IPIX TO ACQUIRE PICTUREWORKS TECHNOLOGY, INC. TO FORM END-TO-END INTERNET IMAGING SOLUTIONS COMPANY

\$175 Million Acquisition to Create Industry Leader in B2B and B2C Visual Content Infrastructure--Building the "In Drive E-commerce

OAK RIDGE, Tenn. and PALO ALTO, Calif. (3/8/00)--Internet Pictures Corporation (Nasdaq: IPIX, "iPIX"), a leader in infrastructure solutions for the Internet, and PictureWorks Technology, a leader in digital media solutions which enable users to easily publish still photos and other rich media content to the Web, announced today that they have signed a definitive agreement for iPIX to acquire PictureWorks in a stock-for-stock transaction valued at approximately \$175 million. The combined company's technologies will create the first "Imaging Infranet," an extensive global infrastructure of services, networks, and systems for visual content. This combination of robust infrastructure and services will make iPIX the choice for one-stop imaging solutions in the real estate, e-retail, travel, publishing, entertainment, consumer online auctions, architecture/engineering/construction and insurance markets.

Upon closing, this acquisition will position iPIX as the only end-to-end provider of visual content solutions including:

- Full-service virtual tours provided by iPIX's photographer network
- Self-service 360 by 360 degree virtual tours using iPIX camera kits
- Instant publishing of still photos to Web sites using PictureWorks' Rimfire solution
- iPIX interactive WebCams
- iPIX Movies
- Transformation and enhancement (watermarking, annotation, PhotoMovies(TM), SurroundView(TM), etc.) of user-generated content using Rimfire
- Visual content hosting and distribution to leading Web sites across the Internet

"By combining with PictureWorks, we will create the leading provider of visual content solutions for e-commerce applications on the Internet," said Jim Phillips, chairman and CEO of iPIX. "PictureWorks' industry leading technology and proven track record, combined with iPIX's innovative technology and global visual content infrastructure, will create a winning and complementary partnership. This merger will solidify iPIX's position as the leader in imaging for the Internet and will provide our B2B and B2C customers with the most comprehensive, end-to-end content acquisition and delivery solution in the market today."

Under terms of the agreement, iPIX will acquire all of the outstanding shares of PictureWorks stock in exchange for iPIX stock. iPIX will issue 5,367,670 shares of iPIX Common Stock to the PictureWorks stockholders. The agreement provides for an average closing price of iPIX Common

Discovery.com, Microsoft, CNN, General Motors, IBM, NBC, Travelocity, Disney, Viacom, ADF, Auctions.com and a network of more than 500 iPIX photographers covering over 5,500 cities around the globe.

NEW MARKET OPPORTUNITIES IN AUCTIONS, A/E/C AND INSURANCE

iPIX, which provides imaging solutions for e-commerce applications, will combine its visual content infrastructure with PictureWorks' Rimfire Internet media services and infrastructure. PictureWorks' Rimfire services will enable iPIX to capture media including photos, sound, audio and video directly from end-users and host and distribute it using iPIX's back-end content distribution management system. This acquisition allows iPIX to enhance its offering to the real estate industry as well as new markets including large-scale visual content management including consumer online auctions, architecture/engineering/construction and insurance.

"PictureWorks and iPIX are rapidly building market share and penetration of their Internet imaging solutions," said Don Strickland, president of digital imaging advisors, Future Image. "The combined services and visual content infrastructure of the combined companies provides a complete turnkey Internet imaging solution for numerous markets, including real estate, insurance, travel and entertainment. That includes a full service photographer network, and do-it-yourself support for the over ten million digital camera users on the Internet today. This is a combination that will be hard for competitors to match."

By acquiring PictureWorks, iPIX believes it will be best positioned in the market to offer B2B and B2C imaging solutions to leading e-commerce providers. With the addition of PictureWorks' services and infrastructure to iPIX's visual content infrastructure, iPIX adds easy-to-use media collection and transformation services that allow e-commerce sites to deploy large-scale visual content. Using a content management solution from the combined companies, consumers can drag and drop still photos and audio created media including sound, audio and video into a Web based client/server solution that collects, formats and distributes content.

"By joining forces with an organization of iPIX's caliber, we can truly empower businesses with the broadest range of imaging solutions and infrastructure available. Our combined company will create the de facto standard for B2B and B2C imaging solutions and services for the Internet," said Don Strickland, CEO of PictureWorks Technologies. "The benefit to our combined customers is one-stop outsourcing of all imaging requirements for the Internet."

This acquisition allows iPIX to enhance its offering to the real estate industry with still photo submission, management and distribution in addition to the iPIX Virtual Tour. Homestore.com recently selected PictureWorks' Rimfire solution to provide "Instant Photo Submission" for adding multiple photos to real estate listings. Using Rimfire, real estate professionals have the ability to easily enhance their property listings with additional photos. It allows the simple drag and drop of images from any scanner, CD, or floppy disk directly into the Rimfire-enabled Web page. Rimfire automatically previews, resizes and uploads photos, saving time for the user.

THE 'IMAGING INFRANET'

"With the acquisition of PictureWorks, iPIX is positioned to be a leading provider of B2B imaging for the Internet," said the principal, InfoTrends Research Group. "The addition of Rimfire to iPIX's end-to-end visual content infrastructure will provide businesses robust, easy-to-use and highly scalable imaging solutions for e-commerce applications."

high performance and scalable digital media management infrastructure.

- Visual Content Distribution - Offering the broadest range of end-to-end visual content solutions, iPIX seamlessly distributes content to many of the Internet's most trafficked sites and iPIX View Always technology enables users to view images on various platforms from personal computers to wireless, handheld devices.

The company's headquarters will remain in Oak Ridge, Tennessee and Palo Alto, California, and will include offices in Chicago, Danville, London, Los Angeles, New York, and Tokyo.
