVED WITHIN 6 MONTHS AFTER THE ABOVE DATE.

This application has been examined taking into account the:

- Description, as originally filed;
- Claims, as originally filed;
- Drawings, as originally filed.

This application has been examined taking into account applicant's correspondence received in this office on January 22, 2004.

The number of claims in this application is 239.

The examiner has identified the following defects in the application:

The claims are directed to the following categories of subject matter:

- Group A** - Claims 1-182 are directed to a wireless telephone;
- Group B** - Claims 183-200 are directed to a system for providing a video file;
- Group C** - Claims 201-209 and 230-239 are directed to an Internet site; and

CIPO

2,436,672

- 2 -

Group D - 210-229 are directed to a system for providing a polyphonic audio file.

The claims must be limited to one invention only as set out in Section 36 of the *Patent Act*.

Please note that the definition of when an application does not claim more than one invention found in Section 36 of the *Patent Act*, is not different from or additional to PCT Rule 13.1. Therefore the requirements under section 36 of the *Patent Act* are compliant with Article 27(1) of the PCT.

A search of the prior art has revealed the following:

Reference Applied:

European Patent Office Application

851,649

July 1, 1998

H04M-1/72

Armanto et al.

Armanto et al. disclose a programming of a telephone's ringing tone.

Claims 10, 44, 105, 141 and 159 do not comply with Section 28.3 of the *Patent Act*. The subject matter of these claims would have been obvious on the claim date to a person skilled in the art or science to which they pertain having regard to Armanto et al..

These claims are obvious, because Armanto et al. teaches a method, wherein a ringing tone is stored in a memory and reproduced by means of sound reproduction means as a response to an incoming call, characterised in that the ringing tone is modified into characters and sent to the telephone as characters with a ringing tone identifier. The features defined in the above claims are similar to those claimed in the Armanto et al.'s reference, namely the step of providing the user-defined audio file, and the step of enabling a user to program a portion of the audio file into the telephone.

Therefore, these claims do not comply with Section 28.3 of the Patent Act.

Claims 201-209 and 230-239 are directed to non-statutory subject matter, and are outside the definition of invention in Section 2 of the Patent Act, because they claim an Internet site using obviously a program software. A database of video or audio files is not a feature of an apparatus claim.

Claims 2, 12, 64, 107, 117, 128, 161 and 207 are ambiguous and do not comply with Subsection 27(4) of the Patent Act. The words "MPEG, MP3, WAV, PCM, MDI, JPEG, DVD, AVI and GIF" should be fully spelled, and not in their abbreviated forms, when using in these dependent and independent claims.

The subject matter of this application is outside the definition of invention in Section 2 of the Patent Act, because it is merely directed to a scheme of using a program software.

2,436,872

- 3 -

In accordance with Subsection 81(2) of the Patent Rules, all documents referred to in the description of an application must be available to the public. Reference to the document on page 1, line 8 must be deleted or replaced by its corresponding patent or publication number.

Applicant is requested to replace the present drawings by formal drawings.

In view of the foregoing defects, the applicant is requisitioned, under Subsection 30(2) of the Patent Rules, to amend the application in order to comply with the Patent Act and the Patent Rules or to provide arguments as to why the application does comply.

Under Section 29 of the *Patent Rules*, applicant is requisitioned to provide an identification of any prior art cited in respect of the United States and European Patent Office applications describing the same invention on behalf of the applicant, or on behalf of any other person claiming under an inventor named in the present application, and the patent numbers, if granted. Amendment to avoid references cited abroad may expedite the prosecution. In accordance with Subsection 29(3) of the *Patent Rules*, if the particulars are not available to the applicant, the reason why must be stated.

Application No. : 2,436,872
 Owner : TWENTY YEAR INNOVATIONS, INC.
 Title : METHODS AND APPARATUSES FOR PROGRAMMING
 USER-DEFINED INFORMATION INTO ELECTRONIC DEVICES
 Classification : H04M-1/247
 Your File No. : 50320-1~
 Examiner : S.Chhim

YOU ARE HEREBY NOTIFIED OF :

- A REQUISITION BY THE EXAMINER IN ACCORDANCE WITH SUBSECTION 30(2) OF THE PATENT RULES;
- A REQUISITION BY THE EXAMINER IN ACCORDANCE WITH SECTION 29 OF THE PATENT RULES.

IN ORDER TO AVOID MULTIPLE ABANDONMENTS UNDER PARAGRAPH 73(1)(A) OF THE PATENT ACT, A WRITTEN REPLY TO EACH REQUISITION MUST BE RECEIVED WITHIN 6 MONTHS AFTER THE ABOVE DATE.

This application has been examined taking into account applicant's correspondence received in this office on October 21, 2004.

The number of claims in this application is 171.

The examiner has identified the following defects in the application:

The claims are directed to a plurality of alleged inventions as follows:

- Group A** - Claims 1-50 and 53-84 are directed to a telephone having means for optionally reviewing the selected audio file;
- Group B** - Claims 51-52 are directed to a telephone having means for preventing the authorized distribution of a selected audio file;
- Group C** - Claims 85-147 and 150-171 are directed to a telephone having means for browsing video files; and
- Group D** - Claims 148-149 are directed to a telephone having means for preventing the unauthorized distribution of a selected video file.

2,436,872

- 2 -

The claims must be limited to one invention only as set out in section 36 of the *Patent Act*.

In view of the above, a search of the prior art has been limited to the subject matter in claims 1-50 and 53-84.

A search of the prior art has thus far failed to reveal any pertinent references.

Claims of the corresponding issued United States patent No. 6,496,692 do not have the same scope of claims 1-50 and 53-84 in this Canadian application.

In view of the foregoing defects, the applicant is requisitioned, under subsection 30(2) of the *Patent Rules*, to amend the application in order to comply with the *Patent Act* and the *Patent Rules* or to provide arguments as to why the application does comply.

Under subsection 29(1) of the *Patent Rules*, the applicant is requisitioned to provide an identification of any prior art cited in respect of the United States Patent and Trademark Office, and European Patent Office applications describing the same invention on behalf of the applicant or on behalf of any other person claiming under an inventor named in the present application, and the patent numbers, if granted. Amendment to avoid references cited abroad may expedite the prosecution. In accordance with subsection 29(3) of the *Patent Rules*, if the particulars are not available to the applicant, the reason must be stated.

**Title : METHODS AND APPARATUSES FOR PROGRAMMING
USER-DEFINED INFORMATION INTO ELECTRONIC DEVICES**
Classification : H04M-3/42
Your File No. : 51170-1D
Examiner : Kristy Hyam

YOU ARE HEREBY NOTIFIED OF :

- A REQUISITION BY THE EXAMINER IN ACCORDANCE WITH SUBSECTION 30(2) OF THE *PATENT RULES*;
- A REQUISITION BY THE EXAMINER IN ACCORDANCE WITH SECTION 29 OF THE *PATENT RULES*.

IN ORDER TO AVOID MULTIPLE ABANDONMENTS UNDER PARAGRAPH 73(1)(A) OF THE PATENT ACT, A WRITTEN REPLY TO EACH REQUISITION MUST BE RECEIVED WITHIN 6 MONTHS AFTER THE ABOVE DATE.

This application has been examined as originally filed.

The number of claims in this application is 57.

The examiner has identified the following defects in the application:

The search of the prior art has revealed the following:

References Applied:

<u>PCT Application</u>			
98/11487	Mar. 19, 1998	G06F 13/00	Katz et al.
<u>United States Patent</u>			
5,694,455	Dec. 2, 1997	H04M 11/00	Goodman

Katz et al. disclose a method and system of downloading digital information to a mobile digital information playback device.

2,492,727

- 2 -

Goodman discloses a method and system for allowing a mobile user to select and download audio programs.

Obviousness

Claims 1-57 do not comply with section 28.3 of the *Patent Act*. The subject matter of claims 1-27 would have been obvious on the claim date to a person skilled in the art or science to which they pertain having regard to Katz et al., and the subject matter of claims 28-57 would have been obvious on the claim date to a person skilled in the art or science to which they pertain having regard to Katz et al. or Goodman.

Katz et al. discloses a system for providing digital information to a mobile device. This digital information can be either video or audio information. The user can browse the digital information available on a library server and select what to download. Authentication and encryption are provided to prevent the unauthorized downloading and copying of protected works. Goodman discloses a method and system specifically for downloading audio files to a mobile user terminal, as in claims 28-57. Thus, claims 1-57 are therefore obvious in view of the applied references.

Lack of Support

Claims 19-27 and 48-57 do not comply with section 84 of the *Patent Rules* because there is no support in the present description for the subject matter of these claims. Specifically, an Internet site with all of the claimed functionality is not present in the present description.

Claims 1-57 do not comply with section 84 of the *Patent Rules*. The description indicates on page 3, lines 7-28 and page 5, line 8 to page 6, line 3 that the communication links between the programmer, the source, and the device materially affects the way the invention works, and is therefore essential. In order to provide support for the utility as disclosed in the description, this feature has to be incorporated in these claims.

Description Informalities

On page 7, line 22, the term 'processor 40' should be changed to either "processor 34" or "SPC 40".

In view of the foregoing defects, the applicant is requisitioned, under subsection 30(2) of the *Patent Rules*, to amend the application in order to comply with the *Patent Act* and the *Patent Rules* or to provide arguments as to why the application does comply.

2,492,727

- 3 -

Under subsection 29(1) of the *Patent Rules*, the applicant is requisitioned to provide an identification of any prior art cited in respect of the United States Patent and Trademark Office application describing the same invention on behalf of the applicant or on behalf of any other person claiming under an inventor named in the present application, and the patent number, if granted. Amendment to avoid references cited abroad may expedite the prosecution. In accordance with subsection 29(3) of the *Patent Rules*, if the particulars are not available to the applicant, the reason must be stated.

 USER-DEFINED INFORMATION INTO ELECTRONIC DEVICES**
 Classification : H04M-1/247
 Your File No. : ~~50320-1~~ 51130-1
 Examiner : S.Chhim

YOU ARE HEREBY NOTIFIED OF :

- A REQUISITION BY THE EXAMINER IN ACCORDANCE WITH SUBSECTION 30(2) OF THE *PATENT RULES*;
- A REQUISITION BY THE EXAMINER IN ACCORDANCE WITH SECTION 29 OF THE *PATENT RULES*.

IN ORDER TO AVOID MULTIPLE ABANDONMENTS UNDER PARAGRAPH 73(1)(A) OF THE *PATENT ACT*, A WRITTEN REPLY TO EACH REQUISITION MUST BE RECEIVED WITHIN 6 MONTHS AFTER THE ABOVE DATE.

This application has been examined taking into account applicant's correspondence received in this office on June 28, 2005.

The number of claims in this application is 171.

The examiner has identified the following defects in the application:

The search of the prior art has revealed the following:

Reference Applied:

<u>Korean Patent document</u>			
kr99024210	March 25, 1999	H04B-1/40	Jaehan

Jaehan disclose a system for restoring and playing back of digital data on wireless mobile terminal.

Claims 10,51, 94 and 130 do not comply with section 28.3 of the *Patent Act*. The subject matter of these claims would have been obvious on the claim date to a person skilled in the art or science to which they pertain having regard to Jaehan.

2,436,872

- 2 -

Claims 10, 51, 94 and 130 are obvious, because Jaehan teaches a system having a function of storing digital audio data encoded by MP3 or AAC into the memory and a function of decoding the data to decoded original audio signal that are added to a wireless mobile terminal, whereby, using various methods, a first method is PC interfacing method to connect with Internet, a second method is requesting method of the digital audio data encoded by MP3 or AAC via the public communication network or data network that is wire or wireless channel, and a third method is passive receiving method of the digital audio data transmitted from station, that can store the digital audio data encoded by MP3 or AAC into a memory, decoded the digital audio data stored in the memory to decoded original audio signal. The system is implemented with convenient mobile services of telephone and audio on demand (AOD) or music on demand (MOD), with a main function of the system, in using a wireless mobile terminal, by an additional function in storing and playback of the digital audio data encoded by MP3 or AAC. Features of claims 10, 51, 94 and 130 are similar to those defined in the specifications of Jaehan's reference.

Therefore, claims 10, 51, 94 and 130 do not comply with Section 28.3 of the Patent Act.

In view of the foregoing defects, the applicant is requisitioned, under subsection 30(2) of the *Patent Rules*, to amend the application in order to comply with the *Patent Act* and the *Patent Rules* or to provide arguments as to why the application does comply.

Section 29 of the Patent Rules requisition

Under section 29 of the *Patent Rules*, the applicant is requisitioned to provide:

- identification of any prior art cited in respect of the European Patent Office application describing the same invention on behalf of the applicant or on behalf of any other person claiming under an inventor named in the present application, and the patent number, if granted, subsequent to the International Search Report under paragraph 29(1)(a) of the *Patent Rules*.

To satisfy this requisition, applicant should provide all the preceding information or documents, or provide in accordance with subsection 29(3) of the *Patent Rules* a statement of reasons why any information or document is not available or known.

Office Action Summary	Application No. 10/600,975	Applicant(s) SHANAHAN, MICHAEL E.	
	Examiner Joy K Contee	Art Unit 2686	

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) Responsive to communication(s) filed on 20 June 2003.
- 2a) This action is **FINAL**. 2b) This action is non-final.
- 3) Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

- 4) Claim(s) 2-82 is/are pending in the application.
4a) Of the above claim(s) _____ is/are withdrawn from consideration.
- 5) Claim(s) _____ is/are allowed.
- 6) Claim(s) 2-82 is/are rejected.
- 7) Claim(s) _____ is/are objected to.
- 8) Claim(s) _____ are subject to restriction and/or election requirement.

Application Papers

- 9) The specification is objected to by the Examiner.
- 10) The drawing(s) filed on 20 June 2003 is/are: a) accepted or b) objected to by the Examiner.
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

Priority under 35 U.S.C. § 119

- 12) Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
a) All b) Some * c) None of:
1. Certified copies of the priority documents have been received.
 2. Certified copies of the priority documents have been received in Application No. _____.
 3. Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).
- * See the attached detailed Office action for a list of the certified copies not received.

DETAILED ACTION

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2. Claims 2-82 are rejected under 35 U.S.C. 102(b) as being anticipated by Gerszberg et al. (Gerszberg), US. Patent No. 6,385,305.

Regarding claims 2-82, Gerszberg discloses a method of customizing a wireless telephone by programming a video file into the wireless telephone for use as an indicia of an incoming communication the method comprising:

connecting to a remote database that includes a plurality of lists of video files;
allowing a user of the wireless telephone to browse at least one of the lists of video files; allowing the user of the wireless telephone to select at least one of the video files from the browsed list; optionally reviewing the selected video file before downloading the selected video into the wireless telephone; and allowing the user to optionally download the selected video file for use as an indicia of an incoming communication (col. 9, line 32 to col. 10, line 5).

Conclusion

3. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Art Unit: 2686

Kobayashi, U.S. Patent No. 5,963,877, discloses a telephone call receiver indicator.

4. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Joy K Contee whose telephone number is 571.272.7906. The examiner can normally be reached on Monday through Friday, 5:30 a.m. to 2:00 p.m.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Marsha Banks-Harold can be reached on 571.272.7905. The fax phone number for the organization where this application or proceeding is assigned is 571.273.8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see <http://pair-direct.uspto.gov>. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).

*EXAMINER: Initial reference considered, whether or not citation is in conformance with MPEP 609. Draw line through citation if not in conformance and not considered. Include copy of this form with next communication to applicant. ¹ Applicant's unique citation designation number (optional). ² See Kinds Codes of USPTO Patent Documents at www.uspto.gov or MPEP 901.04. ³ Enter Office that issued the document, by the two-letter code (WIPO Standard ST.3). ⁴ For Japanese patent documents, the indication of the year of the reign of the Emperor must precede the serial number of the patent document. ⁵ Kind of document by the appropriate symbols as indicated on the document under WIPO Standard ST.16 if possible. ⁶ Applicant is to place a check mark here if English language Translation is attached.

This collection of information is required by 37 CFR 1.97 and 1.98. The information is required to obtain or retain a benefit by the public which is to file (and by the USPTO to process) an application. Confidentiality is governed by 35 U.S.C. 122 and 37 CFR 1.14. This collection is estimated to take 2 hours to complete, including gathering, preparing, and submitting the completed application form to the USPTO. Time will vary depending upon the individual case. Any comments on the amount of time you require to complete this form and/or suggestions for reducing this burden, should be sent to the Chief Information Officer, U.S. Patent and Trademark Office, P.O. Box 1450, Alexandria, VA 22313-1450. DO NOT SEND FEES OR COMPLETED FORMS TO THIS ADDRESS. SEND TO: Commissioner for Patents, P.O. Box 1450, Alexandria, VA 22313-1450.

If you need assistance in completing the form, call 1-800-PTO-9199 (1-800-786-9199) and select option 2.

Under the Paperwork Reduction Act of 1995, no persons are required to respond to a collection of information unless it contains a valid OMB control number.

Under the Paperwork Reduction Act of 1995, no persons are required to respond to a collection of information unless it displays a valid OMB control number.

STATEMENT UNDER 37 CFR 3.73(b)

Applicant/Patent Owner: Twenty Year Innovations, Inc.

Application No./Patent No.: 10/600,975 Filed/Issue Date: June 20, 2003

Entitled: METHODS AND APPARATUSES FOR PROGRAMMING USER-DEFINED INFORMATION INTO ELECTRONIC DEVICES

Twenty Year Innovations, Inc., a corporation
(Name of Assignee) (Type of Assignee, e.g., corporation, partnership, university, government agency, etc.)

states that it is:

- 1. the assignee of the entire right, title, and interest; or
- 2. an assignee of less than the entire right, title and interest.
The extent (by percentage) of its ownership interest is _____ %

in the patent application/patent identified above by virtue of either:

A. An assignment from the inventor(s) of the patent application/patent identified above. The assignment was recorded in the United States Patent and Trademark Office at Reel 015027, Frame 0049, or for which a copy thereof is attached.

OR

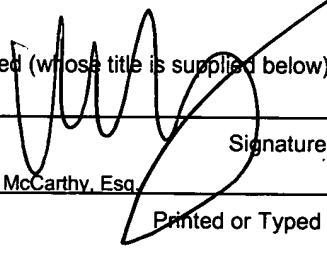

B. A chain of title from the inventor(s), of the patent application/patent identified above, to the current assignee as shown below:

- 1. From: _____ To: _____
The document was recorded in the United States Patent and Trademark Office at Reel _____, Frame _____, or for which a copy thereof is attached.
- 2. From: _____ To: _____
The document was recorded in the United States Patent and Trademark Office at Reel _____, Frame _____, or for which a copy thereof is attached.
- 3. From: _____ To: _____
The document was recorded in the United States Patent and Trademark Office at Reel _____, Frame _____, or for which a copy thereof is attached.

Additional documents in the chain of title are listed on a supplemental sheet.

Copies of assignments or other documents in the chain of title are attached.
[NOTE: A separate copy (i.e., a true copy of the original assignment document(s)) must be submitted to Assignment Division in accordance with 37 CFR Part 3, if the assignment is to be recorded in the records of the USPTO. See MPEP 302.08]

The undersigned (whose title is supplied below) is authorized to act on behalf of the assignee.

(54) Title: A DIGITAL INFORMATION LIBRARY AND DELIVERY SYSTEM

(57) Abstract

A computer network based digital information library system employing authentication and encryption protocols for the secure transfer of digital information library programs to a client computer system (214) and a mobile digital information playback device (212) removably connectable to the client computer system. The present invention is a computer network based library and information delivery system for accessing and obtaining selected digital information files. The library and information delivery system comprises: 1) a library server (260) having a plurality of digital information files; 2) a client computer system (214) coupled to the library server (260) over a network (240); and 3) a mobile device (212) removably connectable to the client computer system (214), the client computer system (214) including logic for requesting a download of a selected one or more of the digital information files from the library server (260), the client computer system (214) further including logic for downloading the selected one or more of the digital information files to the mobile device (212).

1
**A DIGITAL INFORMATION LIBRARY
AND DELIVERY SYSTEM**

FIELD OF THE INVENTION

The present invention relates generally to a digital information transmission, receiving, and playback system. Specifically, the present invention pertains to a computer network based digital information library providing interactive client computer access.

DESCRIPTION OF RELATED ART

Recent technological advances in the compression of digital data and the expansion of storage capacities of computer systems together with the increased bandwidth of computer network infrastructures have created new possibilities for personalized access to and usage of large amounts of digital information. One form of this type of digital information is audio information delivered across a computer network as digitized information.

In the field of interactive digital information transmission, receiving, and playback systems, several patents are known to the present applicants. U.S. Patent No. 5,132,992, issued July 21, 1992 to Yurt et al. (Yurt), describes a system of distributing video and/or audio information employing digital signal processing to achieve high rates of data compression. The Yurt patent describes a transmission system including a conversion means for placing the items from a source material library into a predetermined format as formatted data. Audio data is compressed by an audio compressor by application of an adaptive differential pulse code modulation (ADPCM) process to the audio data. Stored items are accessed in the compressed data library through the use of a unique address code assigned to each item during storage encoding. The unique address code is used for requesting and accessing information and items throughout the Yurt transmission and receiving process. The Yurt transmission system includes means by which a user enters a customer identifier (ID) code by which the system accesses the users account, and indicates to the system that the user is a subscriber of the system. If a subscriber is in good standing, the Yurt system delivers selected titles using the described techniques.

One significant problem with the audio transmission and receiving system described in Yurt is the lack of an effective means for ensuring the security of the digital information library and of the items downloaded to a user from the digital information library. Although Yurt describes the use of a unique identification code assigned to items in the library and a customer ID code assigned to particular users, no authentication protocols or encryption techniques are described to prevent the unauthorized creation of clone libraries or the unauthorized download or copying of library items. Secondly, Yurt and related prior art does not describe an authentication or encryption means providing secure transactions between a server based digital information

2

library supporting a client computer system having an interface to a mobile playback device. Thirdly, the prior art does not describe a mechanism for selecting a digital information passage to be previewed. Prior art systems also do not describe a system whereby only part of a program gets downloaded from a client computer system to a mobile playback device depending on how much storage space is available in the mobile playback device. Prior art systems also do not describe a mechanism for specifying multiple programs to be downloaded from a digital information library into a mobile playback device. Prior art systems also do not detail the processes required in the authoring system to generate content for the digital information library. Finally, prior art systems do not describe an accounting system whereby library content providers can perform real-time queries on usage information related to the access of library items.

SUMMARY OF THE INVENTION

The preferred embodiment of the present invention is a computer network based digital information library system employing authentication, targeting, and encryption protocols for the secure transfer of digital information library programs to a client computer system and a mobile digital information playback device removably connectable to the client computer system. The present invention is a computer network based library and information delivery system for accessing and obtaining selected digital information files. The library and information delivery system comprises: 1) a library server having a plurality of digital information files; 2) a client computer system coupled to the library server over a network; and 3) a mobile device removably connectable to the client computer system, the client computer system including logic for requesting a download of a selected one or more of the digital information files from the library server, the client computer system further including logic for downloading the selected one or more of the digital information files to the mobile device.

BRIEF DESCRIPTION OF THE DRAWINGS

The accompanying drawings, which are included as part of the present specification, illustrate the presently preferred embodiment of the present invention and together with the general description given above and the detailed description of the preferred embodiment given below serve to explain and teach the principles of the present invention.

Figure 1 illustrates a typical computer platform on which the present invention may be implemented.

Figure 2 illustrates a high level block diagram of the computer network based digital information library system of the present invention.

Figure 3 illustrates a high level block diagram of the authoring system of the present invention.

Figure 4 illustrates an alternative embodiment having a plurality of library servers.

Figure 5 illustrates an alternative embodiment having a plurality of library server processes.

Figure 6 illustrates an alternative embodiment having a single authoring/authorization server.

Figure 7 illustrates an alternative embodiment wherein client computer systems have a local library.

Figure 8 illustrates an alternative embodiment wherein mobile playback devices have a direct network interface in lieu of a client computer system.

Figure 9 illustrates an alternative embodiment wherein a kiosk is used to retain and distribute selected programming.

Figure 10 illustrates an alternative embodiment wherein all system components are connected through a common network.

**DETAILED DESCRIPTION OF
THE PREFERRED EMBODIMENT**

The preferred embodiment of the present invention is a computer network based digital information library system employing authentication, targeting, and encryption protocols for the secure transfer of digital information library programs to a client computer system and a mobile digital information playback device removably connectable to the client computer system. In the following detailed description, numerous specific details are set forth in order to provide a thorough understanding of the present invention. However, it will be apparent to one of ordinary skill in the art that these specific details need not be used to practice the present invention. In other instances, well known structures, interfaces, and processes have not been shown in detail in order not to unnecessarily obscure the present invention.

Figure 1 illustrates a typical data processing system upon which one embodiment of the present invention is implemented. It will be apparent to those of ordinary skill in the art, however that other alternative systems of various system architectures may also be used. The data processing system illustrated in Figure 1 includes a bus or other internal communication means 101 for communicating information, and a processor 102 coupled to the bus 101 for processing information. The system further comprises a random access memory (RAM) or other volatile storage device 104 (referred to as main memory), coupled to bus 101 for storing information and instructions to be executed by processor 102. Main memory 104 also may be used for storing temporary variables or other intermediate information during execution of instructions by processor 102. The system also comprises a read only memory (ROM) and/or static storage device 106 coupled to bus 101 for storing static information and instructions for processor 102, and a mass storage device 107 such as a magnetic disk drive or optical disk drive. Mass storage device 107 is coupled to bus 101 and is typically used with a computer readable mass storage medium 108, such as a magnetic or optical disk, for storage of information and instructions. The system may further be coupled to a display device 121, such as a cathode ray tube (CRT) or a liquid crystal display (LCD) coupled to bus 101 through bus 103 for displaying information to a computer user. An alphanumeric input device 122, including alphanumeric and other keys, may also be coupled to bus 101 through bus 103 for communicating information and command selections to processor 102. An additional user input device is cursor control 123, such as a mouse, a trackball, stylus, or cursor direction keys coupled to bus 101 through bus 103 for communicating direction information and command selections to processor 102, and for controlling cursor movement on display device 121. Another device which may optionally be coupled to bus 101 through bus 103 is a hard copy device 124 which may be used for printing instructions, data, or other information on a medium such as paper, film, or similar types of media. In the preferred embodiment, a communication device 125 is coupled to bus 101 through

6

bus 103 for use in accessing other nodes of a network computer system or other computer peripherals. This communication device 125 may include any of a number of commercially available networking peripheral devices such as those used for coupling to an Ethernet, token ring, Internet, or wide area network. It may also include any number of commercially available peripheral devices designed to communicate with remote computer peripherals such as scanners, terminals, specialized printers, or audio input/output devices. Communication device 125 may also include an RS232 or other conventional serial port, a conventional parallel port, a small computer system interface (SCSI) port or other data communication means. Communications device 125 may use a wireless means of data transfer devices such as the infrared IRDA protocol, spread-spectrum, or wireless LAN. In addition, communication device 125 is used in the preferred embodiment to couple the mobile playback device 212 to the client computer system 214 as described in more detail below. One other device used in the preferred embodiment is sound circuitry 130 either with attached speakers or headphones 132, or with analog audio outputs suitable for input into audio reproduction equipment such as external amplifiers and speakers, cassette adapters, etc. Sound circuitry 130 is well known in the art for playing audio files. Alternatively, sound circuitry may be a radio transmitter which transmits audio data on a predefined frequency for reception and playback by a radio receiver. Other wireless methods are possible.

Note that any or all of the components of the system illustrated in Figure 1 and associated hardware may be used in various embodiments of the present invention; however, it will be appreciated by those of ordinary skill in the art that any configuration of the system may be used for various purposes according to the particular implementation. In one embodiment of the present invention, the data processing system illustrated in Figure 1 is an IBM® compatible personal computer (PC), an Apple Macintosh® personal computer, or a SUN® SPARC Workstation. Processor 102 may be one of the 80X86 compatible microprocessors such as the 80486 or PENTIUM® brand microprocessors manufactured by INTEL® Corporation of Santa Clara, California.

The software implementing the present invention can be stored in main memory 104, mass storage device 107, or other storage medium accessible to processor 102. It will be apparent to those of ordinary skill in the art that the methods and processes described herein can be implemented as software stored in main memory 104 or read only memory 106 and executed by processor 102. This software may also be resident on an article of manufacture comprising a computer usable mass storage medium 108 having computer readable program code embodied therein and being readable by the mass storage device 107 and for causing the processor 102 to perform digital information library transactions and protocols in accordance with the teachings herein.

Digital Information Library System

Figure 2 illustrates the computer network architecture used in the preferred embodiment of the present invention. In general, the network architecture of the present invention includes a library site 250 coupled to a client site 210 via a conventional distribution network infrastructure 240. This conventional distribution network infrastructure 240 can be implemented as a standard telephone connection provided between the library site 250 and client site 210 through an Internet provider to enable data communication on the Internet over a conventional telephone network. This use of the Internet as a distribution network is well known to those of ordinary skill in the art. In an alternative embodiment having cable modem capability, communication over a conventional cable network is possible in lieu of communication over the telephone network. The cable network is typically much faster (i.e. provides a much greater bandwidth) than the standard telephone network; however, cable modems are typically more expensive than standard POTS (plain old telephone system) modems. In another alternative embodiment having conventional Integrated Services Digital Network (ISDN) capability, the distribution network 240 is accessed using an ISDN modem. Again, the ISDN network is typically faster than the POTS network; however, access to an ISDN network is generally more expensive. Cable modems and ISDN implementations are alternative communications media to the POTS implementation.

In addition, it will be apparent to those of ordinary skill in the art that other forms of networking may equivalently be supported by the present invention. For example, a wireless transmission means such as infrared or radio links may also provide the distribution network 240 described in the present application. As an alternative to the Internet, a proprietary network/bulletin board such as AMERICA-ON-LINE (AOL), or COMPUSERVE may be used.

Each of the servers at library site 250 and the client computer system 214 at client site 210 can be implemented as a computer system such as the one described above in connection with Figure 1. It will be apparent to one of ordinary skill in the art that the library server 260, authoring system 280, and authorization server 270 can be remotely located yet networked together as a distributed system using the techniques described above. In addition, the present invention allows for multiple library servers, authoring systems and authorization servers. Conversely, the servers may be implemented as separate functions of a single machine. These alternative embodiments are illustrated in Figures 4-8 and are described in more detail below.

The mobile playback device 212 is a minimally configured, low-cost, standalone mobile unit for receiving and storing digital information files or programs as downloaded by library server 260 and client computer system 214 and for playing back the digital information files or programs for a user of the mobile playback device 212. The mobile playback device 212 is temporarily removably coupled to the client computer system 214 while the download takes place.

Once downloaded, the mobile playback device 212 may be detached from the client computer system 214 and used as a standalone digital information playback device. A co-pending U.S. Patent Application titled, "Interactive Audio Transmission, Receiving and Playback System", assigned Serial No. 08/490,537, and assigned to the Audible Words Corporation of Montclair, NJ describes the details of mobile playback device 212.

In its basic form, the preferred embodiment of the present invention is a digital information library system providing selection of digital information programming on demand over a computer network. In an alternative embodiment, the digital information programming is selected via the computer network but delivered using mass storage media 241. This alternative embodiment is described in more detail below.

The digital information library is an indexed collection of digital information programming, drawing content from digital information sources such as books, daily news and entertainment feeds, conferences and educational sources, other computer systems, the host on the World Wide Web (WWW) of the Internet, and customized audio or visual image programming. Other sources of the digital information content include, but are not limited to, conference or seminar proceedings, lecture or speech materials, language lessons, readings, comedy, customized spoken digests and related, "need-to-know" business information, computer software, local sound studio material, text to speech conversion of machine readable files, pre-recorded material from magnetic tape, CD-ROM, digital audio tape, or analog cassette tape. This digital information content is input as raw digital information content to authoring system 280 shown in Figure 2. In an alternative embodiment, a raw digital information digitizer 307 is included for receiving raw input and converting the input to a digital form which can be manipulated as a digital information file.

In an alternative embodiment, the digital information comprises digitized image or graphics data used to produce visual images on a display screen or projection screen. These images may be included in the digital information retained and maintained by the library server 260.

Authoring System

Authoring system 280 is used to edit, index, compress, scramble, segment, and catalog digital information content into digital information programs in digital information files, which are stored on mass storage media 241 or on library server 260 as scrambled and compressed digital information files 262. The digital information programs are initially categorized according to traditional criteria (e.g. genre, modern fiction, mystery, adventure, romance, non-fiction, classics, self-help, science fiction, westerns, etc.). Categories associated with specific authors or publishers are also provided. Both unabridged and abridged titles are provided. In some circumstances, it may be necessary to digitize digital information content from an undigitized form. The raw information digitizer 307 is provided for this purpose. Authoring system 280 also

partitions digital information content into segments, which can be identified, searched, and skipped over if desired. All of these functions are performed by authoring system 280.

Figure 3 illustrates the authoring system 280 of the preferred embodiment. Authoring system 280 receives digital information content from a variety of conventional sources as raw digitized data. This digital information data is fed to three components of the authoring system 280 of the preferred embodiment. The digital information compressor 314 receives the raw digital data and compresses the digitized data. There are a variety of conventional techniques in existence for compressing digital data. These techniques can be optimized depending upon the type of digital data being processed. Thus, the present invention provides several compression methods and a means for the authoring system operator 305 to select between these methods based upon the category of digital information content 310 being input to the digital information compressor 314. Alternatively, the selection of compression method may be performed automatically by interpretation of the digital information content 310 itself. A compressed digital information file is output by digital information compressor 314 to scrambler 318.

The raw digital information content 310 is also fed to template header generator 312. Each digital information file maintained by the library server 260 includes other descriptive information used to identify the file's content and to provide information used to process the digital information within the file. Each digital information file includes a template header, a descrambling map, selected preview clips, and the digital information programming itself. In the preferred embodiment, the template header comprises a number of attributes corresponding to the digital information in the file. For example, the digital information may be audio information generated from the content of a book or other published work. In this example, the audio file template header contains attributes including: 1) the title of a book, volume, or medium from which the digital information content originated, 2) the legal copyright associated with the digital information content, 3) audible title(s) of the content, 4) a table of contents of the content, and 5) playback settings for appropriately playing or rendering the digital information. The table of contents contains content navigation information including but not limited to: the number of chapters, the length of the program, and information indicative of the relevant content sections. The table of contents is generated with input from authoring system operator 305 or automatically by analysis of digital information content 310. The descrambling map 322 is used to interpret the digital information after the digital information has been scrambled by scrambler 318 as described below. The preview clips 324 comprise short pre-generated portions of digital information content used to give a consumer a sense of the content of a particular digital information file. In the preferred embodiment, these previews are generated as conventional formatted files which can be directly played by sound generation circuitry 130 or rendered by other means. A digital information file can have several preview clips associated with it. The preview clips 324 are not compressed or

scrambled in the preferred embodiment. The template header 312 remains with the digital information file as it is transferred to the network 240 or mass storage media 241. The other descriptive information related to a digital information file is typically stored with digital information file, but is not required to be so stored.

Referring again to Figure 3, template header generator 312 generates the template header given information from a particular portion of digital information content 310. Input from Authoring System Operator 305 and Digital Information Compressor 314 may be solicited during the header generation process. The template header is provided to library server 260. Other portions of the digital information file header are provided by scrambler 318 and preview generator 323. These portions of the digital information file header are assembled into the header for a particular digital information file by library server 260. The remainder of the digital information file is filled with compressed, scrambled, and segmented digital information content.

After digital information compressor 314 has compressed the raw digital information using a selected compression method suitable for the category of digital information, the scrambler 318 scrambles the digital information. The digital information is scrambled to prevent an unauthorized consumer from using the digital information. In the preferred embodiment, scrambler 318 uses a conventional encryption method to render the data unusable. A corresponding descrambling map 322 is generated to provide a means for descrambling the scrambled digital information file. A scrambling map 316 is used by scrambler 318 to scramble the digital information file. The scrambler 318 can encrypt the entire digital information file or selected critical subsets of the digital information file. The level of scrambling can be selected depending upon the capabilities of the authoring system 280, the mobile playback device 212 and/or the anticipated software player 226 on client computer system 214. In an alternative embodiment, a proprietary digital information format is used in lieu of scrambler 318.

The scrambled digital information content is output by scrambler 318 to segmentation logic 326. Segmentation logic 326 partitions the digital information content into blocks for efficient storage in and transfer to a mobile playback device 212 or software player 226 and for efficient navigation during playback. Transport integrity data is generated and appended to the segmented digital information. In an alternate embodiment, portions of the segmentation process may take place before or after digital information compressor 314 and scrambler 318. Segmentation information may also be used in the header generation process by template header generator 312. The compressed, scrambled, and segmented digital information blocks are provided to the library server 260 by authoring system 280. Library server 260 assembles the segmented digital information blocks, the descrambling map 322, the preview clip(s) 324, and the template header 312 for a particular item of digital information content into a digital information program file or files, which are stored in a digital information program file storage area 262. Other raw digital

information content is converted into digital information files using the authoring system 280 in a similar manner.

Library Server

Referring again to Figure 2, the library server 260 is responsible for maintaining the digital information program files 262 created by the authoring system 280. In addition, the library server 260 receives requests for access to the digital information program files 262 from client computer systems 214 over network 240 and manages purchase and delivery of the selected digital information files and/or delivery of selected preview clips 324. The library server 260 includes library management software 261 for performing these library server functions and a library key 263 used for the authentication protocol described below. Library management software 261 includes processing logic for receiving and responding to client computer system 214 requests for access and/or purchase of a digital information program file 262. Upon receiving such a client request, library server 260 uses authorization server 270 to authenticate the request with client information 272 generated and maintained by library server 260 or authorization server 270. The client information 272 includes client identifiers which are used to target content for playback on individual mobile playback devices 212 or software players 226. Client information 272 may also contain client personal information, user content preferences, client billing history, player usage history, and player group lists. In an alternative embodiment, portions of client information 272 may instead be stored in server 260. Using the authorization protocol described in more detail below, the library server 260 determines if the client request can be serviced. If approved, the library server 260 accesses the digital information program file(s) or preview clip(s) requested by the client computer system 214, delivers the selected preview clip(s) or builds encrypted, targeted, and digitally signed digital information files using the authentication protocol described in more detail below, and transfers the encrypted and compressed digital information file(s) to the requesting client computer system 214 via network 240. Distributable mass storage media 241 may also be used as a delivery medium for the transfer of information to client system 214. The client computer system 214 may then independently download the selected digital information files (or a subset thereof) into the mobile playback device 212 for subsequent playback. The library server 260 also collects usage statistics on the access history of the digital information files 262 and stores this usage data into usage statistic storage area 264. The library server 260 also stores operating code segments (firmware) for the client browser 219, software player 226, and for mobile playback device 212. This operating code can be downloaded to the client computer system 214 in the same manner as digital information files are transferred. Player configuration data for playback device 212 and software player 226 is stored on the library server 260 and can be customized or updated in the same manner as digital information files and firmware are

12

transferred. Configuration data includes, but is not limited to, audio prompts, user interface options, group ID information, and information playback parameters. Player configuration data is transferred to client computer system 214, software player 226, or mobile playback device 212 as required according to client information 272.

The library server 260 interfaces with a client application program or client browser 219 executing on client computer system 214. The client browser 219 is used to make requests of library server 260 for various types of service including, but not limited to, searching the digital information files 262 for a desired program, previewing a selected preview clip associated with a digital information file 262, purchasing a selected program, requesting operating code segments or player configuration data, and downloading the purchased program or other material to the requesting client computer system 214.

The library server 260 interface with the authorization server 270 and client computer system 214 uses the unique authentication protocol and encryption protocol of the preferred embodiment of the present invention. The preferred embodiment of these protocols is described in the sections below.

Client Computer System

Referring again to Figure 2, the client computer system 214 represents a consumer or end user computer system, typically a personal computer, such as the sample system illustrated in Figure 1, with which a consumer may browse, preview, select, purchase, and take delivery of digital information content from digital information library server 260 across distribution network 240. Client computer system 214 comprises client browser software 219, a mobile device interface 221, storage for encrypted and compressed digital information files 220 downloaded from the network 240, software player 226, and segment download data 222 derived from digital information files 220 for defining the storage segments in mobile playback device 212 and for assisting in the downloading of digital information files 220 from client computer system 214 to mobile playback device 212. Client computer system 214 also includes a server public key 215 used for authenticating digital information and software files received from server 260. Client browser software 219 provides the control logic with which the client or consumer accesses and purchases titles from the digital information library 262 of library server 260. Client browser software 219 also provides control logic which requests and downloads configuration information or operating code from server 260. The client browser software 219 can be configured to perform these operations without direct human intervention. The mobile device interface 221 is a software interface used to control the transfer of control information, operating code, and digital information files from client computer system 214 to mobile playback device 212. Encrypted and compressed digital information files 220 are received by client computer system 214 from library

server 260 over network 240. In an alternate embodiment, distributable mass storage media 241 is used instead of network 240 to transfer information to client computer system 214. The software player 226 is a software module used to emulate the operation of mobile playback device 212 and for playing digital information files through the sound circuitry 130 and audio output device 132 of client computer system 214. Operating code and configuration information for the software player 226 can be downloaded or updated from the server 260 in the same manner as the mobile playback device 212 can be downloaded or updated. The software player 226 functionality is the equivalent of the functionality and operation of the mobile playback device 212. Thus, the use of the term "player" throughout this document generally applies to both the mobile playback device 212 and software player 226. Software players 226 are assigned unique player IDs and can be assigned group IDs that function similarly to IDs assigned to mobile playback devices 212.

Mobile Playback Device

The mobile playback device 212 converts a digital information file into sound or displayable imagery which is played through audio output means or displayed on a display device. In the preferred embodiment, the mobile playback device 212 is a minimal capability, low-cost device primarily dedicated to playing audio files or displaying visual images or text on a display device. The mobile playback device 212 is minimally configured to retain its light-weight, low cost, and readily mobile features. The preferred embodiment does not therefore include the use of a portable personal computer or laptop computer as the mobile playback device 212; because, such general purpose computing devices typically do not meet the light-weight and low cost constraints of the preferred mobile playback device 212. Such general purpose computing devices typically have unnecessary functionality, more complicated interfaces, and may suffer cost and performance penalties in comparison to the special purpose mobile playback device 212. In the preferred embodiment, the mobile playback device 212 includes a processor, memory, and an interface to client computer system 214 over which compressed digital information files 216 are received. As described in more detail below, mobile playback device 212 also includes a player ID 223, group IDs 225, and server public key 215 used for authenticating digital information and software files received from server 260 via client computer system 214. The user controls the mobile playback device 212 using buttons and knobs provided on the device. These controls are used to navigate through digital information files 216, adjust configuration data and playback parameters, or perform other functions as directed by firmware stored in playback device 212. When coupled to the player, client computer system 214 or other electronic devices can solicit user input from these controls. In an alternative embodiment, a set of additional user controls is provided on a remote control unit that is coupled to the player via a wired or wireless connection. Digital information output may be provided via a headphone jack, on board speaker, or wireless transmitter to a

separate wireless receiver with speakers or headphones. Audio level can be adjusted with a volume knob. A wireless transmitter may contain an adjustment knob to adjust the transmission frequency or other transmission parameters. Visual information output is provided via LCD display, LED display, or outputs to a standard visual display device. The mobile playback device 212 contains a limited quantity of non-volatile memory, RAM, and ROM. Digital information content, configuration data, and operating code are stored in the memory space of the mobile playback device 212. Configuration data includes but is not limited to: public and private IDs, content playback parameters, and user interface parameters. The use of non-volatile memory allows portions of the digital information content, configuration data, and firmware to be updated via download. Both digital information content and firmware (operating software) is stored in this memory device. Portions of the firmware and configuration information are stored permanently in a read only memory (ROM). An internal memory allocation method is used to track the content of mobile playback device 212 memory. This allocation method, in conjunction with segment navigation data 218, also provides the means for locating desired digital information, program, configuration data, or header data resident in the mobile playback device 212 memory. The mobile playback device 212 includes an interface to the client computer system 214 through which the mobile playback device 212 receives compressed digital information files 216, software updates, and configuration changes from client computer system 214.

Downloading Digital Information Content, Software Updates, or Configuration Information From the Library Server to the Client Computer System

The client browser software 219 of client computer system 214 operates in cooperation with library management software 261 of library server 260 and the firmware resident on the mobile playback device 212 to provide a means by which a consumer may browse, preview, select, purchase, and take delivery of selected digital information content from digital information library server 260 across distribution network 240. The digital information content is typically downloaded to the client computer system 214 at the time of purchase, but it is possible to download digital information content either, 1) sometime after the purchase, or 2) multiple times after an initial purchase. The client browser 219 can be configured to download content to client computer system 214 without user intervention. In addition, portions of the client computer system 214 software itself or mobile playback device 212 resident software/firmware may be downloaded or updated from library server 260. The mobile playback device 212 resident software/firmware is downloaded through client computer system 214. If library server 260 has an updated or more recent copy of client computer system 214 software or mobile playback device 212 software/firmware, the library server copy is downloaded to replace the outdated version of the corresponding client computer system 214 software or mobile playback device software 212.

The software is encrypted, scrambled, and digitally signed in a manner similar to the scrambling and delivery of the digital information files. Changes to the ID list, audio prompts, and other configuration data for playback device 212 can be downloaded in a manner similar to the downloading of software updates from library server 260.

The preferred embodiment utilizes three authentication processes to protect the transfer of information from server 260 to client system 214 and playback device 212. First, a point-to-point authentication protocol is performed whereby the library server 260 must verify that the requesting client computer system 214 is an authorized client and the client computer system 214 must verify that the library server 260 is an authorized provider. Secondly, a targeting protocol is performed whereby the library server 260 utilizes a set of identifiers (i.e. player IDs) for mobile playback devices 212 authorized to receive the selected download data from library server 260. The mobile playback device identifiers are provided by client computer system 214 or are referenced from user profiles stored on library server 260. In the targeting process, library server 260 formats and downloads data that can only be read by mobile devices 212 with these identifiers. Thirdly, a library server digital signature is appended to the downloaded data for use by the mobile playback device 212 to verify that the downloaded data was originated by an authorized library server. These three authentication processes of the present invention are described in detail in the following sections.

Point-to-Point Authentication Protocol

The library server 260, client computer system 214, and mobile playback devices 212 each have a unique verification sequence which is used to verify the authenticity of another system. In communications between library server 260 and client system 214, both systems alternately act to (1) request verification of the other system and (2) provide an authenticating response to a verification request. Communication between mobile devices 212 and client computer system 214 use a similar authentication protocol, as well as real-time communication between mobile devices 212 and library server 260 via client system 214. This verification sequence comprises a pre-defined set of bit streams or data structures which are sent by the requesting system (i.e. the system requesting verification) to the receiving system being authenticated (i.e. the respondent) in a point-to-point transmission. The receiving system must respond to the verification sequence in a pre-defined manner by sending particular response bit streams or data structures to the requesting system. If the appropriate response data from the respondent is received by the requesting system, the system being verified is considered an authorized system. Conversely, the system being verified is considered unauthorized if the appropriate response data is not received by the requesting system prior to a pre-defined time-out period. Both systems begin communication by acting as requesters and respondents in separate verification cycles. Upon completion of these

point-to-point authentication cycles, further client/server processing only continues if both systems deem each other to be authorized systems.

In an alternate embodiment, point-to-point authentication is used in a subset of the communications among library server 260, client computer system 214, and mobile playback devices 212. In another embodiment, point-to-point authentication is not used and system security rests on the use of targeting and/or digital signature authentication.

Targeting Protocol

The targeting protocol of the present invention is a means and method for limiting the playback of digital information content, the adjustment of player configuration data, and the download of player operating code to a specified player 212/226 or a specified set of mobile playback devices 212. Each player 212/226 contains a unique player ID 223. The player ID 223 comprises a public player ID and a private player ID. The public player ID is a unique identifier and serves as a serial number for player identification. The private player ID is used to target data for individual mobile playback devices 212. Private player IDs are never sent through any communications link or network path, except during installation. In the preferred embodiment, private player IDs should be sufficiently diverse, but need not be unique.

Mobile playback devices 212 may be logically grouped together using a Group ID. Digital information content, software, or configuration data changes may be targeted to a group of mobile playback devices 212 defined by a group ID. Each player 212/226 includes memory space for storage of one or more group IDs 225 of which the particular player 212/226 is a member. Each group ID includes a public portion and a private portion, each of which is equivalent to the public and private player IDs, respectively. Each group is identified by a uniquely valued public ID that is not shared with other player or group IDs. Digital information content, software, or configuration data can be targeted to a particular group ID in the same way as it would be targeted for a specific player ID. Mobile playback devices 212 in the same group share the same Group ID. A particular Group ID is pre-defined as the global group to which all mobile playback devices 212 are a member. Mobile playback devices 212 may be members of more than one group. A particular player 212/226 is added to a new group by appending the new group ID to the set of group IDs 225 maintained in the particular player 212/226. The new group ID is appended after the server 260 provides a public group ID and a group key to the player 212/226 via client computer system 214. The player 212/226 generates a private group ID from the combination of the group key and the mobile playback device's 212 private player ID. As with the private player ID, the private group ID is never sent through any communications link or network path, except during installation. In an alternative embodiment, players receive the group private ID directly or by combining the group key with the players public ID or other known numeric value. In another

alternative embodiment, the private group ID is not used in the targeting process and is not transferred to the player. The group assignment process may be restricted to using real-time communications between server 260 and the player via client system 214, or it may take place sometime after group assignments have been downloaded to client system 214. Having described the player IDs and group IDs defined in the present invention, the use of these IDs in the targeting protocol is described next.

Library server 260 includes a player ID table 266 as shown in Figure 2. Player ID table 266 includes a storage area for private IDs and public IDs. The private IDs are pre-loaded into player table 266 when a new mobile playback device is installed into the system or when a new group is established. In another embodiment, ID table 266 is a mathematical function which converts group or player public IDs. Public player and group IDs are sent by a client computer system 214 to the server 260 when the client computer system 214 desires to target a particular player 212/226 or set of mobile playback devices 212 to a particular specified digital information, software content, or configuration data selection. Digital information selection is made from the files 262 stored on library server 260. Software or configuration data selection is made from files stored on server 260 or from data generated upon request by server 260. Software content and configuration data is prepared and scrambled in a manner similar to the authoring process for digital information content. Once an association is made by client computer system 214 between a set of targeted public IDs and the associated data to be transferred from server 260, library server 260 creates a targeted header for the selected files. The library management software 261 consults the public ID to private ID table 266 to locate the corresponding targeted private ID(s). The targeted header comprises a combination of the descrambling map 322 from the selected files with the private player IDs corresponding to the targeted mobile playback devices 212. The descrambling map 322 is thereby encrypted using the secret IDs of the targeted mobile playback device(s) 212. This targeted header is linked with the corresponding digital information or software content of the selected file in a network transport ready data block. A digital signature is applied to the data block as described below in connection with the data signature protocol. Transport integrity data (such as the use of checksums or cyclic redundancy check) is applied to the data block and the data block is sent to the client computer system 214 via network 240. Because the data block can only be unscrambled using the corresponding descrambling block 322 in its header and because the descrambling block 322 was combined (i.e. encrypted) with a private ID known only by the targeted mobile playback device(s) 212, only the targeted mobile playback device(s) 212 will be able to unscramble and read the data block. The selected digital information, software content, and configuration data is thereby targeted to a particular set of mobile playback devices 212.

For small groups of mobile playback devices 212, each targeted header of a digital

information file may contain a plurality of descrambling maps, each associated with a different player 212/226. In this manner, multiple mobile playback devices 212 can read a single file 220 stored on the client computer system 214.

A person of ordinary skill in the art will note that alternative methods of targeting exist. In an alternative embodiment, library server 260 uses the targeted recipient's private player 212/226 identifier or the targeted group's private group identifier to generate scrambling map 316. Descrambling map 322 is not stored with the file as it is already known by the recipient player or group. This method targets content to a single player 212/226 or group and achieves the identical result of preventing unauthorized playback of content.

In another alternative embodiment, library server 260 does not scramble the digital information content or uses a known key to scramble the digital information content. In this embodiment, descrambling map 322 is unnecessary and is not stored with the file. Either the public or private player 212/226 identifier can be stored in the header for targeting identification purposes. Upon receipt of data from library server 260, the player 212/226 checks if its player 212/226 identifier or group identifier is included in the header. This method assumes unmodified mobile playback devices 212 and achieves the identical result of preventing unauthorized playback of content.

In another alternative embodiment, the player IDs for the targeted mobile playback devices 212 are sent to the library server 260 by the client computer system 214 when the user registers with the library server 260 to obtain the user's client ID. In this alternative embodiment, these player IDs are stored on the library server 260 in a user profile. In this embodiment, the library server 260 manages the player IDs for the targeted mobile playback devices 212.

Digital Signature Protocol

The third authentication protocol used in the present invention is the digital signature protocol. For selected data blocks generated by library server 260 and downloaded to a client computer system 214, library server 260 uses its private library key 263 to apply a digital signature to the data block. The digital signature comprises a known bit string or data pattern which is combined with the data in data blocks that are downloaded from library server 260 to client computer system 214. The library server 260 may perform this operation on all the data blocks or a selected subset of the data blocks. After a data block is downloaded to a player 212/226 through a client computer system 214, the player 212/226 can retrieve the digital signature applied by the library server 260 using a public server key known to the player 212/226. The player 212/226 can thereby verify that the data block originated with an authorized library server 260. The public server key is also known to client computer system 214, which can perform the identical operation to verify that the data block originated with an authorized library

server 260. In this embodiment, library server 260 performs signatures on the content. A person of ordinary skill in the art would realize that the signatures may also be performed on the digital information by authoring system 280. The signatures may also be performed in a multiple step process shared by authoring system 280 and library server 260.

In an alternate embodiment, digital signatures are applied to downloaded material by a trusted client computer system 214. In another alternate embodiment, digital signatures are not applied to downloaded material and system security rests on the use of targeting and/or point-to-point authentication.

Downloading Digital Information Content, Software Updates, or Configuration Information From the Client Computer System to the Mobile Playback Device

In a first step, the client computer system 214 and the mobile device use the point-to-point authentication protocol described above to verify that an authorized mobile playback device 212 is communicating with an authorized client computer system 214. If this is the case, the mobile playback device 212 transmits its memory map to the client computer system 214 via the mobile device interface 221. A table of contents defining the available digital information files 220 and player configuration profiles resident in client computer system 214 is displayed along with the mobile playback device 212 memory map for a user of client computer system 214. The user selects which files 220 of client computer system 214 should replace portions or segments of specified mobile playback device 212 memory as defined by the mobile playback device 212 memory map. Alternately, client browser 219 can be configured to automatically perform this selection process. In either case, the user is prevented from selecting digital information content larger than the available memory of playback device 212. In addition, control software and/or configuration data for playback device 212 may be automatically updated by client computer 214. The specified digital information files 220, associated headers, operating code, or configuration data are thereafter downloaded into mobile playback device 212 memory. The mobile playback device 212 uses checksums to verify the integrity of the download. The mobile playback device 212 uses the server public key 215, the header, and the digital signature to authenticate the download as described above. The header descrambling map is used by targeted mobile playback devices 212 to unscramble the downloaded data. In other embodiments, mobile playback device 212 may unscramble the downloaded data and/or decompress the downloaded data before authenticating the signature. Each segment of the digital information content may be independently authenticated and validated using any of the techniques described above. Digital information prompts on the mobile playback device 212 guide the user to the desired portion of the

downloaded digital information content as specified by the table of contents residing in the header of the downloaded data. The user may preview selected portions of the digital information content by selecting a preview option. The preview option plays a predetermined portion of a selected digital information program. Upon selection of a particular digital information program, the selected digital information program is played for the user after the mobile playback device 212 converts the digital information content into sound or displayable imagery which is played through an audio output means or displayed on a display device.

The software player 226 of client computer system 214 may also receive digital information content in approximately the same form as the digital information content downloaded to the mobile playback device 212; however, the digital information content for the software player 226 does not need to be downloaded to the software player 226. The software player 226 has direct access to the digital information content; because, it shares memory and/or disk storage space with the client computer system 214. Therefore, there are no downloading or memory map concerns. In the same manner as the mobile playback device 212, the software player 226 performs digital signature verification, verification of checksums, and receiving targeted information. In an alternative embodiment, software player 226 may use a communication protocol similar to that of mobile playback device 212 when receiving digital information content, configuration information, and dynamically downloaded software.

Figure 4 illustrates an alternative embodiment of the present invention. As shown in Figure 4, authoring system 280 can support a plurality of library servers 260. Each library server can be configured to support a specific type of digital information content. In the same manner described above, the client computer systems 214 access network 240 and obtain digital information content from any of the library servers 260 after performing the authentication process described above. Authorization server 270 is provided for this purpose. The configuration illustrated in Figure 4 provides a more distributed architecture thereby dispersing the load across several server platforms. A site with many client computer systems 214 may have its own library server 260 to reduce demand on network 240. This architecture scales well as the number of client computer systems 214 grows and the content provided by the library server 260 grows.

Figure 5 illustrates another embodiment of the present invention except the library server 461 has been implemented as a plurality of separate processes or tasks 460 running concurrently on a single library server platform 461. Each library server process 460 services requests for access to its corresponding portion of the digital information content. This content is created using authoring system 280 in the manner described above. The authorization server 270 is used to validate the links between the client computer systems 214 and the library server processes 460. The configuration illustrated in Figure 5 is advantageous in that the convenience of a single server is maintained while the scalability of multiple libraries is also supported.

This concept can also be used for the authoring and authorization servers 280 and 270, respectively. As shown in Figure 6, the authoring system 280 and the authorization server 270 is implemented on a single platform 685 as authoring process 680 and authorization process 670. These processes perform the same functions as described above, except the implementation provides the convenience of a single server and the scalability of multiple processes for the authoring and authorization tasks.

Figure 7 illustrates yet another alternative embodiment wherein the client computer systems 214 include a local library 710. The local library 710 provides a local storage area and library access control functionality which provides access to a subset of the archived digital information from library server 260. In the manner described above, the user of a client computer system 214 identifies the titles or items of digital information in library server 260 that the user wishes to access. In the preferred embodiment, these content selections are transferred to a client storage area 220 (as shown in Figure 2) for subsequent downloading to mobile playback device 212. The embodiment shown in Figure 7 expands upon the client storage area 220 and creates a local library 710. The local library 710 is used for storage of selected content; but also for searching, sorting, categorizing, and abstracting the locally stored content. The local library 710 allows a client computer system 214 to maintain a small subset of the full library which may be used to create custom collections of content in a variety of user selected configurations. Client systems 214 may be permitted to access the contents of local libraries 710 on other client systems 214. In a related alternate embodiment, library server processes 460 may also reside on selected client systems 214. This embodiment allows client systems 214 to browse and purchase content that is scrambled, targeted, and delivered from library server process 460 executing on a locally positioned client system 214. By maintaining the library locally, a portion of the network access and transfer overhead is eliminated.

Figure 8 illustrates another alternative embodiment of the present invention wherein the client computer system 214 is eliminated and the mobile playback device 212 is connected directly to the network 240 through network interface 810. In the preferred embodiment, the mobile playback device 212 is a **minimal capability device primarily dedicated to playing audio files or displaying visual images or text on a display device.** The mobile playback device 212 is minimally configured to retain its **light-weight, low cost, and readily mobile features.** The preferred embodiment does not therefore include the use of a portable personal computer or laptop computer, because, such devices typically do not meet the light-weight and low cost constraints of the preferred mobile playback device 212. However, the minimal mobile playback device 212 may be augmented to add network interface 810 which comprises a conventional hardware connector, hardware buffers and controllers, and firmware support for a particular conventional network protocol. For example, the mobile playback device 212 may be augmented with an integrated

modem that includes a telephone jack with which the playback device may be connected to a telephone network. It will be apparent to those of ordinary skill in the art that network interface 810 may be implemented in a low cost and light-weight device such as mobile playback device 212. Because the client system browser 219 would not be available in the alternative embodiment shown in Figure 8, a simplified user interface may be provided in firmware or other non-volatile memory of mobile playback device 212 with which the user may select items of digital information for download and playback from library server 260. As described above, the authentication process to validate the link between the mobile playback device 212 and the library server 260 must also be performed prior to user access to the library server 260 content. Alternatively, a client system 814 coupled to network 240 may be provided to support client browser 219 and thereby enable selection of items of digital information for download and playback from library server 260 directly to any of the mobile playback devices 212. Client systems 814 may support local storage of digital information, software, and configuration data in a form similar to storage space 220 or local library 710. In addition, a more simplified implementation of network interface 810 may be designed to communicate via network 240 to client system 814 instead of library server 260.

In another alternative embodiment of the present invention, digital information programming selections are made using the client computer system 214 and library server 260 as described above; however, the selections are delivered on mass storage medium 241. Mass storage medium 241 represents any of a variety of conventional mass storage technologies including CD-ROM, PCMCIA cards, DVDs, floppy disks, removable hard drives, digital magnetic tape, optical cards, flash memory or other optical, magnetic, electronic, or semiconductor memory devices. Upon selection by a user of a client computer system 214, selected programming is targeted and scrambled as described above and transferred to a selected mass storage medium 241 and mailed, hand-delivered, or held for pickup by the user. Once the user takes physical possession of the selected mass storage media 241, the selected programming may be read from the mass storage medium 241 by the client browser 219 and thereafter transferred to the mobile playback device 212 as described above. Figure 9 illustrates another embodiment of the system that does not include the use of client computer 214 to transfer data to mobile playback device 212. Kiosk 910 consists of a computer system such as the one described above in Figure 1. Kiosk 910 is a publicly accessible unit that can perform browse, content purchase, and download functions in a manner equivalent to a client computer system 214. The kiosk 910 is special because it contains its own library server for fast local access and download of content. Kiosk 910 contains a mobile device interface 221, a special version of client browser 219, and local library server process 460. Kiosk library server process 460 has local storage of scrambled and compressed digital information files 262. These compressed information files 262 originate from remote authoring system 280 and may be delivered via physical transport of mass

23

storage media 241 or via distribution network 240. A customer operates client browser 219 to browse, select, and purchase digital information files that are delivered to the customer's mobile playback device 212. Authentication, targeting, and download processes are performed within the kiosk by library server process 460 that is connected to remote authorization server 270 over network 240. In a related embodiment, figure 7 shows a client system 214 with local library 710 that can be converted into a kiosk with functionality similar to kiosk 910. In this system, a special version of client browser 219 provides the same user functionality as the previous kiosk embodiment.

An alternate embodiment of the system uses a common communication network to connect all system components. In Figure 10, network 240 is directly coupled to client system 214 and 814, network interface(s) 810, library server(s) 260, authorization server 270, and authoring system(s) 280. One of ordinary skill in the art will realize that network 240 can also be segmented into a number of independent networks or communication links without changing the functionality of the system.

Thus, a method and apparatus for implementing a computer network based digital information library system employing authentication and encryption protocols for the secure transfer of digital information library programs, software, and configuration data to a client computer system and a mobile digital information playback device removably connectable to the client computer system is disclosed. Although the present invention has been described with respect to specific examples and subsystems, it will be apparent to those of ordinary skill in the art that the invention is not limited to these specific examples or subsystems but extends to other embodiments as well. The present invention includes all of these other embodiments as specified in the claims that follow.

CLAIMS

We claim:

1. A computer based library and information delivery system for accessing and obtaining selected digital information files, said library and information delivery system comprising:

a library server having a plurality of digital information files;

a client computer system coupled to said library server over a network; and

a mobile device removably connectable to said client computer system, said client computer system including logic for requesting a download of a selected one or more of said digital information files from said library server, said client computer system further including logic for downloading said selected one or more of said digital information files to said mobile device.

2. The library and information delivery system as claimed in Claim 1 further including an authoring system coupled to said library server for generating or modifying said plurality of digital information files.

3. The library and information delivery system as claimed in Claim 1 wherein said plurality of digital information files includes audio files, spoken audio files, visual image files, text files, video files, multimedia files, operating code files, or configuration information files.

4. The library and information delivery system as claimed in Claim 1 wherein said library server further includes library management software for interfacing with said client computer system and said plurality of digital information files.

5. The library and information delivery system as claimed in Claim 1 wherein said client computer system further includes a client browser for interfacing with said library server and for making selections of one or more of said digital information files from said library server.

6. The library and information delivery system as claimed in Claim 1 wherein said client computer system further includes a player for tangibly playing said selected one or more of said digital information files on said client computer system.

7. The library and information delivery system as claimed in Claim 1 wherein said mobile device further includes a means for tangibly playing said selected one or more of said digital information files downloaded from said client computer system.

8. The library and information delivery system as claimed in Claim 1 further including an authorization server coupled to said library server for authorizing access to said plurality of digital information files by said client computer system.

9. The library and information delivery system as claimed in Claim 1 wherein said library server is a software process running on several computer systems.

10. The library and information delivery system as claimed in Claim 2 wherein said library server and said authoring system run on different computer systems.

11. The library and information delivery system as claimed in Claim 8 wherein said library server and said authorization server run on different computer systems.

12. The library and information delivery system as claimed in Claim 1 further including an authoring system coupled to said library server for generating or modifying said plurality of digital information files, said library and information delivery system further including an authorization server coupled to said library server for authorizing access to said plurality of digital information files by said client computer system, said library and information delivery system running on a single computer system.

13. The library and information delivery system as claimed in Claim 1 further including an authoring system coupled to said library server for generating or modifying said plurality of digital information files, said library and information delivery system further including an authorization server coupled to said library server for authorizing access to said plurality of digital information files by said client computer system, said authoring system and said authorization server running on a different computer system than said library server.

14. The library and information delivery system as claimed in Claim 1 wherein said client computer system further includes a local library for local storage of a selected portion of said plurality of digital information files.

15. The library and information delivery system as claimed in Claim 1 wherein said mobile device further includes a network interface for direct communication with a network without the aid of a client computer system.

16. The library and information delivery system as claimed in Claim 1 wherein said logic for downloading further includes logic for limiting said download based on available memory of said mobile device.

17. The library and information delivery system as claimed in Claim 1 wherein said logic for downloading further includes logic for performing authentication on each segment of said digital information files downloaded to said mobile device.

18. The library and information delivery system as claimed in Claim 1 wherein said client computer system further includes logic for previewing said digital information files prior to being downloaded to said mobile device.

27

19. The library and information delivery system as claimed in Claim 1 further including authentication logic for authenticating access to said library, said authentication logic including a means for performing a point-to-point authentication protocol.

20. The library and information delivery system as claimed in Claim 1 further including authentication logic for authenticating access to said library, said authentication logic including a means for performing a targeting authentication protocol.

21. The library and information delivery system as claimed in Claim 1 further including authentication logic for authenticating access to said library, said authentication logic including a means for performing a digital signature authentication protocol.

22. In a computer based library and information delivery system, said library and information delivery system including a library server having a plurality of digital information files, a client computer system coupled to said library server over a network, and a mobile device removably connectable to said client computer system, a method for accessing and obtaining selected digital information files comprising the steps of:

requesting a download of a selected one or more of said digital information files from said library server; and

downloading said selected one or more of said digital information files to said mobile device.

23. The method as claimed in Claim 22 further including a step of generating or modifying said plurality of digital information files.

24. The method as claimed in Claim 22 wherein said plurality of digital information files includes audio files, spoken audio files, visual image files, text files, video files, multimedia files, operating code files, or configuration information files.

25. The method as claimed in Claim 22 further including a step of activating library management software for interfacing with said client computer system and said plurality of digital information files.

26. The method as claimed in Claim 22 further including a step of interfacing with said library server and for making selections of one or more of said digital information files from said library server.

27. The method as claimed in Claim 22 further including a step of tangibly playing said selected one or more of said digital information files on said client computer system.

28. The method as claimed in Claim 22 further including a step of tangibly playing said selected one or more of said digital information files downloaded from said client computer system.

29. The method as claimed in Claim 22 further including a step of authorizing access to said plurality of digital information files by said client computer system.

30. The method as claimed in Claim 22 further including the steps of generating or modifying said plurality of digital information files, and authorizing access to said plurality of digital information files by said client computer system, said library and information delivery system running on a single computer system.

31. The method as claimed in Claim 22 further including a step of locally storing a selected portion of said plurality of digital information files.

29

32. The method as claimed in Claim 22 further including a step of directly communicating with a network without the aid of a client computer system.

33. The method as claimed in Claim 22 further including a step of limiting said download based on available memory of said mobile device.

34. The method as claimed in Claim 22 further including a step of performing authentication on each segment of said digital information files downloaded to said mobile device.

35. The method as claimed in Claim 22 further including a step of previewing said digital information files prior to being downloaded to said mobile device.

36. The method as claimed in Claim 22 further including a step of performing a point-to-point authentication protocol.

37. The method as claimed in Claim 22 further including a step of performing a targeting authentication protocol.

38. The method as claimed in Claim 22 further including a step of performing a digital signature authentication protocol.

B. FIELDS SEARCHED
 Minimum documentation searched (classification system followed by classification symbols)
 U.S. : 395/200.31, 200.32, 200.47, 200.48, 200.49; 345/327, 156, 169; 705/26, 27

Documentation searched other than minimum documentation to the extent that such documents are included in the fields searched

Electronic data base consulted during the international search (name of data base and, where practicable, search terms used)
 Please See Extra Sheet.

C. DOCUMENTS CONSIDERED TO BE RELEVANT

Category*	Citation of document, with indication, where appropriate, of the relevant passages	Relevant to claim No.
Y	US 5,440,336 A (BUHRO et al.) 08 August 1995, col.4 lines 49-60.	1-38
Y,P	US 5,634,080 A (KIKINIS et al.) 27 May 1997, fig.47, 48	1, 22
Y,P	US 5,579,471 A (BARBER et al) 26 November 1996. col.3 lines 39-68.	5-9 18, 25-28
A	RAMANATHAN ET AL. "Architectures for personalized multimedia", IEEE Multimedia, 1994, all	1-38
Y	DESMEDT ET AL. "Multi-receivier / Multi-sender network security", INFOCOM '92, p.2045-2054	19-21, 35-38

Further documents are listed in the continuation of Box C. See patent family annex.

* Special categories of cited documents:	*T* later document published after the international filing date or priority date and not in conflict with the application but cited to understand the principle or theory underlying the invention
A document defining the general state of the art which is not considered to be of particular relevance	*X* document of particular relevance; the claimed invention cannot be considered novel or cannot be considered to involve an inventive step when the document is taken alone
B earlier document published on or after the international filing date	*Y* document of particular relevance; the claimed invention cannot be considered to involve an inventive step when the document is combined with one or more other such documents, such combination being obvious to a person skilled in the art
L document which may throw doubts on priority claim(s) or which is cited to establish the publication date of another citation or other special reason (as specified)	*A* document member of the same patent family
O document referring to an oral disclosure, use, exhibition or other means	
P document published prior to the international filing date but later than the priority date claimed	

Date of the actual completion of the international search 25 NOVEMBER 1997	Date of mailing of the international search report 30 JAN 1998

PRELIMINARY AMENDMENT I

Sir:

Before publishing and examining this patent application, please amend the application as follows:

In the Claims

Claim 1 (canceled).

2. (New) A method of customizing a wireless telephone by programming a video file into the wireless telephone for use as an indicia of an incoming communication the method comprising:

connecting to a remote database that includes a plurality of lists of video files;

TRANSMITTAL LETTER

Sir:

Transmitted herewith: a Preliminary Amendment;
 a Declaration; a Supplemental Information Disclosure
Statement; substitute specification; an Associate Power
of Attorney; formal drawings; to be filed in the above-
identified patent application.

FEE FOR ADDITIONAL CLAIMS

- A fee for additional claims is not required.
 A fee for additional claims is required.

The additional fee has been calculated as shown below:

	CLAIMS REMAINING AFTER AMENDMENT		HIGHEST NUMBER PREVIOUSLY PAID FOR		PRESENT EXTRA		RATE		EXTRA FEES
TOTAL CLAIMS	82	-	20	*	=	62	X	\$9	= \$ 558.00
INDEPENDENT CLAIMS	10	-	3	**	=	7	X	\$43	= \$ 301.00
FIRST PRESENTATION OF A MULTIPLE DEPENDENT CLAIM								+ \$145	= \$ 0.00

- * If less than 20, insert 20.
** If less than 3, insert 3.

TOTAL \$ 859.00

[X] A check in the amount of \$ 859.00 is transmitted herewith.

EXTENSION FEE

[] The following extension is applicable to the Response filed herewith; [] \$55.00 extension fee for response within first month pursuant to 37 C.F.R. § 1.17(a)(1); [] \$210.00 extension fee for response within second month pursuant to 37 C.F.R. § 1.17(a)(2); [] \$475.00 extension fee for response within third month pursuant to 37 C.F.R. § 1.17(a)(3); [] \$740.00 extension fee for response within fourth month pursuant to 37 C.F.R. § 1.17(a)(4).

[] A check in the amount of [] \$55.00; [] \$210.00; [] \$475.00; [] \$740.00; in payment of the extension fee is transmitted herewith. A duplicate copy of this transmittal letter is transmitted herewith.

SUPPLEMENTAL IDS FEE

[] A check in the amount of \$ 0.00 is transmitted herewith in payment of the Supplemental IDS fee pursuant to 37 C.F.R. § 1.17 (p).

A handwritten signature in black ink, appearing to read "Michael Shanahan".

 Claire Spintil-Van Goodman

- Enc.
- Preliminary Amendment 1
 - Check for \$ 859.00

allowing a user of the wireless telephone to browse at least one of the lists of video files;

allowing the user of the wireless telephone to select at least one of the video files from the browsed list;

optionally reviewing the selected video file before downloading the selected video into the wireless telephone;
and

allowing the user to optionally download the selected video file for use as an indicia of an incoming communication.

3. (New) The method of claim 2 wherein the format of the selected video file is from the group comprising: JPEG, MPEG, GIF, AVI, or DVD.

4. (New) The method of claim 2 further comprising allowing the user to search the remote database for a certain desired video file using title or description information to aid in locating the desired video file.

5. (New) The method of claim 4 wherein the searching further comprises searching the Internet or other remote databases for the desired video file.

6. (New) The method of claim 2 wherein the browsing of video files is accomplished at least in part using a Wireless Application Protocol (WAP) compliant system.

7. (New) The method of claim 2 further comprising providing a visual indication on a display screen of the wireless telephone to confirm the selected video file has been successfully downloaded.

8. (New) The method of claim 2 further comprising:
downloading a selected video file into the wireless telephone; and
associating the downloaded video file with a characteristic indicative of a caller such that the associated video file plays when the indicative characteristic is received by the wireless telephone.

9. (New) The method of claim 2 wherein the characteristic indicative of the caller is the caller's telephone number.

10. (New) A method of customizing a wireless telephone by programming a video file into the wireless telephone for use as an indicia of an incoming communication, the method comprising:
connecting to a remote database that includes a plurality of video files;
allowing the user of the wireless telephone to browse and select at least one of the video files;

allowing the user to optionally download the selected video file into a programmable memory for use as an indicia of an incoming communication.

11. (New) The method of claim 10 further comprising allowing the user to optionally review the selected video file before downloading the selected video file into the wireless telephone.

12. (New) The method of claim 10 wherein the format of the selected video file is from the group comprising: JPEG, MPEG, GIF, AVI, or DVD.

13. (New) The method of claim 10 further comprising allowing the user to search the remote database for a certain desired video file using title or description information to aid in locating the desired video file.

14. (New) The method of claim 13 wherein the searching further comprises searching the Internet or other remote databases for the desired video file.

15. (New) The method of claim 10 wherein the browsing of video files is accomplished at least in part using a Wireless Application Protocol (WAP) compliant system.

16. (New) The method of claim 10 further comprising providing a visual indication on a display screen of the wireless telephone to confirm the selected video file has been successfully downloaded.

17. (New) The method of claim 10 further comprising:
downloading a selected video file into the wireless telephone; and

associating the downloaded video file with a characteristic indicative of a caller such that the associated video file plays when the indicative characteristic is received by the wireless telephone.

18. (New) The method of claim 10 wherein the characteristic indicative of the caller is the caller's telephone number.

19. (New) A wireless telephone that may be customized by programming a video file into the wireless telephone for use as an indicia of an incoming communication, the telephone comprising:

a communications link capable of connecting to a remote database that includes a plurality of lists of video files;

a display screen that allows a user of the wireless telephone to browse at least one of the lists of video files and view selectable video files present in the browsed list;

a speaker, display screen, and processing circuitry configured to allow the user to optionally review a selected video file before downloading the selected video file into the wireless telephone; and

a programmable memory circuit for allowing the user to optionally store the selected video file for use as an indicia of an incoming communication.

20. (New) The wireless telephone of claim 19 wherein the programmable memory circuit is configured to store video files in a format selected from the group comprising: JPEG, MPEG, GIF, AVI, or DVD.

21. (New) The wireless telephone of claim 19 wherein the speaker, display screen and processing circuitry is configured to play video files in a format selected from the group comprising: JPEG, MPEG, GIF, AVI, or DVD.

22. (New) The wireless telephone of claim 19 wherein the wireless telephone is configured to allow the user to search the remote database for a certain desired video file using title or description information to aid in locating the desired video file.

23. (New) The wireless telephone of claim 22 wherein the wireless telephone is configured to search the Internet or other remote databases for the desired video file.

24. (New) The wireless telephone of claim 19 wherein the wireless telephone includes a Wireless Application Protocol (WAP) compliant Internet browser.

25. (New) The wireless telephone of claim 19 configured to provide a visual indication on the display screen of the wireless to confirm the selected video file has been successfully downloaded.

26. (New) The wireless telephone of claim 19 configured to allow the user to associate a downloaded video file with a characteristic indicative of a caller such that the associated video file plays when the indicative characteristic is received by the wireless telephone.

27. (New) The method of claim 19 wherein the characteristic indicative of the caller is the caller's telephone number.

28. (New) A wireless telephone that may be customized by programming a video file into the wireless telephone for use as an indicia of an incoming communication, the telephone comprising:

a communications link capable of connecting to a remote database that includes a plurality of lists of video files;

a display screen that allows a user of the wireless telephone to browse at least one of the plurality of lists of video files and view selectable video files present in the browsed list;

processing circuitry configured to receive a selected video file from the communications link; and

a programmable memory circuit for allowing the user to optionally store the selected video file for use as an indicia of an incoming communication.

29. (New) The wireless telephone of claim 28 wherein the display screen operates in conjunction with the processing circuitry to allow the user to optionally review a selected video file before downloading the selected video file into the wireless telephone.

30. (New) The wireless telephone of claim 28 wherein the programmable memory circuit is configured to store video files in a format selected from the group comprising: JPEG, MPEG, GIF, AVI, or DVD.

31. (New) The wireless telephone of claim 28 wherein the display screen and processing circuitry is configured to play video files in a format selected from the group comprising: JPEG, MPEG, GIF, AVI, or DVD.

32. (New) The wireless telephone of claim 28 wherein the wireless telephone is configured to allow the user to search the remote database for a certain desired video file using title or description information to aid in locating the desired video file.

33. (New) The wireless telephone of claim 32 wherein the wireless telephone is configured to search the Internet or other remote databases for the desired video file.

34. (New) The wireless telephone of claim 28 wherein the wireless telephone includes a Wireless Application Protocol (WAP) compliant Internet browser.

35. (New) The wireless telephone of claim 28 configured to provide a visual indication on the display screen to confirm the selected video file has been successfully downloaded.

36. (New) The wireless telephone of claim 28 configured to allow the user to associate a downloaded video file with a characteristic indicative of a caller such that the associated video file plays when the indicative characteristic is received by the wireless telephone.

37. (New) A wireless telephone that may be customized by programming a video file into the wireless

telephone for use as an indicia of an incoming communication, the telephone comprising:

means for connecting to a remote database that includes a plurality of lists of video files;

means for browsing at least one of the lists of video files;

means for selecting at least one of the video files from the browsed list;

means for optionally reviewing the selected video file before downloading the selected video into the wireless telephone; and

means for downloading the selected video file for use as an indicia of an incoming communication.

38. (New) The wireless telephone of claim 37 further comprising means for searching the remote database for a certain desired video file using title or description information to aid in locating the desired video file.

39. (New) The wireless telephone of claim 38 wherein the searching further comprises means for searching the Internet or other remote databases for the desired video file.

40. (New) The wireless telephone of claim 37 further comprising means for providing a visual indication on a display screen of the wireless telephone to confirm the selected video file has been successfully downloaded.

41. (New) The wireless telephone of claim 37 further comprising means for associating a downloaded video file with a characteristic indicative of a caller such that the associated video file plays when the indicative characteristic is received by the wireless telephone.

42. (New) A wireless telephone that may be customized by programming an video file into the wireless telephone for use as an indicia of an incoming communication, the telephone comprising:

means for connecting to a remote database that includes a plurality of video files;

means for browsing and selecting at least one of the video files;

means for optionally downloading the selected video file into a programmable memory for use as an indicia of an incoming communication.

43. (New) The wireless telephone of claim 42 further comprising means for optionally reviewing the selected video file before downloading the selected video file into the wireless telephone.

44. (New) The wireless telephone of claim 43 further comprising means for searching the remote database for

a certain desired video file using title or description information to aid in locating the desired video file.

45. (New) The wireless telephone of claim 42 wherein the searching further comprises means for searching the Internet or other remote databases for the desired video file.

46. (New) The wireless telephone of claim 42 wherein the browsing of video files is accomplished at least in part using a Wireless Application Protocol (WAP) compliant system.

47. (New) The wireless telephone of claim 42 further comprising providing a visual indication on a display screen of the wireless telephone to confirm the selected video file has been successfully downloaded.

48. (New) The wireless telephone of claim 42 further comprising means for associating a downloaded video file with a characteristic indicative of a caller such that the associated video file plays when the indicative characteristic is received by the wireless telephone.

49. (New) The method of claim 2 further comprising preventing the unauthorized distribution of a downloaded video file.

50. (New) The method of claim 2 further comprising playing an audio portion the selected video file, if any, through an enhanced performance speaker capable of providing a substantially full range of sounds from the played video file.

51. (New) The method of claim 2 characterized by the use of a personal computer to perform the browsing step.

52. (New) The method of claim 2 further comprising providing the user with an opportunity to edit the selected video file.

53. (New) The method of claim 2 further comprising providing an indication that a memory capacity of the wireless telephone has been exceeded if the size of the video file to be downloaded is larger than available memory space in the wireless telephone.

54. (New) The method of claim 53 further comprising providing the user of the wireless telephone with the opportunity to cancel or modify a download request associated with an video file download operation if the size of the video file to be downloaded is larger than available memory space in the wireless telephone.

55. (New) The wireless telephone of claim 28 wherein the wireless telephone is configured to prevent the

unauthorized distribution of an video file stored in the programmable memory circuit.

56. (New) The wireless telephone of claim 29 further comprising an enhanced performance speaker capable of providing a substantially full range of audio sounds from an audio portion of the selected video file.

57. (New) The wireless telephone of claim 28 configured to provide an indication that a memory capacity of the wireless telephone has been exceeded if the size of the video file to be downloaded is larger than available memory space in the wireless telephone.

58. (New) The wireless telephone of claim 57 configured to provide the user of the wireless telephone with the opportunity to cancel or modify a download request associated with an video file download operation if the size of the video file to be downloaded is larger than the available memory space in the wireless telephone.

59. (New) A wireless telephone that may be customized by programming an video file into the wireless telephone for use as an indicia of an incoming communication, the telephone comprising:

means for connecting to a remote database that includes a plurality of video files;

means for selecting at least one of the video files from the database;

means for downloading and storing the selected video file for use as an indicia of an incoming communication; and

means for preventing the unauthorized distribution of a selected video file stored in the wireless telephone.

60. (New) The wireless telephone of claim 59 further comprising means for indicating that a memory capacity of the wireless telephone has been exceeded if the size of the video file to be downloaded is larger than available memory space in the wireless telephone.

61. (New) A wireless telephone that may be customized by searching for and selecting an video file from a remote computer and programming the selected video file into the wireless telephone for use as an indicia of an incoming communication, the telephone comprising:

a communications link capable of connecting to a database in the remote computer that comprises a plurality of lists of video files in JPEG, MPEG, GIF, AVI, or DVD format;

a display screen and a mobile Internet browser that allows a user of the wireless telephone to browse at least one of the plurality of lists of video files and view selectable video files present in the browsed list;

processing circuitry configured to receive a selected one of the video files from the communications link;

a programmable memory circuit for allowing the user to optionally store the selected video file for use as an indicia of an incoming communication; and

an enhanced performance speaker capable of providing a substantially full range of audio sounds from an audio portion of the JPEG, MPEG, GIF, AVI, or DVD files when one of the stored video files is played as an indicia of an incoming communication.

62. (New) The wireless telephone of claim 61 configured to provide an indication that a memory capacity of the wireless telephone has been exceeded if the size of the video file to be downloaded is larger than available memory space in the wireless telephone.

63. (New) The wireless telephone of claim 61 wherein the display screen operates in conjunction with the enhanced performance speaker and processing circuitry to allow the user to optionally review a selected video file before downloading the selected video file into the wireless telephone.

64. (New) The wireless telephone of claim 61 configured to allow the user to search the remote database for a certain desired video file using title or description information to aid in locating the desired video file.

65. (New) The wireless telephone of claim 61 configured to prevent the unauthorized distribution of an video file stored in the programmable memory circuit.

66. (New) A wireless telephone that may be customized by searching for and selecting an video file from a remote computer and programming the selected video file into the wireless telephone for use as an indicia of an incoming communication, the telephone comprising:

a communications link capable of connecting to a database in the remote computer that includes a plurality of video files;

a display screen and a browsing application program that allows a user of the wireless telephone to browse the video files and select at least one video file therefrom;

processing circuitry configured to supervise receipt of a selected video file from the communications link;

a programmable memory circuit for allowing the user to optionally store the selected video file for use as an indicia of an incoming communication; and

an enhanced performance speaker capable of providing a substantially full range of audio sounds that may be associated with the selected video file when the selected video file is played as an indicia of an incoming communication.

67. (New) The wireless telephone of claim 66 wherein the video file is selected from the group comprising JPEG, MPEG, GIF, AVI, or DVD files.

68. (New) The wireless telephone of claim 66 wherein the display screen operates in conjunction with the enhanced performance speaker and processing circuitry to allow the user to optionally review the selected video file before downloading the selected video file into the programmable memory circuit of the wireless telephone.

69. (New) The wireless telephone of claim 66 configured to prevent the unauthorized distribution of the selected video file stored in the programmable memory circuit.

70. (New) The wireless telephone of claim 63 configured to provide the user of the wireless telephone with the option of downloading the selected video file into a programmable memory in the wireless telephone after reviewing the selected video file.

71. (New) The wireless telephone of claim 70 configured to provide the user of the wireless telephone with the option of editing the selected video file before programming the selected video file into the programmable memory in the wireless telephone.

72. (New) The wireless telephone of claim 65 wherein the wireless telephone is configured to operate in conjunction with copyright protection software to prevent the unauthorized distribution of the selected video file stored in the programmable memory circuit.

73. (New) The wireless telephone of claim 68 configured to provide the user of the wireless telephone with the option of downloading the selected video file into a programmable memory in the wireless telephone after reviewing the selected video file.

74. (New) The wireless telephone of claim 73 configured to provide the user of the wireless telephone with the option of editing the selected video file before programming the selected video file into the programmable memory in the wireless telephone.

75. (New) The wireless telephone of claim 69 wherein the wireless telephone is configured to operate with copyright protection software to prevent the unauthorized distribution of the selected video file stored in the programmable memory circuit.

76. (New) A wireless telephone that may be customized by searching for and selecting an video file from a remote computer and programming the selected video file into

the wireless telephone for use at a time specified by a user, of the telephone, comprising:

a communications link capable of connecting to a database in the remote computer that includes a plurality of video files;

a display screen and a browsing application program that allows a user of the wireless telephone to browse the video files and select at least one video file therefrom;

processing circuitry configured to supervise receipt of a selected video file from the communications link;

a programmable memory circuit for allowing the user to optionally store the selected video file for use at a time specified by the user; and

an enhanced performance speaker capable of providing a substantially full range of audio sounds that may be associated with the selected video file when the selected video file is played.

77. (New) The wireless telephone of claim 76 wherein the video file is selected from the group comprising JPEG, MPEG, GIF, AVI, or DVD files.

78. (New) The wireless telephone of claim 76 wherein the display screen operates in conjunction with the enhanced performance speaker and processing circuitry to allow the user to optionally review the selected polyphonic video file before

downloading the selected video file into the programmable memory circuit of the wireless telephone.

79. (New) The wireless telephone of claim 76 configured to prevent the unauthorized distribution of the selected video file stored in the programmable memory circuit.

80. (New) The wireless telephone of claim 78 configured to provide the user of the wireless telephone with the option of downloading the selected video file into a programmable memory in the wireless telephone after reviewing the selected video file.

81. (New) The wireless telephone of claim 80 configured to provide the user of the wireless telephone with the option of downloading the selected video file into a programmable memory in the wireless telephone after reviewing the selected video file.

82. (New) The wireless telephone of claim 81 configured to provide the user of the wireless telephone with the option of editing the selected video file before programming the selected video file into the programmable memory in the wireless telephone.

REMARKS

These amendments more particularly point out and define the invention. An early and favorable action on this patent application is requested.

Respectfully submitted,

FIRST SUPPLEMENTAL INFORMATION DISCLOSURE STATEMENT

Sir:

In accordance with 37 C.F.R. §§ 1.56 and 1.97, applicants wish to call the attention of the Examiner to the documents cited in the Supplemental Information Disclosure Statement (IDS) filed herewith. Because these references are being cited in this case before the mailing date of the Office Action on the merits, pursuant to 37 C.F.R. § 1.97(b)(3), applicant believes no fee is due in connection with this Supplemental IDS.

(54) Title: METHOD FOR IMPLEMENTING A SOUND MESSAGE SEND/RECEIVE SERVICE IN A TELECOMMUNICATION NETWORK

(57) Abstract

The present invention concerns a method for sending a sound or musical tune message from a service user terminal device (1) or, alternatively, on the service user's request, to the terminal device (2) of another subscriber in short-message format. The method is adapted implementable by means of a mobile phone and/or a PC connected to a telecom network (3). According to the invention, the subscriber wishing to send a musical tune message selects the desired musical tune from the information displayed on his terminal device (1) and then selects the directory number or connection code of the recipient, whereupon said message is sent to the recipient's terminal device (2). In conjunction with the receipt of said musical tune message at the recipient(s) terminal (2), the sender's name and/or directory number, together with a possible text message, are displayed to the recipient. Hereupon, the recipient may activate said musical tune message and hear it and, if so desired, store the same in his terminal device (2) or, optionally, send the same to the terminal device of a third party.

Method for implementing a sound message send/receive service in a telecommunication network

The invention relates to a method according to the preamble of claim 1.

5

The invention also relates to a mobile phone, a service center and a terminal device suitable for implementing the method according to the invention.

It is an object of the invention to provide a method for sending a sound message (a
10 tune) from a subscriber terminal device 1 or, alternatively, on a request sent therefrom, in a short-message format to a terminal device 2 owned by another subscriber. It is a further object of the invention to provide a technique for storing said sound message in a subscriber terminal device as the alarm signal of the terminal device's alarm clock.

15

In the art are known a method and system in which the connection data associated with a service provider or a service, such as the name, connection code, etc., are selected and activated in the subscriber's terminal device and, subsequently, are sent to the system switching center or to the recipient's terminal device or account. Also a
20 method and system are known featuring the possibility of delivering messages comprised of successive tones or a text (such as short messages) to a subscriber terminal device or, vice versa, from the terminal device. Such embodiments are described, e.g., in FI patent applications no. FI 945,075, FI 962,553 and FI 962,961. On the basis of cited method, also systems have been developed in which the system
25 switching center (server) has ring tones (e.g., popular music samples) stored therein so that a mobile phone subscriber can retrieve said ring tones into his mobile phone through the steps of reading a code (e.g., BVAZSAEP), e.g., from the service provider's www pages, by entering the code into his own terminal device and then sending said code as a short message to the short-message server/center, where the
30 subscriber is identified and, based on said code, the ring tone ordered by the subscriber is sent to his mobile telephone. Next, the subscriber can play the delivered

ring tone and store it in his mobile phone's selection of ring tones, whereupon it can be used only as a ring tone. The implementation of this embodiment is possible in, e.g., mobile phone types Nokia 6110, 6150, 8810, 8110i and 9000i, however, without the possibility of retransmitting the received ring tone to another subscriber or using
5 the same as the alarm signal of the mobile phone's alarm clock. Such a service provider can be found by contacting, e.g., Radiolinja's Jukebox service at <http://jukehoksi.radiolinja.fi> or Sonera's Doris service at <http://www.sonera.fi/nmt-gsm/doris/aanivalitsin.html>.

10 The basic concept of these ring tone services is that a subscriber can order a desired ring tone from a service provider, whereby the ring tone data is sent only to his personal mobile phone, wherein it can be used as a ring tone for incoming calls.

For some time, the service centers of telecom operators have also offered voice mail
15 systems in which a subscriber can leave a voice message to the voice mail center, whereupon the destination party known as B-subscriber has been provided with the possibility of hearing said message by calling the voice mail center. Systems based on this concept operate so that, after receiving a voice mail message, the voice mail center sends the destination subscriber a message informing that one voice mail
20 message has been received at the voice mail center. Then, the destination subscriber calls the voice mail center, receives instructions and enters his password, whereupon he is authorized to listen to the voice-mail messages addressed to him.

A shortcoming of this arrangement is that no musical tune messages or melodic ring
25 tones can be transmitted to another subscriber from the ordering pages of the service provider's www site or from the subscriber's personal terminal device. A further shortcoming is that the sending subscriber cannot *a priori* know whether the other subscriber has a terminal device suitable for receiving a melodic voice mail message.

30 It is an object of the invention to provide a feature service allowing a subscriber to send by means of his terminal device a musical tune message (MT) to another

subscriber's terminal, by means of which device the musical tune message can be listened to, stored and/or retransmitted to the terminal device of a third party.

5 A further shortcoming of conventional techniques is that the alarm clock signal of a terminal device has been controllable only by the owner of the terminal device, whereby alarm signal information defined by others than the terminal device owner has been impossible to emit via the alarm clock device or in the same fashion as by an alarm clock.

10 The goal of the invention is achieved by providing a telecom network with a facility to deliver ring tones and the like particularly as a musical tune message to the terminal device of another subscriber. The invention is particularly characterized in that the sending party (e.g., the A-subscriber) is offered the possibility of sending a musical tune message (MT) to the terminal device of the another party later called
15 the B-subscriber. A preferred embodiment of the invention is also characterized in that the message received by a subscriber terminal device may also be used as the alarm signal of the terminal device's alarm clock.

Particularly advantageously, the musical tune message is played to the subscriber
20 either from the alarm signal device at the loudness of the terminal device's alarm clock or from the earphone of a hands-free set at a sound pressure above the normal setting.

More specifically, the method according to the invention is characterized by the
25 specifications disclosed in the characterizing part of claim 1.

The mobile phone according to the invention is characterized by what is stated in the characterizing part of claim 15.

30 The service center according to the invention is characterized by what is stated in the characterizing part of claim 16.

The terminal device according to the invention is characterized by what is stated in the characterizing part of claim 17.

5 The invention has significant benefits. Instead of a mere voice mail message or text message, the user of the invention can send another subscriber of a short-message service a musical tune message (MT), whereby an unexpected type of novel feature service is offered to mobile phone users and service providers.

10 In the following, the invention is described in more detail with reference to appended drawings in which

Fig. 1 is a block diagram illustrating the equipment and system associated with the service; and

15

Figs. 2A and 2B show a flow diagram illustrating the send/receive arrangements of a musical tune message in two alternative embodiments.

Referring to the block diagram of Fig. 1, the invention described herein relates to a
20 method for sending a voice mail message or musical tune message (MT) with the help of a subscriber terminal device 1 to the terminal device 2 of another subscriber. The method is applicable in a telecom network 4, part of which is formed by a musical tune message center 3, wherefrom the user by means of his terminal device can select a desired musical piece 5, then submit the directory number of the recipient's
25 terminal device 2 and thus send the musical piece to the recipient's terminal device 2, whose display subsequently indicates the greetings or other message received from the sender. Next, the recipient can after storage and/or activation of the received musical or voice-mail message listen to the same, store the same in his terminal device 2 and use the same as a ring tone, the alarm signal of the alarm clock of the
30 terminal device or retransmit the same to a third party.

As shown in Fig. 1 and Fig. 2A, the process according to the invention begins from block 10, followed by block 11 in which the A-subscriber opens with the help of his terminal device 1 the www page of a musical tune message center MTPK 3 maintained by a service provider such as a telecom operator, where the stored musical pieces are selectable by certain codes/names and are so arranged that the A-subscriber 1 can enter in a certain field the mobile phone directory number (e.g., 050-5066728) of the recipient's (B-subscriber) terminal device 2. After the A-subscriber has entered the directory number of the B-subscriber 2 and selected his favourite musical piece, he can give the "send" command (by a certain keystroke or icon, etc.) that in block 12 sends the musical tune message to the B-subscriber's mobile phone 2 over the telecom network 4. The B-subscriber's terminal device 2 indicates the greeting/message associated with the musical tune message as a short message (e.g., as text "*With love from me*") on the display of the terminal device 2. The B-subscriber can store and/or activate the musical tune message, as well as listen to or store the same in his terminal device as is known from the listening and storing technique of ring tones. Before the desired musical tune message (MT) is sent to the B-subscriber's terminal device 2, MTPK 3 checks in block 13 the compatibility of B-subscriber's terminal device 2. If the check result is "YES", MTPK 3 sends in block 15 the musical tune message (MT) to the B-subscriber's terminal device 2. If the result is "NO", MTPK 3 reports in block 14 the situation to the A-subscriber via his terminal device 1. Next, the B-subscriber's terminal device in block 16 indicates the message transmitted along with the received MT. At his will, the B-subscriber can activate the MT in block 17 and hear it.

Fig. 2B illustrates an alternative process in which the A-subscriber enters, after the start block 18, into his own mobile phone 1 the code of the desired musical piece stored in the musical tune message service center 3 and/or the name thereof (e.g., "BVAZSAEP" and/or "Holy night") and in block 19 the mobile phone directory number of the B-subscriber, and sends the information as a short message to the service provider's service center 3, where the message is checked in block 20 and, when necessary, checks in block 21 whether the B-subscriber has a compatible

terminal device and, subsequently, the ordered musical tune message is sent in block 23 to the B-subscriber's terminal device 2. If MTPK cannot retrieve sufficient data on the type of the B-subscriber's terminal device (e.g., because the B-subscriber may be a client of another network and therefore data on his terminal device is not available in the network, or some other reason prevents access to the needed data), MTPK sends a report on such a shortcoming to the A-subscriber and gives in block 22 the A-subscriber a choice whether or not to send the ordered musical tune message MT to the B-subscriber. Then, A-subscriber can decide whether to send the ordered MT to the B-subscriber although no firm information has been obtained on the existence of a compatible terminal device on the B-subscriber side. This choice can save the A-subscriber from unnecessary costs. Nevertheless, the A-subscriber can order the musical tune message MT to be sent to his own mobile phone 1 and then retransmit the message to the B-subscriber's terminal device 2 by dialing the B-subscriber's directory number. The user's terminal device (1, 2) contains all the necessary means for retransmitting the musical tune message to another subscriber or for storing the musical tune message into the alarm signal selection of the alarm clock of his terminal device.

MTPK may include a short-message center, an intelligent network or a portion of these facilities or, alternatively, comprise a www server or the like equipment.

Instead of a musical tune message, also a synthesized sound message may be used as the ordered message. Hence, the scope and spirit of the invention also covers synthesized sound sequences that cannot be categorized as music or speech in a strict sense.

A sound message is typically played from the alarm signal device of the terminal at a sound pressure approximately equal to that of the alarm signal proper.

Accordingly, at least the following alternatives are possible according to the invention:

The B-subscriber may be provided with a facility allowing the musical tune message, which is sent by the A-subscriber or, respectively, ordered by the A-subscriber to be sent, to be stored in his terminal device 2 or the smart card thereof (such as the SIM
5 card) and use the content of the message as the ring tone of his terminal device 2, alarm signal of his terminal device alarm clock or retransmit the message to a third party.

Service billing can be arranged according to the invention so that the A-subscriber is
10 billed by the service center 3 or a billing facility (such as a billing center) operating therewith for a musical tune message sent to the B-subscriber or, alternatively, a sufficient payment (e-cash) must be sent from the A-subscriber's terminal device in conjunction with the sending of the musical tune message to the account of the service center and/or the due party to receive the payment such as the service provider.

15 It is also possible to complement the billing of the musical tune message service by allowing the service center 3 or the billing center operating therewith to cater to the artists' royalty payments so that the latter will be paid in conjunction with the musical tune message transmission or thereafter to the artists' royalty payment account.

20 The invention also concerns a mobile phone 1, 2 to be used in conjunction with the use of the method according to the invention, said mobile phone including means for reception, storage and playing as well as retransmission of said sound message to the terminal device of a third party.

25 Furthermore, the invention concerns a service center comprising means for storage, reception and sending of musical tune messages, as well as means for receiving and/or storing the (B-subscriber) directory number of the recipient of the musical tune message, whereby said service center 3 also includes means for receiving the
30 code/name of the musical tune message and the destination B-subscriber directory number submitted from the A-subscriber's terminal device 1 so that said service

center is capable of sending the musical tune message selected by the A-subscriber 1 to the terminal device 2 of the B-subscriber.

5 While the invention has been described above by making reference to one of its preferred embodiment, those skilled in the art will find a plurality of modifications possible within the inventive spirit and scope of the appended claims.

What is claimed is:

1. Method for sending a message to the terminal device (2) of a mobile phone subscriber in a telecom network (4), said network incorporating a service center (3) wherein the subscriber identity is verified if necessary, characterized in that the sending party (e.g., the A-subscriber) is provided with a facility to send another terminal device (2) (e.g., the B-subscriber) a sound message (such as a musical tune message, MT) that can be listened to at least essentially at the same loudness as the normal alarm signal emitted by said terminal device (2).
5
2. Method according to claim 1, characterized in that the message to be sent comprises a preselectable musical piece.
10
3. Method according to claim 1, characterized in that the message to be sent comprises a preselectable sampled or synthesized sound message.
15
4. Method according to any of claims 1-3, characterized in that the identity of the client (1) ordering the service and/or the recipient of the message or his terminal device (2) is verified if necessary from a service code and/or directory number and/or name/code.
20
5. Method according to claim 1, characterized in that the sending client is provided with a facility to select a desired sound message and enter the directory number of the B-subscriber on a www service page furnished by said service center (3) so that said www service page is displayed on the sending client's terminal device (1).
25
6. Method according to claim 1, characterized in that the client (1) is provided with a facility to send the code and/or name of said desired musical tune message, together with the B-subscriber directory number, to said musical tune message service center (3), wherein the data of the B-subscriber and the compatibili-
30

ty of the B-subscriber's terminal device are verified if necessary, after which the musical tune message ordered by said client is sent to the B-subscriber (2), the B-subscriber's terminal device (2) indicates the receipt of the musical tune message by displaying a text telling that said musical tune message has been received and, if so arranged, displays the sending party's text message (e.g., "With love"), and finally
5 the B-subscriber can hear said musical tune message by activating/storing the same and, when so desired, retransmit the same to the terminal device of a third mobile phone user.

10 7. Method according to claim 1, characterized in that sending said musical tune message (MT) may be allowed from both the service client's terminal device (1) as well as from said service center (3) to the terminal device (2) of the B-subscriber in a short-message format.

15 8. Method according to any of foregoing claims, characterized in that the mobile phone (1 or 2) used in the method is allowed to receive, store, play and retransmit a musical tune message sent thereto.

9. Method according to any of foregoing claims, characterized in that the
20 recipient's terminal (2) is allowed to receive and play the musical tune message sent thereto immediately after the receipt thereof without any action from the user's side.

10. Method according to any of foregoing claims for sending and/or receiving musical tune messages via such a telecom network that incorporates a service center (3) or
25 a data base (5) associated therewith, said data base containing therein in a stored format a plurality of music or sound messages or musical tune samples, together with their codes, names and the like data, characterized in that said service center and/or said data base (3) is arranged so that the names and codes of the musical tune messages are sent to the service user's terminal device (1) and are displayed thereon,
30 together with a field serving for the entry of the recipient's directory number therein, whereby the service user can submit the recipient's directory number in the field and

select the desired musical tune message and send the same directly from the service center to the B-subscriber's terminal device (2).

5 11. Method according to any of foregoing claims, characterized in that the A-subscriber is provided with a facility of entering the code and/or name of a musical tune message, together with the B-subscriber's mobile phone directory number, to send said data to said service center (3), wherein the necessary operations are carried out to send said desired musical tune message to said B-subscriber.

10 12. Method according to any of foregoing claims, characterized in that the B-subscriber is provided with a facility allowing the musical tune message, which is sent by the A-subscriber (1) or, respectively, ordered by the A-subscriber to be sent, to be stored in his terminal device (2) or the smart card thereof (such the SIM card) and, subsequently, use the content of the message as the ring tone of his terminal
15 device (2).

13. Method according to any of foregoing claims, characterized in that the A-subscriber is billed by the service center (3) or a billing facility (such as a billing center) operating therewith for a music sample message or a musical tune message
20 sent to the B-subscriber or, alternatively, a sufficient payment (e-cash) is required to be sent from the A-subscriber's terminal device in conjunction with the sending of said music sample message or said musical tune message to the account of the service center (3) and/or the due party to receive the payment such as the service
25 provider.

14. Method according to any of foregoing claims, characterized in that the billing of the musical tune message service performed in conjunction with the sending of said message at said service center (3) or said billing center operating therewith takes into account the artists' royalty payments so that the latter will be
30 paid in conjunction with the musical tune message transmission or thereafter to the artists' royalty payment account.

15. Mobile phone (1, 2) suitable for use in the method according to any of foregoing claims, c h a r a c t e r i z e d in that said mobile phone (1, 2) includes means for reception, storage and playing as well as retransmission of said sound message to the
5 terminal device (2) of another subscriber.

16. Service center (3) suitable for use in the method according to any of foregoing claims, c h a r a c t e r i z e d in that said service center comprises means for storage, reception and sending of musical tune messages, as well as means for receiving
10 and/or storing the (B-subscriber) directory number of the recipient of the musical tune message, whereby said service center (3) also includes means for receiving the code/name of the musical tune message and the destination B-subscriber directory number submitted from the A-subscriber's terminal device (1) so that said service center is capable of sending the musical tune message selected by the A-subscriber
15 (1) to the terminal device (2) of the B-subscriber.

17. Terminal device suitable for use in the method according to any of foregoing claims, c h a r a c t e r i z e d in that said terminal device (1 or 2) includes means facilitating the service user to store the received musical tune message into a format
20 serving as the alarm signal of terminal device's alarm clock and to select and/or change said tune to serve as the alarm signal of the alarm clock.

**2.7V SUPPLY 14-BIT LINEAR CODEC
 WITH HIGH-PERFORMANCE AUDIO FRONT-END**

PRELIMINARY DATA

FEATURES:
Complete CODEC and FILTER system including:

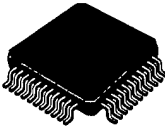

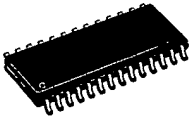

- 14 BIT LINEAR ANALOG TO DIGITAL AND DIGITAL TO ANALOG CONVERTERS.
- 8 BIT COMPANDED ANALOG TO DIGITAL AND DIGITAL TO ANALOG CONVERTERS A-LAW OR μ -LAW.
- TRANSMIT AND RECEIVE BAND-PASS FILTERS
- ACTIVE ANTIALIAS NOISE FILTER.

Phone Features:

- THREE SWITCHABLE MICROPHONE AMPLIFIER INPUTS. GAIN PROGRAMMABLE: 20 dB PREAMP. (+MUTE), 0 . . 22.5 dB AMPLIFIER, 1.5 dB STEPS.
- EARPIECE AUDIO OUTPUT. ATTENUATION PROGRAMMABLE: 0 . . 30 dB, 2 dB STEPS.
- EXTERNAL AUDIO OUTPUT. ATTENUATION PROGRAMMABLE: 0 . . 30 dB, 2 dB STEPS.
- TRANSIENT SUPPRESSION SIGNAL DURING POWER ON AND DURING AMPLIFIER SWITCHING.
- INTERNAL PROGRAMMABLE SIDETONE CIRCUIT. ATTENUATION PROGRAMMABLE: 16 dB RANGE, 1 dB STEP. ROUTING POSSIBLE TO BOTH OUTPUTS.
- INTERNAL RING OR TONE GENERATOR INCLUDING DTMF TONES, SINEWAVE OR SQUAREWAVE WAVEFORMS. ATTENUATION PROGRAMMABLE: 27dB RANGE, 3dB STEP. THREE FREQUENCY RANGES:
 - a) 3.9Hz 996Hz, 3.9Hz STEP
 - b) 7.8Hz 1992Hz, 7.8Hz STEP
 - c) 15.6Hz 3984Hz, 15.6Hz STEP
- PROGRAMMABLE PULSE WIDTH MODULATED BUZZER DRIVER OUTPUT.

General Features:

- SINGLE 2.7V to 3.6V SUPPLY
- EXTENDED TEMPERATURE RANGE OPERATION (*) -40°C to 85°C.
- 1.5 μ W STANDBY POWER (TYP. AT 3.0V).
- 15mW OPERATING POWER (TYP. AT 3.0V).
- 13mW OPERATING POWER (TYP. AT 2.7V).
- CMOS COMPATIBLE DIGITAL INTERFACES.
- PROGRAMMABLE PCM AND CONTROL INTERFACE MICROWIRE COMPATIBLE.

			
TQFP44(10x10x1.4)	SO28		
ORDERING NUMBERS:			
	Package	Dim.	Cond.

APPLICATIONS:

- GSM DIGITAL CELLULAR TELEPHONES.
- CT2 DIGITAL CORDLESS TELEPHONES.
- DECT DIGITAL CORDLESS TELEPHONES.
- BATTERY OPERATED AUDIO FRONT-ENDS FOR DSPs.

(*) Functionality guaranteed in the range - 40°C to +85°C;
 Timing and Electrical Specifications are guaranteed in the range - 30°C to +85°C.

GENERAL DESCRIPTION

ST5092 is a high performance low power combined PCM CODEC/FILTER device tailored to implement the audio front-end functions required by the next generation low voltage/low power consumption digital terminals.

ST5092 offers a number of programmable functions accessed through a serial control channel that easily interfaces to any classical microcontroller.

The PCM interface supports both non-delayed (normal and reverse) and delayed frame synchronization modes.

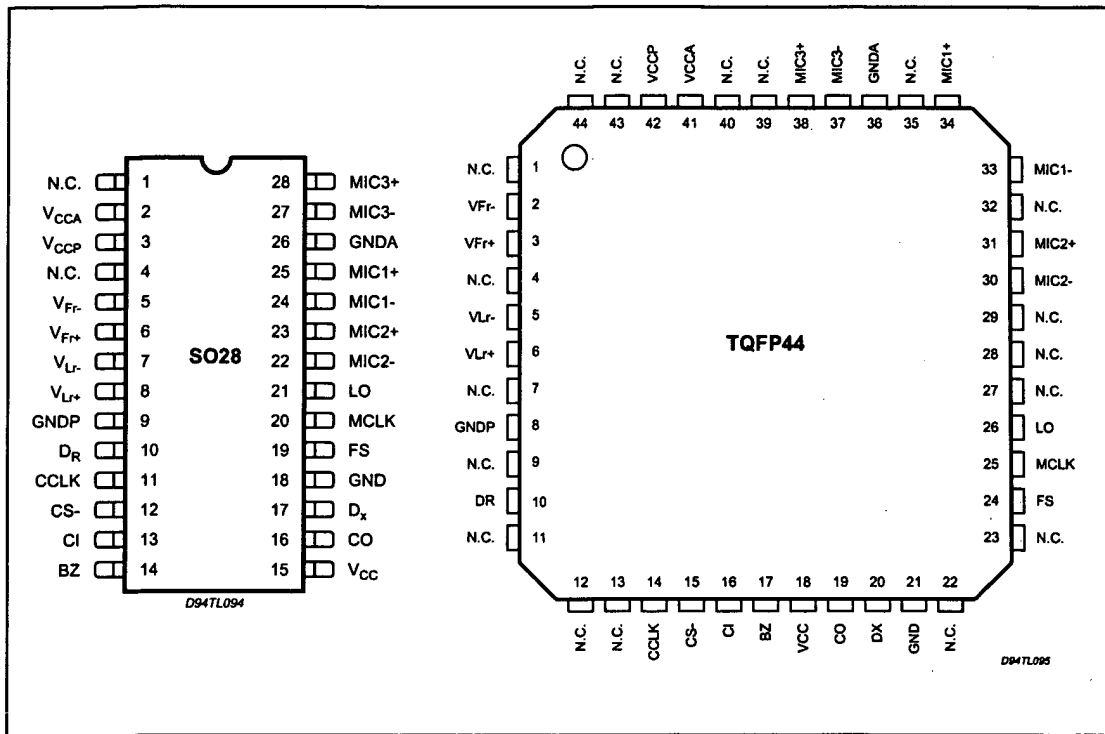

ST5092 can be configured either as a 14-bit linear or as an 8-bit companded PCM coder.

Additionally to the CODEC/FILTER function, ST5092 includes a Tone/Ring/DTMF generator, a sidetone generation, and a buzzer driver output.

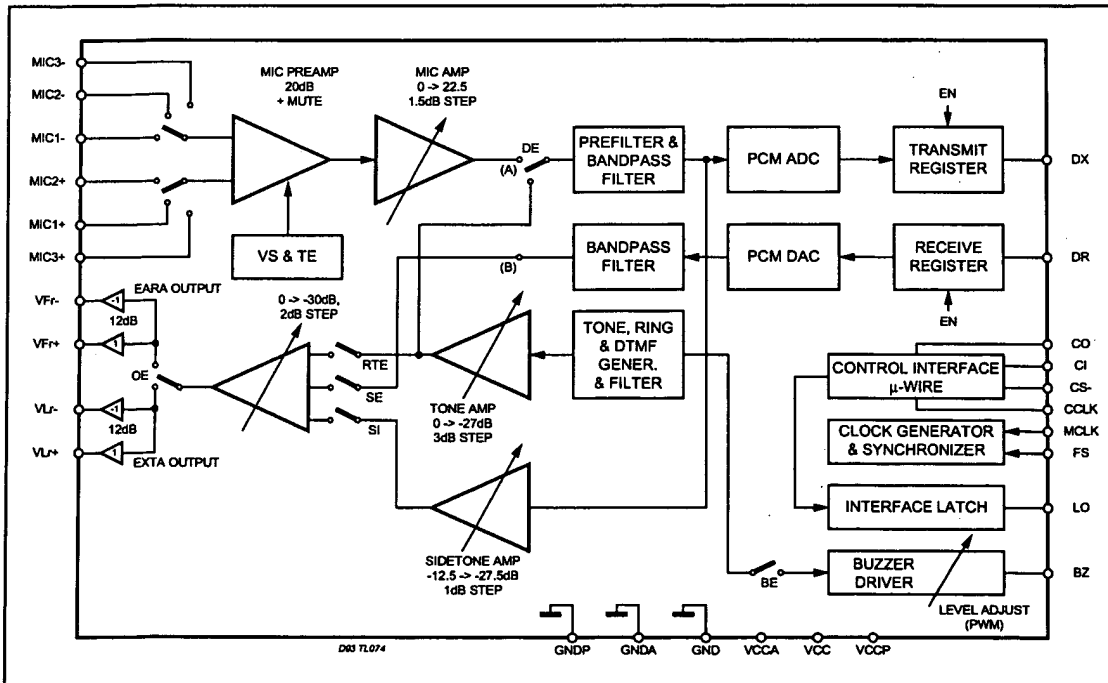

ST5092 fulfills and exceeds D3/D4 and CCITT recommendations and ETSI requirements for digital handset terminals.

Main applications include digital mobile phones, as cellular and cordless phones, or any battery powered equipment that requires audio codecs operating at low single supply voltages

PIN CONNECTIONS (Top view)

BLOCK DIAGRAM

PIN FUNCTIONS (SO28)

Pin	Name	Description
1	N.C.	Not Connected.
2	V _{CCA}	Positive power supply input for the analog section. V _{CC} and V _{CCA} must be directly connected together.
3	V _{CCP}	Positive power supply input for the power section. V _{CCP} and V _{CC} must be connected together.
4	N.C.	Not Connected.
5,6	V _{FR+} , V _{FR-}	Receive analog earpiece amplifier complementary outputs. These outputs can drive directly earpiece transducer. The signal at this output can be the sum of: - Receive Speech signal from D _R , - Internal Tone Generator, - Sidetone signal.
7,8	V _{LR+} , V _{LR-}	Receive analog extra amplifier complementary outputs. The signal at these outputs can be the sum of: - Receive Speech signal from DR, - Internal Tone generator, - Sidetone signal.
9	GNDP	Power ground. V _{FR} and V _{LR} driver are referenced to this pin. GNDP and GND must be connected together close to the device.
10	D _R	Receive data input: Data is shifted in during the assigned Received time slots. In delayed and non-delayed normal frame synchr. modes voice data byte is shifted in at the MCLK frequency on the falling edges of MCLK, while in non-delayed reverse frame synchr. mode voice data byte is shifted in at the MCLK frequency on the rising edges of MCLK.
11	CCLK	Control Clock input: This clock shifts serial control information into CI and out from CO when the CS- input is low, depending on the current instruction. CCLK may be asynchronous with the other system clocks.
12	CS-	Chip Select input: When this pin is low, control information is written into and out from the ST5092 via CI and CO pins.
13	CI	Control data Input: Serial Control information is shifted into the ST5092 on this pin when CS- is low on the rising edges of CCLK.
14	BZ	Pulse width modulated buzzer driver output.
15	V _{CC}	Positive power supply input for the digital section.
16	CO	Control data Output: Serial control/status information is shifted out from the ST5092 on this pin when CS- is low on the falling edges of CCLK.
17	D _X	Transmit Data output: Data is shifted out on this pin during the assigned transmit time slots. Elsewhere D _X output is in the high impedance state. In delayed and non-delayed normal frame synchr. modes, voice data byte is shifted out from TRISTATE output D _X at the MCLK on the rising edge of MCLK, while in non-delayed reverse frame synchr mode voice data byte is shifted out on the falling edge of MCLK.
18	GND	Ground: All digital signals are referenced to this pin.
19	FS	Frame Sync input: This signal is a 8kHz clock which defines the start of the transmit and receive frames. Any of three formats may be used for this signal: non delayed normal mode, delayed mode, and non delayed reverse mode.
20	MCLK	Master Clock Input: This signal is used by the switched capacitor filters and the encoder/decoder sequencing logic. Values must be 512 kHz, 1.536 MHz, 2.048 MHz or 2.56 MHz selected by means of Control Register CRO. MCLK is used also to shift-in and out data.
21	LO	A logic 1 written into DO (CR1) appears at LO pin as a logic 0 A logic 0 written into DO (CR1) appears at LO pin as a logic 1.
22	MIC2-	Second negative high impedance input to transmit pre-amplifier for microphone connection.
23	MIC2+	Second Positive high impedance input to transmit pre-amplifier for microphone connection.
24	MIC1-	Negative high impedance input to transmit pre-amplifier for microphone connection.
25	MIC1+	Positive high impedance input to transmit pre-amplifier for microphone connection.
26	GNDA	Analog Ground: All analog signals are referenced to this pin. GND and GNDA must be connected together close to the device.
27	MIC3-	Third negative high impedance output to transmit preamplifier for microphone connection.
28	MIC3+	Third positive high impedance output to transmit preamplifier for microphone connection.

ST5092

PIN FUNCTIONS (TQFP44)

Pin	Name	Description
1	N.C.	Not Connected.
2,3	V _{FR+} , V _{FR-}	Receive analog earpiece amplifier complementary outputs. These outputs can drive directly earpiece transducer. The signal at this output can be the sum of: - Receive Speech signal from DR, - Internal Tone Generator, - Sidetone signal.
4	N.C.	Not Connected.
5,6	V _{LR+} , V _{LR-}	Receive analog extra amplifier complementary outputs. The signal at these outputs can be the sum of: - Receive Speech signal from DR, - Internal Tone generator, - Sidetone signal.
7	N.C.	Not Connected.
8	GNDP	Power ground. V _{FR} and V _{LR} driver are referenced to this pin. GNDP and GND must be connected together close to the device.
9	N.C.	Not Connected.
10	DR	Receive data input: Data is shifted in during the assigned Received time slots. In delayed and non-delayed normal frame synchr. modes voice data byte is shifted in at the MCLK frequency on the falling edges of MCLK, while in non-delayed reverse frame synchr. mode voice data byte is shifted in at the MCLK frequency on the rising edges of MCLK.
11,12,13	N.C.	Not Connected.
14	CCLK	Control Clock input: This clock shifts serial control information into CI and out from CO when the CS- input is low, depending on the current instruction. CCLK may be asynchronous with the other system clocks.
15	CS-	Chip Select input: When this pin is low, control information is written into and out from the ST5092 via CI and CO pins.
16	CI	Control data Input: Serial Control information is shifted into the ST5092 on this pin when CS- is low on the rising edges of CCLK.
17	BZ	Pulse width modulated buzzer driver output.
18	V _{CC}	Positive power supply input for the digital section.
19	CO	Control data Output: Serial control/status information is shifted out from the ST5092 on this pin when CS- is low on the falling edges of CCLK.
20	Dx	Transmit Data output: Data is shifted out on this pin during the assigned transmit time slots. Elsewhere Dx output is in the high impedance state. In delayed and non-delayed normal frame synchr. modes, voice data byte is shifted out from TRISTATE output Dx at the MCLK on the rising edge of MCLK, while in non-delayed reverse frame synchr mode voice data byte is shifted out on the falling edge of MCLK.
21	GND	Ground: All digital signals are referenced to this pin.
22,23	N.C.	Not Connected.
24	FS	Frame Sync input: This signal is a 8kHz clock which defines the start of the transmit and receive frames. Either of three formats may be used for this signal: non delayed normal mode, delayed mode, and non delayed reverse mode.
25	MCLK	Master Clock Input: This signal is used by the switched capacitor filters and the encoder/decoder sequencing logic. Values must be 512 kHz, 1.536 MHz, 2.048 MHz or 2.56 MHz selected by means of Control Register CRO. MCLK is used also to shift-in and out data.
26	LO	A logic 1 written into DO (CR1) appears at LO pin as a logic 0 A logic 0 written into DO (CR1) appears at LO pin as a logic 1.
27,28,29	N.C.	Not Connected.
30	MIC2-	Second negative high impedance input to transmit pre-amplifier for microphone connection.
31	MIC2+	Second Positive high impedance input to transmit pre-amplifier for microphone connection.
32	N.C.	Not Connected.
33	MIC1-	Negative high impedance input to transmit pre-amplifier for microphone connection.
34	MIC1+	Positive high impedance input to transmit pre-amplifier for microphone connection.
35	N.C.	Not Connected.
36	GND A	Analog Ground: All analog signals are referenced to this pin. GND and GND A must be connected together close to the device.
37	MIC3-	Third negative high impedance output to transmit preamplifier for microphone connection.
38	MIC3+	Third positive high impedance output to transmit preamplifier for microphone connection.
39,40	N.C.	Not Connected.
41	V _{CCA}	Positive power supply input for the analog section. V _{CC} and V _{CCA} must be directly connected together.
42	V _{CCE}	Positive power supply input for the power section. V _{CCE} and V _{CC} must be connected together.
43,44	N.C.	Not Connected.

FUNCTIONAL DESCRIPTION

I DEVICE OPERATION

I.1 Power initialization:

When power is first applied, power on reset circuitry initializes ST5092 and puts it into the power down state. Gain Control Registers for the various programmable gain amplifiers and programmable switches are initialized as indicated in the Control Register description section. All CODEC functions are disabled.

The desired selection for all programmable functions may be initialized prior to a power up command using the MICROWIRE control channel.

I.2 Power up/down control:

Following power-on initialization, power up and power down control may be accomplished by writing any of the control instructions listed in Table 1 into ST5092 with "P" bit set to 0 for power up or 1 for power down.

Normally, it is recommended that all programmable functions be initially programmed while the device is powered down. Power state control can then be included with the last programming instruction or in a separate single byte instruction.

Any of the programmable registers may also be modified while ST5092 is powered up or down by setting "P" bit as indicated. When power up or down control is entered as a single byte instruction, bit 1 must be set to a 0.

When a power up command is given, all de-activated circuits are activated, but output D_x will remain in the high impedance state until the second F_s pulse after power up.

I.3 Power down state:

Following a period of activity, power down state may be reentered by writing a power down instruction.

Control Registers remain in their current state and can be changed by MICROWIRE control interface.

In addition to the power down instruction, detection of loss MCLK (no transition detected) automatically enters the device in "reset" power down state with D_x output in the high impedance state.

I.4 Transmit section:

Transmit analog interface is designed in two stages to enable gains up to 42.5 dB to be realized. Stage 1 is a low noise differential amplifier providing 20 dB gain. A microphone may be capacitively connected to MIC1+, MIC1- inputs, while the MIC2+ MIC2- and MIC3+ MIC3- inputs may be used to capacitively connect a second microphone or a third microphone respectively or an auxiliary audio circuit. MIC1 or MIC2 or MIC3 or transmit mute is selected with bits 6 and 7 of register CR4.

In the mute case, the analog transmit signal is grounded and the sidetone path is also disabled. Following the first stage is a programmable gain amplifier which provides from 0 to 22.5 dB of additional gain in 1.5dB step. The total transmit gain should be adjusted so that, at reference point A, see Block Diagram description, the internal 0 dBm0 voltage is 0.49 Vrms (overload level is 0.7 Vrms). Second stage amplifier gain can be programmed with bits 4 to 7 of CR5.

An active RC prefilter then precedes the 8th order band pass switched capacitor filter. A/D converter can be either a 14-bit linear (bit CM = 0 in register CR0) or can have a compressing characteristics (bit CM = 1 in register CR0) according to CCITT A or MU255 code begins immediately at the be-

ginning of the selected Transmit time slot. The total signal delay referenced to the start of the time slot is approximately 195 μ s (due to the transmit filter) plus 125 μ s (due to encoding delay), which totals 320 μ s. Voice data is shifted out on D_x during the selected time slot on the transmit rising edges of MCLK in delayed or non-delayed normal mode or on the falling edges of MCLK in non-delayed reverse mode.

I.5 Receive section:

Voice Data is shifted into the decoder's Receive voice data Register via the D_R pin during the selected time slot on the falling edges of MCLK in delayed or non-delayed normal mode or on the rising edges of MCLK in non-delayed reverse mode.

The decoder consists of either a 14-bit linear or an expanding DAC with A or MU255 law decoding characteristic. Following the Decoder is a 3400 Hz 8th order band-pass switched capacitor filter with integral Sin X/X correction for the 8 kHz sample and hold.

0 dBm0 voltage at this (B) reference point (see Block Diagram description) is 0.49 Vrms. A transient suppressing circuitry ensure interference noise suppression at power up.

The analog speech signal output can be routed either to earpiece (V_{FR+} , V_{FR-} outputs) or to an extra analog output (V_{L+} , V_{L-} outputs) by setting bits OE and SE (1 and 0 of CR4).

Total signal delay is approximately 190 μ s (filter plus decoding delay) plus 62.5 μ s (1/2 frame) which gives approximately 252 μ s.

Differential outputs V_{FR+} , V_{FR-} are intended to directly drive an earpiece. Preceding the outputs is a programmable attenuation amplifier, which must

be set by writing to bits 4 to 7 in register CR6. Attenuations in the range 0 to -30 dB relative to the maximum level in 2 dB step can be programmed. The input of this programmable amplifier is the sum of several signals which can be selected by writing to register CR4.:

- Receive speech signal which has been decoded and filtered,
- Internally generated tone signal, (Tone amplitude is programmed with bits 4 to 7 of register CR7),
- Sidetone signal, the amplitude of which is programmed with bits 0 to 3 of register CR5

V_{FR+} and V_{FR-} outputs are capable of driving output power level up to 66mW into differentially connected load impedance of 30 Ω . Piezoceramic receivers up to 50nF can also be driven.

Differential outputs V_{Lr+} , V_{Lr-} are intended to directly drive an extra output. Preceding the outputs is a programmable attenuation amplifier, which must be set by writing to bits 0 to 3 in register CR6. Attenuations in the range 0 to -30 dB relative to the maximum level in 2.0 dB step can be programmed. The input of this programmable amplifier can be the sum of signals which can be selected by writing to register CR4:

- Receive speech signal which has been decoded and filtered,
- Internally generated tone signal, (Tone amplitude is programmed with bits 4 to 7 of register CR7),
- Sidetone signal, the amplitude of which is programmed with bits 0 to 3 of register CR5.

V_{Lr+} and V_{Lr-} outputs are capable of driving output power level up to 66mW into differentially connected load impedance of 30 Ω . Piezoceramic receivers up to 50nF can also be driven.

BUZZER OUTPUT:

Single ended output BZ is intended to drive a buzzer, via an external BJT, with a squarewave pulse width modulated (PWM) signal the frequency of which is stored into register CR8.

For some applications it is also possible to amplitude modulate this PWM signal with a squarewave signal having a frequency stored in register CR9.

Maximum load for BZ is 5k Ω and 50pF.

I.6 Digital Interface (Fig. 1)

F_S Frame Sync input determines the beginning of frame. It may have any duration from a single cycle of MCLK to a squarewave. Three different relationships may be established between the Frame Sync input and the first time slot of frame by setting bits DM1 and DM0 in register CR1.

Non delayed data mode is similar to long frame timing on ST5080A: first time slot begins nominally coincident with the rising edge of F_S . Alternative is to use delayed data mode, which is similar to short frame sync timing on ST5080A, in which F_S input must be high at least a half cycle of MCLK earlier the frame beginning. In the case of companded code only (bit CM = 1 in register CRO) a time slot assignment circuit on chip may be used with all timing modes, allowing connection to one of the two B1 and B2 voice data channels.

Two data formats are available: in Format 1, time slot B1 corresponds to the 8 MCLK cycles following immediately the rising edge of F_S , while time slot B2 corresponds to the 8 MCLK cycles following immediately time slot B1.

In Format 2, time slot B1 is identical to Format 1. Time slot B2 appears two bit slots after time slot B1. This two bits space is left available for insertion of the D channel data.

Data format is selected by bit FF (2) in register CRO. Time slot B1 or B2 is selected by bit TS (1) in Control Register CR1.

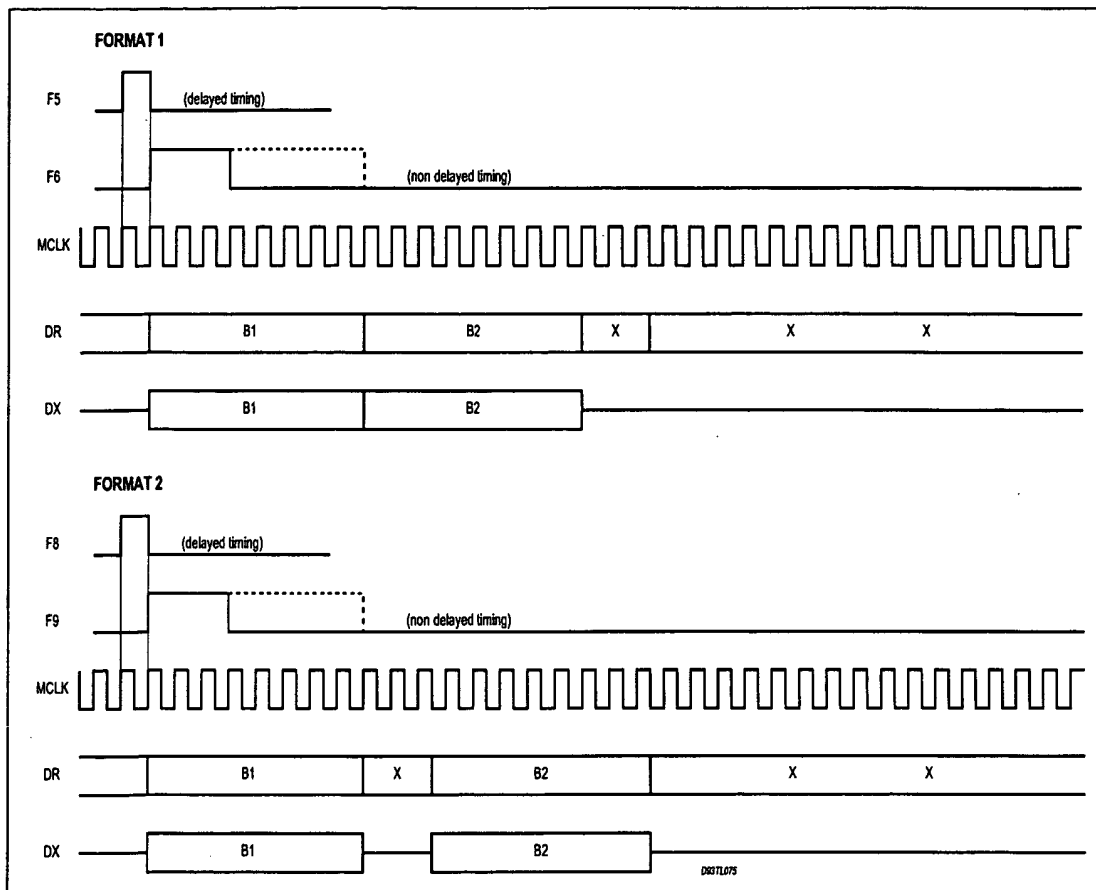

Bit EN (2) in control register CR1 enables or disables the voice data transfer on D_X and D_R as appropriate. During the assigned time slot, D_X output shifts data out from the voice data register on the rising edges of MCLK in the case of delayed and non-delayed normal modes or on the falling edges of MCLK in the case of non-delayed reverse mode. Serial voice data is shifted into D_R input during the same time slot on the falling edges of MCLK in the case of delayed and non-delayed normal modes or on the rising edges of MCLK in the case of non-delayed reverse mode. D_X is in the high impedance Tristate condition when in the non selected time slots.

I.7 Control Interface:

Control information or data is written into or read-back from ST5092 via the serial control port consisting of control clock CCLK, serial data input CI and output CO, and Chip Select input, CS-. All control instructions require 2 bytes as listed in Table 1, with the exception of a single byte power-up/down command.

To shift control data into ST5092, CCLK must be pulsed high 8 times while CS- is low. Data on CI input is shifted into the serial input register on the rising edge of each CCLK pulse. After all data is shifted in, the content of the input shift register is decoded, and may indicate that a 2nd byte of control data will follow. This second byte may either be defined by a second byte-wide CS-pulse or may follow the first contiguously, i.e. it is not mandatory for CS- to return high in between the first and second control bytes. At the end of the 2nd control byte, data is loaded into the ap-

Figure 1: Digital Interface Format (*)

(*) Significant Only For Companded Code.

appropriate programmable register. CS- must return high at the end of the 2nd byte.

To read-back status information from ST5092, the first byte of the appropriate instruction is strobed in during the first CS- pulse, as defined in Table 1. CS- must be set low for a further 8 CCLK cycles, during which data is shifted out of the CO pin on the falling edges of CCLK.

When CS- is high, CO pin is in the high impedance Tri-state, enabling CO pins of several devices to be multiplexed together.

Thus, to summarise, 2 byte READ and WRITE instructions may use either two 8-bit wide CS- pulses or a single 16 bit wide CS- pulse.

1.8 Channel access to PCM interface:
It is possible to access the B channel previously

selected in Register CR1 in the case of companded code only.

A byte written into Control Register CR3 will be automatically transmitted from Dx output in the following frame in place of the transmit PCM data. A byte written into Control Register CR2 will be automatically sent through the receive path to the Receive amplifiers.

In order to implement a continuous data flow from the Control MICROWIRE interface to a B channel, it is necessary to send the control byte on each PCM frame.

A current byte received on Dr input can be read in the register CR2. In order to implement a continuous data flow from a B channel to MICROWIRE interface, it is necessary to read register CR2 at each PCM frame.

ST5092

II PROGRAMMABLE FUNCTIONS

For both formats of Digital Interface, programmable functions are configured by writing to a number of registers using a 2-byte write cycle. Most of these registers can also be read-back for

verification. Byte one is always register address, while byte two is Data. Table 1 lists the register set and their respective addresses.

Table 1: Programmable Register Instructions

Write Test Register CR14	P	1	1	1	0	0	1	X	reserved

NOTE 1: bit 7 of the address byte and data byte is always the first bit clocked into or out from: CI and CO pins when MICROWIRE serial port is enabled.
X = reserved: write 0

NOTE 2: "P" bit is Power up/down Control bit. P = 1 Means Power Down.
Bit 1 indicates, if set, the presence of a second byte.

NOTE 3: Bit 2 is write/read select bit.

NOTE 4: Registers CR12, CR13, and CR15 are not accessible.

* state at power on initialization

CONTROL REGISTER CR0

First byte of a READ or a WRITE instruction to Control Register CR0 is as shown in TABLE 1. Second byte is as shown in TABLE 2.

Master Clock Frequency Selection

A master clock must be provided to ST5092 for operation of filter and coding/decoding functions. MCLK frequency can be either 512 kHz, 1.536 MHz, 2.048 MHz or 2.56 MHz. Bit F1 (7) and F0 (6) must be set during initialization to select the correct internal divider. Default value is 512 kHz. Any clock different from the default one must be selected prior a Power-Up instruction.

Coding Law Selection

Bits MA (4) and IA (3) permit selection of Mu-255 law or A law coding with or without even bit inversion if companded code (bit CM = 1) is selected. Bits MA(4) and IA(3) permit selection of 2-complement, 1-complement or sign and magnitude if linear code (bit CM = 0) is selected.

Coding Selection

Bit CM (5) permits selection either of linear coding (14-bit) or companded coding (8-bit). Default value is linear coding.

Digital Interface format (1)

Bit FF(2) = 0 selects digital interface in Format 1 where B1 and B2 channel are consecutive. FF=1 selects Format 2 where B1 and B2 channel are separated by two bits. (See digital interface format section.)

56+8 selection (1)

Bit 'B7' (1) selects capability for ST5092 to take into account only the seven most significant bits of the PCM data byte selected. When 'B7' is set, the LSB bit on DR is ignored and LSB bit on Dx is high impedance. This function allows connection of an external "in band" data generator directly connected on the Digital Interface.

Digital loopback

Digital loopback mode is entered by setting DL bit(0) equal 1. In Digital Loopback mode, data written into Receive PCM Data Register from the selected received time-slot is read-back from that Register in the selected transmit time-slot on Dx. No PCM decoding or encoding takes place in this mode. Transmit and Receive amplifier stages are muted.

CONTROL REGISTER CR1

First byte of a READ or a WRITE instruction to Control Register CR1 is as shown in TABLE 1. Second byte is as shown in TABLE 3.

Digital Interface Timing

Bit DM1(7) = 0 selects digital interface in delayed timing mode, while DM1 = 1 and DM0 = 0 selects non-delayed normal data timing mode, and DM1 = 1 and DM0 = 1 selects non-delayed reverse data timing mode. Default is delayed data timing.

Latch output control

Bit DO controls directly logical status of latch output LO: ie, a "ZERO" written in bit DO puts the output LO at logical 1, while a "ONE" written in bit DO sets the output LO to zero.

Microwire access to B channel on receive path (1)

Bit MR (4) selects access from MICROWIRE Register CR2 to Receive path. When bit MR is set high, data written to register CR2 is decoded each frame, sent to the receive path and data input at DR is ignored. In the other direction, current PCM data input received at DR can be read from register CR2 each frame.

Microwire access to B channel on transmit path (1)

Bit MX (3) selects access from MICROWIRE write only Register CR3 to Dx output. When bit MX is set high, data written to CR3 is output at Dx every frame and the output of PCM encoder is ignored.

(1) Significant in companded mode only

	Mu 255 law								True A law even bit inversion								A law without even bit inversion												
	msb				lsb				msb				lsb				msb				lsb								
Vin = + full scale	1	0	0	0	0	0	0	0	0	1	0	1	0	1	0	1	0	1	1	1	1	1	1	1	1	1	1	1	1
Vin = 0 V	1	1	1	1	1	1	1	1	1	1	1	0	1	0	1	0	1	1	0	0	0	0	0	0	0	0	0	0	0
Vin = - full scale	0	0	0	0	0	0	0	0	0	0	0	1	0	1	0	1	0	1	0	1	1	1	1	1	1	1	1	1	1

MSB is always the first PCM bit shifted in or out of: ST5092.

Transmit/Receive nabling/disabling

Bit 'EN' (2) enables or disables voice data transfer on D_X and D_R pins. When disabled, PCM data from D_R is not decoded and PCM time-slots are high impedance on D_X . Default value is disabled.

B-channel selection (1)

Bit TS(1) permits selection between B1 or B2 channels. Default value is B1 channel.

CONTROL REGISTER CR2 (1)

Data sent to receive path or data received from D_R input. Refer to bit MR(4) in "Control Register CR1" paragraph.

CONTROL REGISTER CR3 (1)

D_X data transmitted. Refer to bit MX(3) in "Control Register CR1" paragraph.

CONTROL REGISTER CR4

First byte of a READ or a WRITE instruction to Control Register CR4 is as shown in TABLE 1. Second byte is as shown in TABLE 6.

Transmit Input Selection

MIC1 or MIC2 or MIC3 or transmit mute can be selected with bits 6 and 7 (V_S and TE). Transmit gain can be adjusted within a 22.5 dB range in 1.5 dB step with Register CR5.

Sidetone Selection

Bit "SI" (5) enables or disables Sidetone circuitry. When enabled, sidetone gain can be adjusted with Register (CR5). When Transmit path is disabled, sidetone circuit is also disabled.

Output Driver Selection

Bits OE1(4) and OE2(3) provide the selection among the earpiece output or the extra amplifier output or both outputs muted. OE1 = 1 and OE2 = 1 is not allowed.

Ring/Tone signal selection

Bit RTE (2) provide select capability to connect on-chip Ring/Tone generator either to an extra amplifier input or to earpiece amplifier input.

Receive High Pass Filter Selection

Bit HPB (1) provide the selection of the receive high pass filter cutoff frequency.

PCM receive data selection

Bits "SE" (0) provide select capability to connect received speech signal either to an extra amplifier input or to earpiece amplifier input.

CONTROL REGISTER CR5

First byte of a READ or a WRITE instruction to Control Register CR5 is as shown in TABLE 1. Second byte is as shown in TABLE 7.

Transmit gain selection

Transmit amplifier can be programmed for a gain from 0dB to 22.5dB in 1.5dB step with bits 4 to 7. 0 dBmO level at the output of the transmit amplifier (A reference point) is 0.492 Vrms (overload voltage is 0.707 Vrms).

Sidetone attenuation selection

Transmit signal picked up after the switched capacitor low pass filter may be fed back into both Receive amplifiers.

Attenuation of the signal at the output of the sidetone attenuator can be programmed from -12.5dB to -27.5dB relative to reference point A in 1 dB step with bits 0 to 3.

CONTROL REGISTER CR6

First byte of a READ or a WRITE instruction to Control Register CR6 is as shown in TABLE 1. Second byte is as shown in TABLE 8.

Earpiece amplifier gain selection:

Earpiece Receive gain can be programmed in 2 dB step from 0 dB to -30 dB relative to the maximum with bits 4 to 7. 0 dBmO voltage at the output of the amplifier on pins V_{Fr+} and V_{Fr-} is then 1.965 Vrms when 0dB gain is selected down to 61.85 Vrms when -30dB gain is selected.

Extra amplifier gain selection:

Extra Receive amplifier gain can be programmed in 2 dB step from 0 dB to -30 dB relative to the maximum with bits 0 to 3. 0 dBmO voltage on the output of the amplifier on pins V_{Lr+} and V_{Lr-} 1.965 Vrms when 0 dB gain is selected down to 61.85 mVrms when -30 dB gain is selected.

CONTROL REGISTER CR7:

First byte of a READ or a WRITE instruction to Control Register CR7 is as shown in TABLE 1. Second byte is as shown in TABLE 9.

(1) Significant in companded mode only

Ring amplifier gain selection

Output level of Ring/Tone generator, before attenuation by programmable attenuator is 1.6 Vpk-pk when f1 generator is selected alone or summed with the f2 generator and 1.26 Vpk-pk when f2 generator is selected alone.

Selected output level can be attenuated down to -27 dB by programmable attenuator by setting bits 4 to 7.

Frequency mode selection

Bits 'F1' (3) and 'F2' (2) permit selection of f1 and/or f2 frequency generator according to TABLE 9.

When f1 (or f2) is selected, output of the Ring/Tone is a squarewave (or a sinewave) signal at the frequency selected in the CR8 (or CR9) Register.

When f1 and f2 are selected in summed mode, output of the Ring/Tone generator is a signal where f1 and f2 frequency are summed.

In order to meet DTMF specifications, f2 output level is attenuated by 2dB relative to the f1 output level.

Frequency temporization must be controlled by the microcontroller.

Waveform selection

Bit 'SN' (1) selects waveform of the output of the Ring/Tone generator. Sinewave or squarewave signal can be selected.

DTMF selection

Bit DE (0) permits connection of Ring/Tone/DTMF generator on the Transmit Data path instead of the Transmit Amplifier output. Earpiece or extra receive output feed-back may be provided by sidetone circuitry by setting bit SI or directly by setting bit RTE in Register CR4. Loudspeaker feed-back may be provided directly by setting bit RTL in Register CR4.

CONTROL REGISTERS CR8 AND CR9

First byte of a READ or a WRITE instruction to Control Register CR8 or CR9 is as shown in TABLE 1. Second byte is respectively as shown in TABLE 10 and 11.

If "standard frequency tone range" is selected, Tone or Ring signal frequency value is defined by the formula:

$$f1 = CR8 / 0.128 \text{ Hz}$$

and

$$f2 = CR9 / 0.128 \text{ Hz}$$

where CR8 and CR9 are decimal equivalents of the binary values of the CR8 and CR9 registers

respectively. Thus, any frequency between 7.8 Hz and 1992 Hz may be selected in 7.8 Hz step.

If "halved frequency tone range" is selected, Tone or Ring signal frequency value is defined by the formula:

$$f1 = CR8 / 0.256 \text{ Hz}$$

and

$$f2 = CR9 / 0.256 \text{ Hz}$$

This any frequency between 3.9Hz and 996Hz may be selected in 3.9Hz step.

If "doubled frequency tone range" is selected, Tone or Ring signal frequency value is defined by the formula:

$$f1 = CR8 / 0.064 \text{ Hz}$$

and

$$f2 = CR9 / 0.064 \text{ Hz}$$

Thus any frequency between 15.6Hz and 3984Hz may be selected in 15.6Hz step.

TABLE 12 gives examples for the main frequencies usual for Tone or Ring generation.

CONTROL REGISTER CR10

Bit DFT(1) and HFT(0) permits the selection among "standard frequency tone range" (i.e. from 7.8Hz to 1992Hz in 7.8Hz step), "halved frequency tone range" (i.e. from 3.9Hz to 996Hz in 3.9Hz step), and "doubled frequency tone range" (i.e. from 15.6Hz to 3984Hz in 15.6Hz step) according to the values described in CONTROL REGISTER CR8 and CR9.

CONTROL REGISTER CR11

Bit BE(7) permits connection of a f1 squarewave PWM Ring signal, amplitude modulated or not by a f2 squarewave signal, to buzzer driver output BZ. Bits BZ5 to BZ0 define the duty cycle of the PWM squarewave, according to the following formula:

$$\text{Duty Cycle} = CR11(5 + 0) \times 0.78125\%$$

where CR11(5 + 0) is the decimal equivalent of the binary value BZ5 + BZ0.

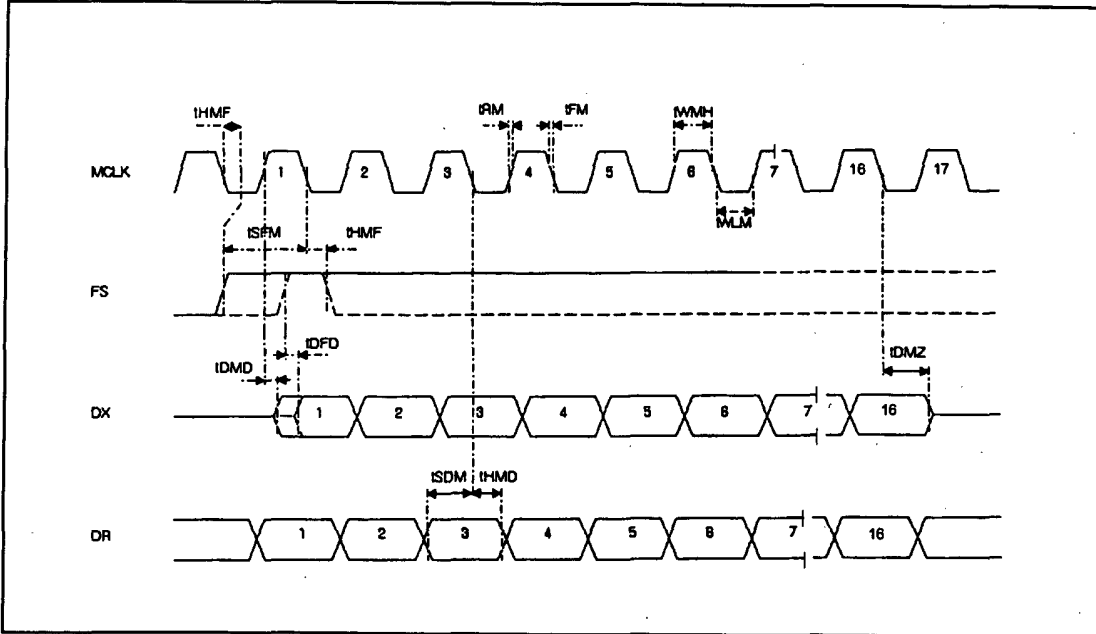

When BE = 1, if bits F1 = 1 and F2 = 0 in register CR7, a f1 PWM ring signal is present at the buzzer output, while if bits F1 = 1 and F2 = 1 in register CR7 the f1 PWM ring signal is also amplitude modulated by a f2 squarewave frequency. Bit BI (6) allows to chose the logic level at which the duty cycle is referred: BI = 0 means that duty cycle is intended as the relative width of the logic1, while BI = 1 means that duty cycle is intended as the relative width of the logic 0. When BE = 0 (or during power down) BZ = 0 if BI = 0 or BZ = 1 if BI = 1.

Tabl 12: Examples of Usual Frequency Selection (Standard frequency tone range)

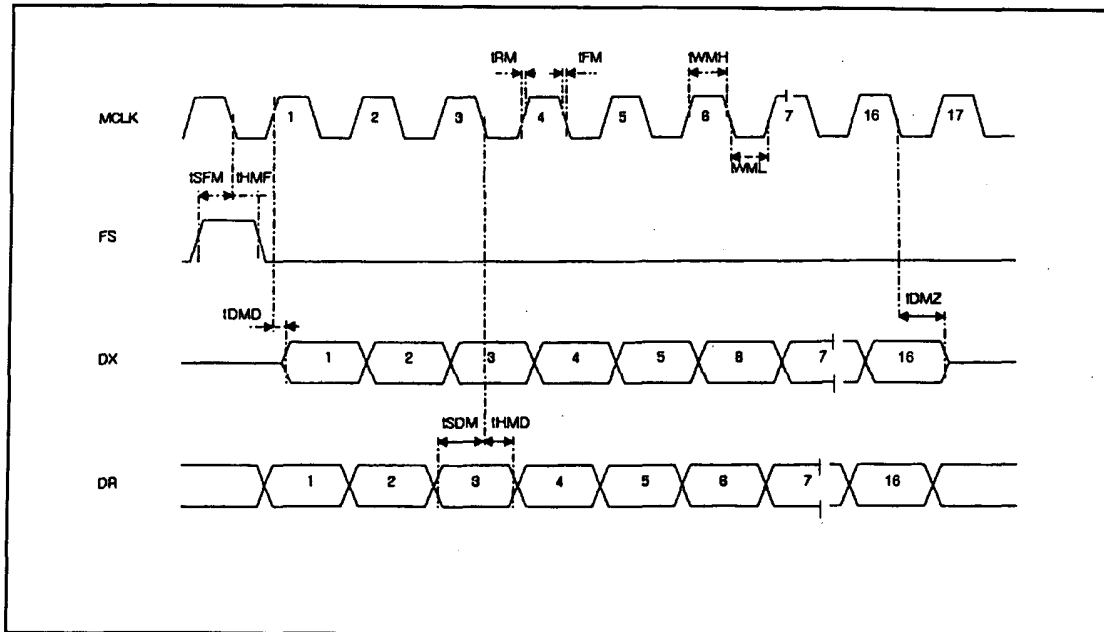

Description	f1 value (decimal)	Theoretic value (Hz)	Typical value (Hz)	Error %
Tone 250 Hz	32	250	250	.00

t _{SSC}	Setup Time, CS- low to CCLK high		50			ns
t _{SDC}	Setup Time, CI valid to CCLK high		50			ns
t _{HCD}	Hold Time, CCLK high to CI invalid		50			ns
t _{DCD}	Delay Time, CCLK low to CO data valid	Load = 100 pF			80	ns
t _{BSD}	Delay Time, CS-low to CO data valid				50	ns
t _{DDZ}	Delay Time CS-high or 8th CCLK low to CO high impedance whichever comes first		10		80	ns
t _{HSC}	Hold Time, 8th CCLK high to CS- high		100			ns
t _{SCS}	Set up Time, CS- high to CCLK high		100			ns

Note 5: A signal is valid if it is above V_{IH} or below V_{IL} and invalid if it is between V_{IL} and V_{IH}.
 For the purposes of this specification the following conditions apply:
 a) All input signal are defined as: V_{IL} = 0.2V_{CC}, V_{IH} = 0.8V_{CC}, t_r < 10ns, t_f < 10ns.
 b) Delay times are measured from the inputs signal valid to the output signal valid.
 c) Setup times are measured from the data input valid to the clock input invalid.
 d) Hold times are measured from the clock signal valid to the data input invalid.

ELECTRICAL CHARACTERISTICS (unless otherwise specified, V_{CC} = 2.7V to 3.6V, T_A = -30°C to 85°C ; typical characteristic are specified at V_{CC} = 3.0V, T_A = 25°C ; all signals are referenced to GND)

DIGITAL INTERFACES

Symbol	Parameter	Test Condition	Min.	Typ.	Max.	Unit

ST5092

APPLICATIONS

Application Note for Microphone Connections

Application Note for V_{Fr} and V_{Lr} Connections

POWER SUPPLIES

While pins of ST5092 device are well protected against electrical misuse, it is recommended that the standard CMOS practise of applying GND before any other connections are made should always be followed. In applications where the printed circuit card may be plugged into a hot socket with power and clocks already present, an extra long ground pin on the connector should be

used.

To minimize noise sources, all ground connections to each device should meet at a common point as close as possible to the GND pin in order to prevent the interaction of ground return currents flowing through a common bus impedance. A power supply decoupling capacitor of 0.1 μF should be connected from this common point to V_{CC} as close as possible to the device pins.

EXPRESS MAIL CERTIFICATION

"Express Mail" mailing label number EV132183489US

Date of Deposit June 20, 2003

I hereby certify that this transmittal letter and the other papers and fees identified in this transmittal letter as being transmitted herewith are being deposited with the United States Postal Service "Express Mail Post Office to Addressee" service under 37 C.F.R. § 1.10 on the date indicated above and are addressed to the Hon. Commissioner for Patents, P.O. Box 1450, Alexandria VA, 22231-1450.

MICHAEL SHANAHAN

TRANSMITTAL LETTER FOR
CONTINUATION PATENT APPLICATION

Sir:

Transmitted herewith for filing are the
[X] specification; [X] claims; [X] abstract; [X] declaration;
[X] a verified statement claiming small entity status; [X] an
information disclosure statement; for the above-identified
patent application.

Also transmitted herewith are:

13 sheets of:

Formal drawings.

Informal drawings. Formal drawings will be filed during the pendency of this application.

An assignment of the invention to:

A check in the amount of \$40.00 to cover the recording fee.

An associate power of attorney.

A certified copy of the priority document, _____ application, No. _____, filed _____

The filing fee has been calculated as shown below:

FOR	NUMBER FILED	NUMBER EXTRA	RATE	FEE
BASIC FEE				\$375.00
TOTAL CLAIMS	1 - 20 = 0	x \$ 9 = \$		0.00
INDEPENDENT CLAIMS	1 - 1 = 0	x \$ 42 = \$		0.00
<input type="checkbox"/> A MULTIPLE DEPENDENT CLAIM		+ \$ 140 = \$		0.00
		TOTAL		\$375.00

A check in the amount of \$ 370.00 in payment of the filing fee is transmitted herewith.

5 METHODS AND APPARATUSES FOR PROGRAMMING
 USER-DEFINED INFORMATION INTO ELECTRONIC DEVICES

 This application is a continuation of United
States Patent Application 09/518,846 filed March 3, 2000
which claims priority from United States Provisional
Application 60/169,158 filed December 6, 1999.

10

Background of the Invention

 This application relates to electronic devices,
and more particularly to a programming apparatus that
allows users to program user-defined information into
15 their electronic device.

 There are many types of electronic devices
available to consumers today that have the ability to
produce both audio sounds and video displays. Many of
these devices provide users with the ability to select
20 and play a particular piece of audio or video. A
television viewer, for example, may tune to a TV channel
and watch a particular program, or connect a VCR or DVD
player to the television in order to view a specific
program not currently being broadcast. Similarly, an

audio system user may tune a receiver to a particular radio station to hear a certain genre of music, or connect a CD or tape player to the system in order to hear specific pieces of music. In both cases, the audio and video is user-selectable.

Currently, however, there are many electronic products that offer an audio/video playing capability that are not fully user-programmable. Users of such devices (e.g., wireless or cordless telephones, pagers, personal digital assistants (PDAs), hand-held computers and the like) have to choose from a limited selection of pre-programmed information (e.g., audio clips, video clips or frames, etc.) placed there by the manufacturer. This severely limits the user's ability to customize the device to suit his or her particular taste. Furthermore, most pre-programmed audio tends to be rather generic and can be confusing when a device of a nearby user generates a sound similar to or the same as that of another user's device. Although a programmable memory within many such electronic devices could support user-defined audio, currently, no system exists for programming such information into an electronic device.

The same is true for user-defined video. For example, certain types of user-defined video information, such as video clips, frames, and other digital or analog images could be programmed into an electronic device (e.g., PDA, wireless phone, or any portable display device) and displayed at a time of the user choosing. Although a programmable memory within such a device could support user-defined video, currently, no system exists for programming such information into the device.

Summary Of The Invention

It is therefore an object of the present invention to provide an apparatus that allows a user to

program user-defined audio information into a programmable electronic device.

It is a further object of the present invention to provide an apparatus that allows a user to program
5 user-defined video information into a programmable electronic device.

These and other objects of the present invention are accomplished by providing methods
apparatuses that allow a user to program user-defined
10 information into his or her electronic device. In one embodiment of the present invention, the programming apparatus includes processing circuitry and first and second communications links. In operation, a user selects a piece of information from a source such as a
15 computer disk drive, the Internet, or a remote database using the first communications link. The programming apparatus may download this information and compare its format with that required by the programmable device to determine format compatibility. If the two formats are
20 compatible, the programming apparatus may download the selected information into the programmable device. If the formats are not compatible, the programming apparatus may convert the downloaded file to a format compatible with that required by the programmable electronic device.
25 The programming apparatus may also provide the user with an opportunity to edit the converted file. Once editing is complete, the resulting file may then be programmed into the programmable device for subsequent use.

In another aspect of the invention, a user may
30 send customized information such as an audio or video file called a "signature" when placing a telephone call. This feature allows a user to select and send a signature file to the person receiving the telephone call such that the person receiving the call is alerted by that file.

Brief Description Of The Drawings

The above and other objects and advantages of the present invention will be apparent upon consideration of the following detailed description, taken in
5 conjunction with the accompanying drawings, in which like reference characters refer to like parts throughout, and in which:

FIG. 1 is a generalized block diagram of a system for programming user-defined information into an
10 electronic device in accordance with one embodiment of the present invention.

FIG. 2 is a schematic diagram of a programmer constructed in accordance with one possible embodiment of the present invention.

15 FIG. 3 shows a computer based implementation of a programmer constructed in accordance with one embodiment of the present invention.

FIG. 4a shows an alternate embodiment of a computer based implementation of a programmer constructed
20 in accordance with the principles of the present invention.

FIG. 4b shows an alternate network embodiment of the computer based implementation in shown in FIG. 4a.

25 FIG. 5 illustrates an imbedded implementation of the programmer shown in FIG. 2.

FIG. 6 shows yet another embodiment of a computer based implementation the programmer in shown in FIG. 4b.

30 FIG. 7 is a schematic diagram of one possible embodiment of a wireless telephone that can receive and play user-defined audio in accordance with one aspect of the present invention.

FIGS. 8-9 show a flow chart illustrating some of the steps involved in programming user-defined

information into an electronic device in accordance with one embodiment of the present invention.

FIGS. 10-12 show a flow chart illustrating some of the steps involved in sending and receiving signature information in accordance with one embodiment of the present invention.

Detailed Description of the Invention

FIG. 1 shows a block diagram of a system 10 for programming user-defined information (e.g., audio, video, or Internet access information, etc.) into an electronic device in accordance with one embodiment of the present invention. As shown in FIG. 1, system 10 generally includes a programmable electronic device 20, a device programmer 30, and a source 50. Programmer 30 is connected to source 50 via link 31, and to device 20 via link 32.

Programmable device 20 may be any portable electronic device (e.g., a wireless telephone, a pager, a handheld computer, personal digital assistant (PDA), etc.). Device 20 may also be any device which integrates some or all of the functions of such devices into one device. For example, device 20 may be a PDA capable of making wireless telephone calls, a PDA with paging functions, a wireless telephone with some PDA or paging functions, a handheld or notebook computer with some or all of the functions of a PDA, a pager, and a telephone, etc.

In FIG. 1, links 31 and 32 may be, for example, communications links (e.g., serial ports, parallel ports, universal serial buses (USB), RS232, GPIB, etc.), modems (e.g., any suitable analog or digital modems, cellular modems, or cable modems), a network interface link (e.g., Ethernet links, token ring links, etc.), wireless communications links (e.g., cellular telephone links,

wireless Internet links, infrared links, etc.), or any other suitable hard-wired or wireless Internet or communications links.

5 Source 50 may be any device or combination of devices suitable for providing user-defined information to programmer 30 (e.g., the Internet, an optical disc player (CD, DVD), a cassette player, a VCR, a digital camera, or any suitable storage device containing computer programs or files, etc.).

10 In operation, a user may choose certain information, such as Internet configuration information, an audio sample of a popular song, a video clip or frame, etc., that is available from source 50 and transfer it to programmer 30. Programmer 30 may then process this
15 information into a suitable format (or may simply route the information if no format conversion is required), and program it into a programmable memory within device 20 (not shown). Device 20 may then retrieve this information when a certain event occurs (e.g., when
20 receiving an incoming telephone call, browsing the Internet, or when programmed to do so by a user, etc.).

Programmer 30 may also coordinate or perform certain functions related to the routing and storing of information within device 20. For example, programmer 30
25 may communicate with (or simply search) device 20 to find available memory locations in which to store the user-defined information. Programmer 30 may also communicate with device 20 to determine which format the incoming information should be converted to so that the
30 information is compatible with the downloading requirements of device 20. For audio files, this may include, but is not limited to, converting to or from any of the following format types: analog; MIDI; MPEG; PCM; Windows Media Audio Code (WMA); WAV; or Adaptive
35 Transform Acoustic Coding (ATRAC), or to or from any

other suitable audio format, etc. For video files, this may include, but is not limited to, converting to or from any of the following format types: analog; JPEG; MPEG; GIF; AVI, or to or from any other suitable video format, etc. Text files may include, for example, HTML files, Wireless Markup Language (WML) files, WordPerfect™ files, Microsoft Office™ files, or any other suitable text files.

If multiple blocks of information are being programmed into device 20, programmer 30 may "tag" the different blocks so that device 20 and/or a user may distinguish among the different blocks stored therein. After the information has been provided, programmer 30 may communicate with device 20 to confirm that the information has been correctly received.

A more detailed diagram of one possible embodiment of programmer 30 is illustrated in FIG. 2. As illustrated, programmer 30 may include a transducer 25, a processor 34, a programmable memory 36, an analog-to-digital (A/D) converter 38, signal processing circuitry (SPC) 40, an output buffer 42, and an input buffer 44. Generally speaking, processor 40 controls the operation of programmer 30. Programmer 30 may be configured to receive and process both analog and digital signals. It may also acquire acoustic signals via transducer 25 (if installed).

In operation, programmer 30 may download certain user-selected information from source 50 via link 31. This information, such as audio or video files, in the form of electronic signals, may be received from link 31 and directed to input buffer 44. As mentioned above, these signals may need to be processed in order to be compatible with the format required by programmable device 20. For example, if analog input signals are received at input buffer 44 and device 20 requires a

digital format, the analog signals may be routed to A/D converter 38 for conversion into a suitable digital form (e.g., into PCM, PAM, etc.). Further processing into another digital format (e.g., MP3, ATRAC, WMA, etc.) may
5 be accomplished by routing the converted signals to SPC 40 or processor 34 (discussed in more detail below). On the other hand, if digital input signals are received at input buffer 44 and device 20 requires analog signals, the digital signals may be routed to SPC 40 or to a
10 dedicated digital-to-analog (D/A) converter (not shown) for conversion to the analog domain.

Processor 34 may route incoming signals from source 50 to memory 36, SPC 40, or directly to output buffer 42 depending on the circumstances. For example,
15 some or all of the input signals received from source 50 may require further processing to meet the downloading specifications of device 20. In this case, the incoming signals that require processing may be routed to SPC 40 for such processing. For example, incoming MP3 or WMA
20 signals may be routed to SPC 40 and converted to ATRAC format (or vice-versa). Once this conversion is complete, the resulting information may be stored in memory 36, or routed to output buffer 42 for programming in device 20. Input signals that do not require a format
25 change may be routed directly from input buffer 44 to memory 36, or output buffer 42. Although not shown in FIG. 2, programmer 30 preferably has a display screen and a data input device, such as a keyboard associated with it so that a user may, among other things, browse and
30 select files, monitor file transfers, and ensure that device 20 has properly received the selected files.

In one embodiment of the present invention, SPC 40 may be programmable so that the conversion and processing protocols contained therein may be periodically updated.

Furthermore, in some embodiments, processor 34 may be programmed via software routines in programmable memory 36 to perform some or all of the functions of SPC 40. In this case, an SPC of reduced processing capacity may be used or SPC 40 may be removed altogether from programmer 30.

Audio signals may also be acquired and processed by programmer 30. Transducer 25 may acquire an acoustic signal from a stereo or other audio source and convert it to an electrical signal. This electrical signal may then be processed in a way similar to the way the above-described analog signal was processed. That is, the electrical signal may be routed to A/D converter 38 and/or SPC 40 and then stored in memory 36 or output buffer 42, for example.

It will be understood that the generalized system shown in FIG. 1 may be implemented in many ways. For example, as shown in FIG. 3, system 100 may be implemented using a computer-based architecture. In this case, some or all of programmer 30 may be installed in or connected to a computer, such as a personal computer. For example, in FIG. 3, programmer 30 may be installed in an expansion slot and connected to an interface bus such as an ISA or PCI bus (not shown) in computer 60. In this configuration, programmer 30 may receive user-defined information via the interface bus in computer 60 and operate as described above with the interface bus acting as part of link 31. Some or all of programmer 30 may also be external to computer 60 and connected to it via a link similar to link 31 (not shown). Furthermore, in certain embodiments, some of the functions of programmer 30 may be distributed between computer 60 and programmer 30. For example, programmer 30 may be constructed such that it partially or fully relies on the processing capability of computer 60. In this type of

embodiment, programmer 30 may be constructed without processor 34 or with a processor of reduced capacity. Programmer 30 may also be constructed such that it partially or fully relies on the memory capacity of
5 computer 60. Moreover, signal processing functions such as those performed by SPC 40 could also be fully or partially carried out by circuitry or software resident within computer 60.

As shown in FIG. 3, computer 60 may be connected
10 to Internet 80 through link 70. Link 70 may be, for example, a modem (e.g., any suitable analog or digital modem, cellular modem, or cable modem), a network interface link (e.g., an Ethernet link, token ring link, etc.), a wireless communications link (e.g., a wireless
15 telephone link, a wireless Internet link, an infrared link, etc.), or any other suitable hard-wired or wireless communications link. With this configuration, a user may download information from Internet 80 (e.g., using electronic distribution (ED) services) and/or from a disc
20 drive or other devices (not shown) connected to computer 60 and program that information into device 20 (via programmer 30 and link 32).

It will be understood, of course, that computer 60, with a suitable communications link, such as
25 link 32, may be programmed with software to function as programmer 30. In this way, a user may take advantage of the fact that many of the components of programmer 30 are resident within computer 60. For example, computer 60 may contain a processor, such as processor 34 and
30 programmable memory circuitry such as memory 36. Computer 60 may also include signal processing circuitry such as SPC 40, or software that instructs processor 34 to perform the necessary format conversions. Computer 60 may include circuitry similar to input buffer 44 and
35 output buffer 42. Such circuitry may include random

access memory (RAM) or cache memory in computer 60. Computer 60 also may include internal or external A/D conversion circuitry, such as A/D converter 38, and an internal or external transducer 25.

5 As shown in FIG. 4a, computer 60, programmed to function as programmer 30, may be connected to Internet 80 through link 70 and to device 20 through link 32. This arrangement allows a user to select information from Internet 80 or from a storage device
10 connected to computer 30 (not shown) for programming into device 20.

 Using the generalized system shown in FIG. 4a, user-defined information may be programmed into device 20 in many ways. For example, computer 60 may be part of a
15 communications network 95, such as a telephone network, that provides Internet and/or telephone access to programmable device 20 (shown in FIG 4b). Communications network 95 may be provide hard-wired or wireless telephone or Internet access (or combination of the two).
20 This arrangement is generally illustrated in FIG. 4b as architecture 200, in which computer 90, for the sake of clarity, represents computer 60, configured at least in part, to function as programmer 30.

 With this configuration, a user of device 20 may
25 access Internet 80 and select information for downloading into device 20. It will be understood, however, that in this implementation, at least a portion of computer 90 is configured to function as programmer 30, and that computer 90 may continue to perform other functions such
30 as communicating with network computers 82, communicating with Internet 80, interfacing with external telephone network 84, and coordinating wireless Internet and telephone access etc., in addition to performing some or all of the above-described programming functions.

In operation, computer 90 may communicate with device 20 to determine its format requirements and perform any conversions necessary to make user-selected information compatible with those requirements. This
5 allows a user to select information, such as audio and/or video, that is available on the Internet or on a remote network computer, and program that information into device 20. This may be accomplished via communications link 33 (which may be any type of link previously
10 described as suitable for link 32). For example, a user may wish to download video images from an Internet site to a hand-held computer, such as a PDA, or to a wireless telephone. The user may communicate with computer 90 via a wireless link 33 and select information from
15 Internet 80 using an Internet browser installed in device 20. Such a browser may be a Wireless Application Protocol (WAP) compliant browser for supporting wireless Internet services. Computer 90 ensures format compatibility of the information, transmits the
20 information to device 20, and may communicate with device 20 to confirm that the selected information has been properly received. Device 20 may provide a visual, audio, or tactile output to indicate the requested information has been successfully received.

25 Computer 90 may also coordinate information downloading with respect to the memory capacity of device 20. For example, if the user-selected information exceeds the available memory of device 20, computer 90 may inform the user, via link 33, that the selected
30 information is larger than the available memory. In such an event, the user may be prompted to cancel or modify the information request. In certain instances, however, the user may instruct computer 90 to provide the information in a "scrolling" fashion (*i.e.*, provide it in
35 portions) so that all the requested information may be

reviewed, albeit in sections. This may be particularly desirable in instances where large files, such as video files, are requested.

In some embodiments of the present invention,
5 computer 90 may simply contact a remote computer or Internet site to fulfill requests for audio or video information in a particular format. Such web sites or remote computers may act as virtual "jukeboxes" of video and audio information, containing extensive lists of such
10 information in a variety of formats available for downloading. Using this approach, a user may select a particular piece of information in a certain format from a list displayed on a screen of programmable device 20. Computer 90 may receive this as a request via link 33 and
15 handle the information transfer to device 20. In some embodiments, format selection may be transparent to the user. That is, the user may simply request a piece of information and computer 90 may determine and then request information in a format appropriate for the
20 requesting device.

In another embodiment, a remote computer or Internet site may perform a format conversion of information requested by computer 90 or device 20. For example, a user may access an Internet site or remote
25 computer using communications network 95 and enter a title or description of the desired audio or video information along with format requirements. The remote computer or Internet site may then search the Internet or other databases to find a file that matches the user's
30 description. Once this file is found, the Internet site or remote computer may convert that file to the requested format, (using a system similar to the described above) and provide it to device 20 via computer 90 and/or link 33. It will be understood, of course, that

embodiments such as these are within the scope of the present invention.

If desired, a user may also employ the systems shown in FIGS. 4a and 4b to download remotely stored
5 information such as Internet access information to device 20. For example, a user may have customized bookmarks or web page addresses stored in a remote personal computer or on Internet 80. The user may employ
10 wireless link 32 or 33 to contact that remote computer or Internet site and then download the Internet access information for use in device 20. This feature is desirable because it relieves the user of the burden of having to type in complicated Internet access information from the small keyboard of a wireless telephone or hand-
15 held computer. It also spares the user from having to re-enter customized Internet information that is already present in another location, into their electronic device. Moreover, such a feature is convenient when a user wishes to access information on a remote computer
20 that is not currently available in device 20. For example, a user may wish to view spreadsheet information stored on a remote computer with device 20. Rather than having to download this information from a hard-wired access point, a user may simply employ wireless link 33
25 (e.g., a wireless modem or Internet connection) to access that remote computer or Internet site and download that information to device 20.

Another feature which may be implemented using the embodiments shown in FIGS. 4a and 4b is a "signature"
30 feature. This allows device 20 to send user-defined information, which may be indicative of the user's personal taste or identity, along with other information when performing certain functions. For example, if a user is placing a wireless telephone call or paging
35 someone with device 20, he or she may select the

signature feature in order to send user-defined audio or video along with, or prior to, that call. A user may accomplish this by browsing through a menu on device 20 that displays available signature options, and by
5 choosing a particular file (not shown). If the user chooses an audio file, for example, device 20 may send that selected audio file when a call or page is placed (or a period of time before the call or page is placed). This audio file may temporarily replace the "ring
10 sequence" of the device receiving the incoming call so that the person receiving the incoming call will be alerted by hearing the audio file sent by the caller. The person receiving the call may be able to discern the identity of the caller or other information from the
15 audio file. After the call is complete, the ring sequence of the receiving device may be returned to its former configuration (either by computer 60 or by the receiving device).

In another embodiment, a user may program certain
20 audio or video files into device 20 that are activated when a certain person calls. For example, a user may program device 20 so that certain signature files are played in response to receiving a characteristic indicative of the caller, such as the caller's telephone
25 number. In this way, a user will be able to identify the caller by the sound and/or display generated by device 20. Users may also program signatures in device 20 to be played at predetermined times. For example, a user (or caller) may program "Happy Birthday"
30 or "Jingle Bells" into device 20 to play on a certain day, or may program device 20 to play a certain signature file at specified time (e.g., as an alarm).

In yet another embodiment, a user, when placing a
35 call, may invoke a menu on device 20, which displays a list of signature files available for the person being

called. This list may be defined by the person receiving the call. For example, the person receiving the call may create a signature file list by selecting certain audio and/or video files and placing them in a database of a remote computer such as computer 90 by using, for example, a personal computer connected to the Internet. In some embodiments, signature files may also be stored in a device 20 of the person receiving the call. In this implementation, a list of signature file names may be stored in computer 90 so that a caller may browse the names of signature files stored in the device of the person receiving the call. Signature files may also be stored in a combination of both computer 90 and device 20.

In some embodiments, the signature information may not necessarily be user-defined. For example, a list of pre-selected signature files may be stored on computer 90 or a remote computer from which a user of device 20 may choose. Such a list may be created by a wireless service provider, an Internet provider, an Internet site, or a manufacturer of the wireless telephone.

With these implementations, the caller may simply select a signature file from the displayed list. The selected file is then sent along with the call by computer 90 (if the selected signature file is stored in computer 90) or associated with the incoming call at device 20 (if the selected signature file is stored in device 20). In some embodiments, the caller may be able to preview signatures before sending them. For example, computer 90 may send the selected signature file to the caller for his or her review.

In systems that have a video capability, a video file containing a video clip or frame may be sent instead of or in addition to the audio sample. This may be accomplished by selecting a video option from a signature

menu and choosing a video file. In this case, the person receiving the call is alerted by seeing or hearing the video clip and/or associated audio. It will be appreciated that a video clip may have its own audio portion associated with it so that the video clip (or frame) by itself would be sufficient to alert the person receiving the incoming call.

The above-described signature feature may be implemented in many ways. In some embodiments, for example, the audio or video signatures may be stored in (the caller's) device 20 and sent along with the outgoing call or page via link 33 and computer 90. In other embodiments, however, the signature information may be stored in computer 90 and associated with the outgoing call when it is processed by computer 90. This type of embodiment may be implemented when it is desired to conserve memory space within device 20. In still other embodiments, signature information may be stored in both device 20 and computer 90. In any case, computer 90 may determine the format requirements of the device receiving the incoming call or page and convert the accompanying signature information into a suitable format.

Another implementation of a system in accordance with this invention may use an architecture 300, which is shown in FIG. 5. Using this arrangement, programmer 30 (or similar circuitry) may be embedded within programmable device 20. User-defined information may be provided to device 20 from source 50 via link 32. Such information may be routed to programmer 30, which may perform some or all of the above-described functions.

If source 50 is an acoustic source, however, link 32 may not be needed. For example, if a user desires to program an acoustic sound into device 20, the user may place a transducer 25, (e.g., a speaker/microphone existing within or external to device 20) near

the acoustic signal source, place device 20 into an "acquisition mode," and record an audio sample. In this case, transducer 25 converts the acoustic signal into an electrical signal, which is provided to programmer 30 for processing and possibly storage within device 20. A visual, audio, or tactile output may be provided by device 20 to indicate a sample has been successfully loaded. A user may employ transducer 25 to acquire and record, for example, a verbal message or sound effect (e.g., laughter, crying, sneezing, etc.) for use as a signature file.

Other embodiments of the present invention may use the embedded architecture of system 400 as shown in FIG. 6. Using this arrangement, user-defined information may be requested by device 20 via link 32 and computer 60. With this approach, a user may select information from Internet 80 or a remote computer and perform any necessary format conversion within device 20.

In addition to selecting user-defined information with programmer 30, a user may customize that information by performing various editing procedures. For example, a user may find an audio track or video clip that suits his or her taste. It may be desired, however, to utilize only a portion of that track or clip. In this case, a user may edit or "sample" a portion of the information to obtain the desired segment. For example, a user may wish to sample a few bars of a popular song and send it along as signature information when making a wireless telephone call. Such editing may be accomplished, for example, by using an application program with programmer 30 or by using known software with computer 60. Furthermore, once the user has edited a particular piece of information, he or she may be given the option to review the piece to ensure it is acceptable. When a user is satisfied with an edited segment, he or she may save it and be given an

opportunity to "name" that segment, so that it may be readily identified later by a user of device 20.

It will be appreciated that various other types of editing procedures are also possible. For example, a
5 user may combine and/or further edit the content of segments of information. This may be accomplished using "cut and paste" routines in an application program. Other types of revisions may include modifying the color or content of a portion of video clip or frame, as well
10 as editing the audio track that accompanies a video clip or frame. It may also include revising or combining audio segments or creating customized audio segments to accompany video clips or frames.

In some instances, a user may wish to download
15 large portions of copyrighted audio or video. To prevent improper usage of such material, programmer 30 may include copyright protection software such as software that conforms with the Secure Digital Music Initiative (SDMI). Generally speaking, this may allow an owner of
20 such material to "check out" a finite number of copies so that unauthorized distribution is prevented.

A schematic diagram of a portion of a wireless telephone 500 that can receive and play user-defined audio and/or video is shown in FIG. 7. As illustrated in
25 FIG. 7, telephone 500 may include antenna 510, receiver/transmitter (R/T) circuit 520, processor 530, communications interface 532, speaker/transducer 540, alerting circuit 550, and optionally, programmer 30 (or similar circuitry).

30 A user may program information into telephone 500 in several ways. For example, a user may connect telephone 500 to an external programmer 30 (not shown in FIG. 7) via link 32 to program user-defined audio or video in telephone 500 as described above. Processor 530
35 may route this information to alerting circuit 550 for

storage and subsequent use. Afterwards, the user may configure telephone 500 to play a certain user-defined audio file stored in alerting circuit 550 when receiving an incoming call. Thus, when a call is received,
5 processor 530 may instruct alerting circuit 550 to play the selected file through speaker 540. If a video file is chosen, processor 530 may instruct alerting circuit 550 to play the user-selected video file through a display screen on the telephone (not shown). Alerting
10 circuit 550 may include programmable memory circuitry for storing user-defined information and driver circuitry (not shown) for driving speaker 540 and/or a display screen on telephone 500.

Telephone 500 may also receive user-defined
15 information from communications network 95 via link 33 and antenna 510. With this implementation, user defined information, such as a signature file, may be received by antenna 510 and demodulated with R/T circuit 520. Processor 530 may then route the demodulated signals to
20 an appropriate location. In the case of a signature file, for example, processor 530 may check the format of the incoming file to ensure it is compatible with the format required by alerting circuit 550. If the format is compatible, the incoming file may be routed to
25 alerting 550 for storage and subsequent use or to speaker 540 for immediate playing. If the format is not compatible, the incoming file may be routed to programmer 30 for conversion. After conversion is complete, processor 530 may instruct programmer 30 to
30 route the converted file to speaker 540 or alerting circuit 550. If a video file was sent as a signature file, processor 530 may instruct alerting circuit 550 to play the user-selected video file through a display in telephone 500 (not shown). In some embodiments,

speaker 540 may be an enhanced performance speaker (as compared to those currently installed in telephones) with a capacity for generating a full range of audio sounds. Moreover, it will be understood that circuitry similar to that shown in FIG. 7 may be installed for use in other communication devices such as PDA's, pagers, notebook computers, etc.

Some of the steps involved in programming user-defined information into programmable device 20 as described herein are illustrated in the flow chart of FIGS. 8-9. It will be understood that although programmer 30 is used in the following description, computer/programmer 90 may also perform some or all of these (or similar) steps.

At step 100 in FIG. 8, programmer 30 allows the user to browse information for potential programming into device 20. As mentioned above, this may include browsing audio/video information on the Internet, or on a hard, floppy, or optical disc drive of a computer. At step 102, the user may choose certain files for programming into device 20. Next, at step 104, programmer 30 may determine the format requirements of device 20 and compare the format of the selected files to that specified by device 20. This may be accomplished, for example, by electronically polling device 20. At step 105, if the formats are compatible, programmer 30 may go directly to step 108. If the formats are not compatible, at step 106, programmer 30 may convert the selected files to a format compatible with device 20. In some embodiments, the user may be prompted to confirm that the conversion should be performed. In addition, programmer 30 may also prompt the user to supply a name for the converted file. Moreover, if the selected file cannot be converted, programmer 30 may so inform the user.

Next, programmer 30 provides the user with an option of editing the contents of the resulting files at step 108. If desired, the user may first review the converted file to determine if editing is warranted. At
5 step 109, if the user chooses not to edit the file, programmer 30 may go directly to step 112 (shown in FIG. 9). If the user decides to edit the file, he or she may do so at step 110. When finished editing, the user may be given the option of reviewing the file at
10 step 111 by returning to step 108 to determine whether the file is acceptable or requires further revision. Programmer 30 may alternate between steps 108-110 until the user is satisfied with the resulting file. When editing is complete, programmer 30 provides the user with
15 the option of programming the file into device 20 at step 112. At this point, (step 113) the user may exit the program at step 114 or return to step 100 to browse more information.

It will be understood that these steps are merely
20 illustrative, and are not meant to be comprehensive or necessarily performed in the order shown. For example, it may be desired to edit a file already stored in device 20. In this case, a user may bypass steps 100-106 and go directly to step 108. In some embodiments,
25 selected files may be revised before converting them to format compatible with device 20. This may be desirable when the file's original format facilitates the editing process. In addition, programmer 30 may determine the format requirements of device 20 at any time before the
30 conversion occurs. A user may also name or revise the name of a selected file at any time.

Some of the steps involved in sending signature files to programmable device 20 as described herein are illustrated in the flow chart of FIGS. 10-12.

At step 150 in FIG. 10, device 20 allows the user to browse signature files for potential transmission to device 20 of the person receiving the call (hereinafter the "receiver"). At step 150, the user may be provided
5 with option of creating a new signature file if a suitable signature file not found on the list. At step 154 the user may select a signature file. Once a signature file is selected, computer 90, at step 156, may determine the location of the selected signature file.
10 Such locations may include, but are not limited to, the caller's device 20, the receiver's device 20, or computer 90.

If computer 90 determines that the signature file is located in the user's device 20 (*i.e.*, the caller's
15 device 20) computer 90 may retrieve that file from the user's device 20 at step 158. Next, computer 90 may compare the format requirements of the receiver's device 20 with the format of the retrieved file to determine if they are compatible at step 160. If the
20 formats are compatible, computer 90 may go directly to step 164. If the formats are not compatible, computer 90 may convert the signature file to an acceptable format at step 162. At step 164, the signature file may be sent along with, or somewhat
25 before, the outgoing call. At step 166, the receiver's device 20 may replace its ring sequence with the signature file and play the signature file. At step 167, the receiver's ring sequence may be returned to its original setting and the program may exit.

If, however, the signature file is located in
30 computer 90 (step 156), computer 90 may retrieve that file at step 168 (FIG. 11). Next, computer 90 may compare the format requirements of the receiver's device 20 with the format of the retrieved file to
35 determine if they are compatible at step 170. If the

formats are compatible, computer 90 may go directly to step 174. If the formats are not compatible, computer 90 may convert the signature file to an acceptable format at step 172. At step 174, the signature file may be sent
5 along with, or somewhat before, the outgoing call. At step 176, the receiver's device 20 may replace its ring sequence with the signature file and play the signature file. At step 177 the receiver's ring sequence may return to its original setting and the program may exit.

10 On the other hand, if computer 90 determines at step 156 that the signature file is located in the receiver's device 20, computer 90 may transmit an indicia indicative of the selected file to the receiver's device 20 along with the outgoing call at step 178

15 (FIG. 12). Next, the receiver's device 20 may associate a signature file that corresponds to the indicia, replace its ring sequence with that signature file, and play that signature file at step 180. At step 182, the receiver's ring sequence may be returned to its original setting and
20 the program may exit. It is assumed for the purposes of this illustration that signatures files stored in the receiver's device 20 are already in a suitable format. However, if this is not the case, a conversion step may be added between step 178 and step 180 (not shown).

25 It will be understood that these steps are merely illustrative, and are not meant to be comprehensive or necessarily performed in the order shown. For example, computer 90 may determine the format requirements of device 20 at any time before the conversion occurs.

30 Thus, it is seen that a device for programming user-defined information into an electronic device is provided. The programmer allows a user to program customized information, such as audio, video, or Internet access information into his or programmable device. This
35 allows a user to, among other things, customize his or

her device to suit the user's particular taste. It will be understood that the foregoing is only illustrative of the principles of the invention, and that various modifications can be made by those skilled in the art without departing from the scope and spirit of the invention. For example, it is not necessary that programmable memory within device be a fixed programmable memory. That is, a removable memory module may be programmed externally from a given programmable device and subsequently installed in that device. Furthermore, the many aspects of the invention are suitable for use with hard-wired, cordless, or wireless communications devices. For example, user-defined audio and video and signature files may be used with hard-wired or cordless telephone systems. Accordingly, such embodiments will be recognized as within the scope of the present invention.

Persons skilled in the art will appreciate that the present invention can be practiced by other than the described embodiments, which are presented for purposes of illustration rather than of limitation, and the present invention is limited only by the claims which follow.

I Claim:

1. A system for programming an audio file into a device capable of making person to person telephone calls comprising:

an electronic means for locating the audio file, the audio file being external to the device and the electronic locating means; and

means for enabling a user of the device to program at least a portion of the audio file into the device wherein the audio file is used as an indicia of an incoming communication.

METHODS AND APPARATUS FOR PROGRAMMING
USER-DEFINED INFORMATION INTO ELECTRONIC DEVICES

Abstract of the Invention

5 A device for programming user-defined information
into an electronic device is provided. The programmer
allows a user to program customized information, such as
user-selected audio, video, or Internet access
information into his or her programmable device. Such
10 electronic devices include wireless telephones, pagers,
and personal digital assistants. The programmer allows a
user to, among other things, customize the device to suit
his or her particular taste.

DECLARATION AND POWER OF ATTORNEY

As a below named inventor, I hereby declare that: my residence, post office address and citizenship are as stated below next to my name;

I believe I am an original, first and sole inventor of the subject matter which is claimed and for which a patent is sought on the invention entitled:

METHODS AND APPARATUSES FOR PROGRAMMING
USER-DEFINED INFORMATION INTO ELECTRONIC DEVICES

the specification of which

is attached hereto

was filed on _____ as
Application Serial No. _____.

I hereby state that I have reviewed and understand the contents of the above-identified specification, including the claims.

I do not know and do not believe that the invention was ever patented or described in any printed publication in any country before my or our invention thereof or more than one year prior to this application.

I do not know and do not believe that the invention was in public use or on sale in the United States of America more than one year prior to this application.

I acknowledge the duty to disclose to the United States Patent and Trademark Office all information known by me to be material to patentability as defined in Title 37, Code of Federal Regulations, § 1.56.

I hereby claim foreign priority benefits under Title 35, United States Code, § 119(a)-(d) of any foreign application(s) for patent or inventor's certificate listed below and have also identified below any foreign application for patent or inventor's certificate having a filing date before that of the application on which priority is claimed:

Because this is a continuation application, copies of these documents are not enclosed herewith. It is respectfully requested that these documents be: (1) fully considered by the Patent and Trademark Office during the examination of this application; and (2) printed on any patent which may issue on this application. Applicant requests that a copy of Form PTO-1449 (submitted in duplicate herewith), as considered and initialed by the Examiner, be returned with the next communication.

Applicant believes that no fee is due at this time. A duplicate copy of this Information Disclosure Statement is enclosed herewith.

An early and favorable action is respectfully requested.

Respectfully submitted,

Michael E. Shanahan
Applicant
