TABLE OF CONTENTS

I. INTRODUCTION 1

II. BACKGROUND 8

 A. Optical circulators limited the scalability of optical switches 8

 B. The '678 patent captured a novel switch scalable to a large number of ports and to a large number of spectral channels 10

 C. Claims 13

III. CLAIMS 1-4, 9, 10, 13, 17, 19-23, 27, 29, 44-46, 53, AND 61-65 ARE NOT OBVIOUS OVER THE COMBINATION OF BOUEVITCH, SPARKS, AND LIN 14

 A. Petitioner’s obviousness challenge is based on impermissible hindsight 14

 1. Petitioner’s obviousness challenge relies on various elements pulled from distinctly different embodiments 15

 2. A POSA would not have used a more complex two-axis mirror to achieve the same function as a one-axis mirror 18

 3. Replacing the single-axis mirror in Bouevitch with the two-axis mirror of Sparks is not a simple substitution 20

 B. Bouevitch teaches away from misalignment for power control as described in Sparks 24

 C. Bouevitch and Sparks are incompatible technologies 28

 D. Bouevitch and Dueck are incompatible technologies 30

 E. Bouevitch does not teach or suggest “multiple fiber collimators, providing an input port . . . and a plurality of output ports” as recited in independent claims 1, 21, and 44. 32

 1. Petitioner incorrectly maps the '678 patent’s claimed “ports” to Bouevitch’s “circulator ports” 32

2.	Proper meaning of the term “port,” as recited in the ’678 patent claims	34
3.	The ’678 patent disavows circulator ports	35
4.	The claimed preamble requires all elements to be either in a “wavelength-separating-routing apparatus” or an “optical apparatus,” so a POSA would have not construed the claimed ports to include circulator ports	40
5.	The ’678 patent’s provisional application is consistent with the construction that the claimed ports are not circulator ports.....	41
6.	The meaning of the term “port,” as recited in the claims	43
7.	Bouevitch at most has two ports as recited in the ’678 patent claims	44
F.	The configuration depicted in Bouevitch’s Figure 11 does not reflect light beams into the circulator ports.....	45
G.	The applied references do not teach or suggest micromirrors being pivotal about two axes and being continuously controllable as recited in independent claims 1, 44, and 61	46
1.	Petitioner misconstrues the element “micromirrors being pivotal about two axes and being continuously controllable” ..	47
2.	Petitioner concedes that Bouevitch does not teach or suggest micromirrors being pivotal about two axes and being continuously controllable.....	48
3.	Sparks does not meet the claimed micromirrors being pivotal about two axes and being continuously controllable	49
4.	Lin’s one-axis mirror does not meet the claimed micromirrors being pivotal about two axes and being continuously controllable.....	50
H.	Petitioner fails to provide <i>KSR</i> rationale for combining Sparks and Lin	54

I. Petitioner does not explain how or why a POSA would have incorporated Sparks’s alleged servo-control into Bouevitch54

IV. THE INDUSTRY ADOPTED CAPELLA’S OPTICAL CONFIGURATION56

A. The industry recognized the advantages presented in Capella’s optical configuration56

B. Experts, including Petitioner’s expert, adopted Capella’s ROADM configuration57

EXHIBIT LIST

Exhibit No.	Reference
2001	Defendant's Motion to Transfer Venue, Capella Photonics, Inc. v. Cisco Systems, Inc., Case Number: 1:14-cv-20529-PAS, Docket No. 19, April 4, 2014.
2002	<i>Capella Photonics Launches Dynamically Reconfigurable Wavelength Routing Subsystems, Offering Unprecedented Operating Cost Savings and Flexibility for Telecom Service Providers</i> , Business Wire (June 2, 2003, 8:16 AM), http://www.businesswire.com/news/home/20030602005554/en/Capella-Photonics-Launches-Dynamically-Reconfigurable-Wavelength-Routing .
2003	WavePath 4500 Product Brief, Capella, http://www.capellainc.com/downloads/WavePath%204500%20Product%20Brief%20030206B.pdf .
2004	U.S. Provisional Patent Application No. 60/183,155
2005	Deposition Transcript of Dan M. Marom, Ph.D.
2006	Benjamin B. Dingel & Achyut Dutta, <i>Photonic Add-Drop Multiplexing Perspective for Next Generation Optical Networks</i> , 4532 SPIE 394 (2001).

Explore Litigation Insights

Docket Alarm provides insights to develop a more informed litigation strategy and the peace of mind of knowing you're on top of things.

Real-Time Litigation Alerts

Keep your litigation team up-to-date with **real-time alerts** and advanced team management tools built for the enterprise, all while greatly reducing PACER spend.

Our comprehensive service means we can handle Federal, State, and Administrative courts across the country.

Advanced Docket Research

With over 230 million records, Docket Alarm's cloud-native docket research platform finds what other services can't. Coverage includes Federal, State, plus PTAB, TTAB, ITC and NLRB decisions, all in one place.

Identify arguments that have been successful in the past with full text, pinpoint searching. Link to case law cited within any court document via Fastcase.

Analytics At Your Fingertips

Learn what happened the last time a particular judge, opposing counsel or company faced cases similar to yours.

Advanced out-of-the-box PTAB and TTAB analytics are always at your fingertips.

API

Docket Alarm offers a powerful API (application programming interface) to developers that want to integrate case filings into their apps.

LAW FIRMS

Build custom dashboards for your attorneys and clients with live data direct from the court.

Automate many repetitive legal tasks like conflict checks, document management, and marketing.

FINANCIAL INSTITUTIONS

Litigation and bankruptcy checks for companies and debtors.

E-DISCOVERY AND LEGAL VENDORS

Sync your system to PACER to automate legal marketing.
