developed for Microsoft Windows version 3.0, that enables MS-DOS-based application programs to run in the protected mode built into 80286 and higher microprocessors. In protected mode, the microprocessor can support multitasking and use of memory beyond 1-MB—capabilities otherwise unavailable to programs designed to run under MS-DOS. *See also* protected mode. *Compare* real mode, Virtual Control Program Interface.

**DPMS** \D`P-M-S` n. Acronym for VESA **D**isplay **P**ower **M**anagement **S**ignaling. A VESA standard for signals that put a video monitor into “standby” or “suspend” mode to reduce power consumption. *See also* green PC, VESA<sup>2</sup>.

**DPSK** \D`P-S-K` n. Acronym for **d**ifferential **p**hase-**s**hift **k**eying. *See* phase-shift keying.

**draft mode** \draɪt`mōd` n. A high-speed, relatively low-quality print mode offered by most dot-matrix printers. *See also* dot-matrix printer, draft quality, print quality.

**draft quality** \draɪt`kwäl`ə-tē` n. A low grade of printing generated by the draft mode on dot-matrix printers. Draft quality varies among printers, ranging from suitable for most purposes to nearly useless. *See also* draft mode, print quality.

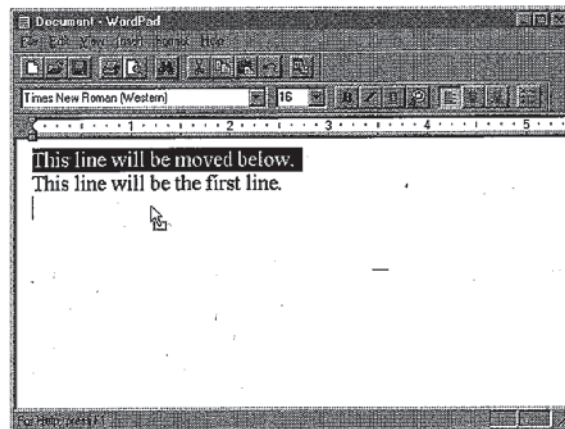

**drag** \drag` vb. In graphical user interface environments, to move an image or a window from one place on the screen to another by “grabbing” it and pulling it to its new location using the mouse. The mouse pointer is positioned over the object, and the mouse button is pressed and held while the mouse is moved to the new location.

**drag-and-drop** \drag`ənd`-drɒp` vb. To perform operations in a graphical user interface by dragging objects on the screen with the mouse. For example, to delete a document in the Mac OS, a user can drag the document icon across the screen and drop it on the trashcan icon. *See* the illustration. *See also* drag, graphical user interface.

**drain** \drān` n. **1.** In a FET, the electrode toward which charge carriers (electrons or holes) move from the source under control of the gate. *See also* FET, gate (definition 2), MOSFET, source (definition 2). **2.** *See* current drain.

**DRAM** \D`ram` n. *See* dynamic RAM.

**DRAW** \drä, drō, D`R-A-W` n. Acronym for **d**irect **r**ead **a**fter **w**rite. A technique used with optical discs to verify the accuracy of information imme-

**Drag-and-drop.** A text drag-and-drop operation in WordPad.

diately after it has been recorded (written) on the disc. *Compare* DRDW.

**drawing interchange format** \drä`ēng in`tər-chānj fōr`mat, drō`ēng` n. *See* DXF.

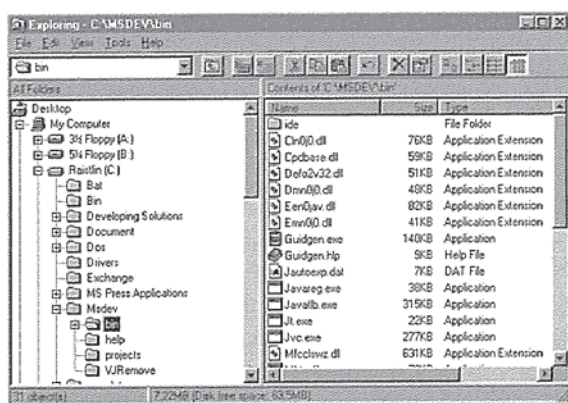

**drawing program** \drä`ēng prō`-gram, drō`ēng` n. A program for manipulating object-oriented graphics, as opposed to manipulating pixel images. In a drawing program, for example, the user can manipulate an element, such as a line, a circle, or a block of text, as an independent object simply by selecting the object and moving it. *See also* object-oriented graphics, pixel image, vector graphics.

**DRDW** \D`R-D-W` n. Acronym for **d**irect **r**ead **d**uring **w**rite. A technique used with optical discs to verify the accuracy of information at the time it is being recorded on the disc. *Compare* DRAW.

**dribbleware** \drib`l-wār` n. Updates, patches, and new drivers for a software product that are released one at a time, as they become available, rather than being issued together in a new version of the product. A company using the dribbleware technique may distribute new and replacement files on diskette or CD-ROM, or make them available for download through the Internet or a private network. *See also* driver, patch<sup>1</sup>.

**drift** \drift` n. The movement of charge carriers in a semiconductor caused by an applied voltage. The term is also used to refer to any slow, unwanted change in a parameter; for example, the value of a resistor might change, or drift, slightly as the resistor warms or cools.

**drill down** \dril doun\ *vb.* To start at a top-level menu, directory, or Web page and pass through several intermediate menus, directories, or linked pages, until the file, page, menu command, or other item being sought is reached. Drilling down is common practice in searching for files or information on the Internet, where high-level Gopher menus and World Wide Web pages are frequently very general and become more specific at each lower level. See the illustration. *See also* Gopher, menu, Web page.

#### Drill down.

**drive** \driv\ *n.* *See* disk drive.

**drive bay** \driv bā\ *n.* A hollow, rectangular area in a computer chassis designed to hold a disk drive. A drive bay always has side walls, usually made of metal, that generally contain holes to facilitate installation of a disk drive. Some drive bays, such as those intended to hold hard disks, are not visible to the user. Most drives are located on the front of the chassis so that the user can interact with the drive.

**drive letter** \driv letər\ *n.* The naming convention for disk drives on IBM and compatible computers. Drives are named by letter, beginning with A, followed by a colon.

**drive mapping** \driv mapəng\ *n.* The assignment of a letter or name to a disk drive so that the operating system or network server can identify and locate it. For example, in PCs, the primary drive mappings are A: and B: for floppy disk drives and C: for the hard disk. *See also* A:, disk drive, hard disk.

**drive number** \driv numbər\ *n.* The naming convention for Macintosh disk drives. For example, a two-drive system calls its drives 0 and 1.

**driver** \drivər\ *n.* A hardware device or a program that controls or regulates another device. A line driver, for example, boosts signals transmitted over a communications line. A device driver is a device-specific control program that enables a computer to work with a particular device, such as a printer or a disk drive. *See also* device driver.

**DRO** \D'R-O\ *n.* Acronym for **destructive read-out**. *See* destructive read.

**drop cap** \drop kap\ *n.* A large capital letter at the beginning of a text block that occupies the vertical depth of two or more lines of regular text. See the illustration.

A sectetuer sed  
adipsicing  
elite in sed  
utm diam  
nonummy nibh wisi  
tincidunt eusismond ut  
laoreet dolore

#### Drop cap.

**drop-dead halt** \drop ded hält\ *n.* *See* dead halt.

**drop-down menu** \drop doun men'yoo\ *n.* A menu that drops from the menu bar when requested and remains open without further action until the user closes it or chooses a menu item. *Compare* pull-down menu.

**drop in** \drop in\ *vb.* To read a spurious signal during a data read/write operation, producing erroneous data.

**droplet** \drop lit\ *n.* **1.** An extension for Quark Express that allows files to be dragged onto a page from the finder. **2.** A feature from Frontier that allows scripts to be embedded within an application and run when the application is double-clicked. **3.** A general name for any AppleScript program that allows files to be dragged and dropped into it for processing. *See also* AppleScript.

**drop out** \drop out\ *vb.* To lose the signal momentarily during a data read/write operation, thus producing erroneous data.

**drum** \drum\ *n.* A rotating cylinder used with some printers and plotters and (in the early days

# Explore Litigation Insights

Docket Alarm provides insights to develop a more informed litigation strategy and the peace of mind of knowing you're on top of things.

## Real-Time Litigation Alerts

Keep your litigation team up-to-date with **real-time alerts** and advanced team management tools built for the enterprise, all while greatly reducing PACER spend.

Our comprehensive service means we can handle Federal, State, and Administrative courts across the country.

## Advanced Docket Research

With over 230 million records, Docket Alarm's cloud-native docket research platform finds what other services can't. Coverage includes Federal, State, plus PTAB, TTAB, ITC and NLRB decisions, all in one place.

Identify arguments that have been successful in the past with full text, pinpoint searching. Link to case law cited within any court document via Fastcase.

## Analytics At Your Fingertips

Learn what happened the last time a particular judge, opposing counsel or company faced cases similar to yours.

Advanced out-of-the-box PTAB and TTAB analytics are always at your fingertips.

## API

Docket Alarm offers a powerful API (application programming interface) to developers that want to integrate case filings into their apps.

## LAW FIRMS

Build custom dashboards for your attorneys and clients with live data direct from the court.

Automate many repetitive legal tasks like conflict checks, document management, and marketing.

## FINANCIAL INSTITUTIONS

Litigation and bankruptcy checks for companies and debtors.

## E-DISCOVERY AND LEGAL VENDORS

Sync your system to PACER to automate legal marketing.
