PROTECTING YOUR INVENTION OUTSIDE THE UNITED STATES

Since the rights granted by a U.S. patent extend only throughout the territory of the United States and have no effect in a foreign country, an inventor who wishes patent protection in another country must apply for a patent in a specific country or in regional patent offices. Applicants may wish to consider the filing of an international application under the Patent Cooperation Treaty (PCT). An international (PCT) application generally has the same effect as a regular national patent application in each PCT-member country. The PCT process **simplifies** the filing of patent applications on the same invention in member countries, but **does not result** in a grant of "an international patent" and does not eliminate the need of applicants to file additional documents and fees in countries where patent protection is desired.

Almost every country has its own patent law, and a person desiring a patent in a particular country must make an application for patent in that country in accordance with its particular laws. Since the laws of many countries differ in various respects from the patent law of the United States, applicants are advised to seek guidance from specific foreign countries to ensure that patent rights are not lost prematurely.

Applicants also are advised that in the case of inventions made in the United States, the Director of the USPTO must issue a license before applicants can apply for a patent in a foreign country. The filing of a U.S. patent application serves as a request for a foreign filing license. The application's filing receipt contains further information and guidance as to the status of applicant's license for foreign filing.

Applicants may wish to consult the USPTO booklet, "General Information Concerning Patents" (specifically, the section entitled "Treaties and Foreign Patents") for more information on timeframes and deadlines for filing foreign patent applications. The guide is available either by contacting the USPTO Contact Center at 800-786-9199, or it can be viewed on the USPTO website at <http://www.uspto.gov/web/offices/pac/doc/general/index.html>.

For information on preventing theft of your intellectual property (patents, trademarks and copyrights), you may wish to consult the U.S. Government website, <http://www.stopfakes.gov>. Part of a Department of Commerce initiative, this website includes self-help "toolkits" giving innovators guidance on how to protect intellectual property in specific countries such as China, Korea and Mexico. For questions regarding patent enforcement issues, applicants may call the U.S. Government hotline at 1-866-999-HALT (1-866-999-4258).

LICENSE FOR FOREIGN FILING UNDER
Title 35, United States Code, Section 184
Title 37, Code of Federal Regulations, 5.11 & 5.15

GRANTED

The applicant has been granted a license under 35 U.S.C. 184, if the phrase "IF REQUIRED, FOREIGN FILING LICENSE GRANTED" followed by a date appears on this form. Such licenses are issued in all applications where the conditions for issuance of a license have been met, regardless of whether or not a license may be required as set forth in 37 CFR 5.15. The scope and limitations of this license are set forth in 37 CFR 5.15(a) unless an earlier license has been issued under 37 CFR 5.15(b). The license is subject to revocation upon written notification. The date indicated is the effective date of the license, unless an earlier license of similar scope has been granted under 37 CFR 5.13 or 5.14.

This license is to be retained by the licensee and may be used at any time on or after the effective date thereof unless it is revoked. This license is automatically transferred to any related applications(s) filed under 37 CFR 1.53(d). This license is not retroactive.

The grant of a license does not in any way lessen the responsibility of a licensee for the security of the subject matter as imposed by any Government contract or the provisions of existing laws relating to espionage and the national security or the export of technical data. Licensees should apprise themselves of current regulations especially with respect to certain countries, of other agencies, particularly the Office of Defense Trade Controls, Department of State (with respect to Arms, Munitions and Implements of War (22 CFR 121-128)); the Bureau of Industry and Security, Department of Commerce (15 CFR parts 730-774); the Office of Foreign Assets Control, Department of Treasury (31 CFR Parts 500+) and the Department of Energy.

NOT GRANTED

No license under 35 U.S.C. 184 has been granted at this time, if the phrase "IF REQUIRED, FOREIGN FILING LICENSE GRANTED" DOES NOT appear on this form. Applicant may still petition for a license under 37 CFR 5.12, if a license is desired before the expiration of 6 months from the filing date of the application. If 6 months has lapsed from the filing date of this application and the licensee has not received any indication of a secrecy order under 35 U.S.C. 181, the licensee may foreign file the application pursuant to 37 CFR 5.15(b).

DENIAL OF REQUEST FOR POWER OF ATTORNEY

The request for Power of Attorney filed 05/06/2013 is acknowledged. However, the request cannot be granted at this time for the reason stated below.

- The Power of Attorney you provided did not comply with the new Power of Attorney rules that became effective on June 25, 2004. See 37 CFR 1.32.
- The revocation is not signed by the applicant, the assignee of the entire interest, or one particular principal attorney having the authority to revoke.
- The Power of Attorney is from an assignee and the Certificate required by 37 CFR 3.73(c) has not been received.
- The person signing for the assignee has omitted their empowerment to sign on behalf of the assignee.
- The inventor(s) is without authority to appoint attorneys since the assignee has intervened as provided by 37 CFR 3.71.
- The signature(s) of _____, a co-inventor in this application, has been omitted. The Power of Attorney will be entered upon receipt of confirmation signed by said co-inventor(s).
- The person(s) appointed in the Power of Attorney is not registered to practice before the U.S. Patent and Trademark Office.
- Only one Customer Number can be designated for the Power of Attorney in an application. The Customer Number that was captured is the first Customer Number provided on the Power of Attorney document.
- A request under 37 CFR 1.48 to add an inventor was granted in this application, however, no power of attorney consistent with the power of attorney granted by the originally named inventive entity has been received. Thus, the addition of the inventor has resulted in the loss of power of attorney in the application. See 37 CFR 1.32(e).

- The power of attorney has not been accepted because the party who is giving power of attorney has not been identified. Power of attorney may only be signed by the applicant for patent (37 CFR 1.42) or the patent owner. A patent owner who was not the applicant must appoint any power of attorney in compliance with 37 CFR 3.71 and 3.73. See 37 CFR 1.32(b)(4).
- The power of attorney from the inventors has not been accepted because it is a copy from a prior national application for which benefit is claimed and the continuing application names an inventor who was not named as an inventor in the prior application.
- The power of attorney from the inventors has not been accepted because the power of attorney must be signed by the applicant for patent. See 37 CFR 1.32(b)(4).
- Any request to correct or update the name of the applicant must include an application data sheet (ADS) in compliance with 37 CFR 1.76 specifying the correct or updated name of the applicant in the applicant information section. Any request to change the applicant after an original applicant has been specified under 37 CFR 1.46(b) must include a new ADS in compliance with 37 CFR 1.76 specifying the applicant in the applicant information section and comply with 37 CFR 3.71 and 3.73. Summary

In accordance with teachings of the present disclosure, a system and method for communicating selected information to an electronic device are disclosed that provide significant advantages over prior developed systems. The disclosed embodiments allow a radio listener to create a personal playlist and to listen to this playlist in a wireless atmosphere while enjoying CD quality sound.

According to one aspect of the present disclosure, a system incorporating teachings of the present invention may include a digital engine operable to maintain data representing the selected information in a digital format. In some embodiments, the digital engine may be communicatively coupled to a graphical user interface that allows a user to identify the selected information. The system may also include a communication engine communicatively coupled to the digital engine, the communication engine may be operable to wirelessly communicate the data representing the selected information to an electronic device.

The wireless communication may involve communicating via a cellular communications network. The cellular communications network may be, for example, the global system for mobile communications network (GSM), which may operate around 1.8 GHz or 1.9 GHz. The cellular communications network may also involve, for example, the code-division multiple access network (CDMA). In some embodiments, the wireless communication may involve communicating via a high-speed, low-power microwave wireless link. For example, the wireless link may include a Bluetooth link, which may operate around 2.4 GHz.

According to another aspect of the present invention, a system for communicating selected information to an electronic device is disclosed. The system includes a digital engine operable to maintain data associated with selected audio information and a communication engine communicatively coupled to the digital engine, the communication engine operable to initiate wireless communication of the data to the electronic device.

According to another aspect of the present invention, a method for communicating selected audio information to an electronic device is provided. The method includes maintaining

data associated with the selected audio information using a digital engine, and initiating wireless communication of the data to the electronic device.

According to another aspect of the present invention, an electronic device for receiving selected audio information via wireless communication is provided. The device includes a communication module operable to receive wireless communication of the selected audio information, a storage medium operably coupled to the communication module, the storage medium operable to store the selected audio information, and a processor module coupled to the communication module, the processor module operable to process the received selected audio information.

According to another aspect of the present invention, a method for communicating selected audio information to an electronic device is provided. The method includes presenting information associated with audio information within an interface associated with a communication network, receiving an input from a user identifying the selected information, maintaining data associated with the selected audio information using digital engine, and initiating wireless communication of the data to the electronic device.

According to a particularized aspect of the present invention the interface operates in a browsing environment and the wireless communication operates outside the browsing environment.

Other technical advantages will be apparent to those of ordinary skill in the art in view of the following specification, claims, and drawings.

REMARKS/ARGUMENTS

Provided herewith is a Terminal Disclaimer.

Also provided herewith are clean copies of listings from previously filed Information Disclosure Statements, per the request in the Office Action, and an additional Information Disclosure Statement.

The Specification and Title have been amended as requested. No new matter is added.

Also provided herewith is a Summary, which is taken from U.S Patent No. 7,187,947, to which the present application claims priority and which was previously incorporated by reference. No new matter is added.

Applicants respectfully traverse the §§ 102 and 103 rejections. Applicants also object to each instance of Official Notice taken by the Examiner. As shown above in the listing of the claims, Applicants have amended claims 1, 4, 7, 8, 15 and 16 in accordance with the telephonic interview conducted on April 23, 2013.

STATEMENT OF THE SUBSTANCE OF THE INTERVIEW

The first named inventor, Russell White, and the undersigned gratefully acknowledge and appreciate the time and consideration extended during a telephonic interview, which occurred on April 23, 2013. Taking part in the interview were Examiner Washington, Russell White, and the undersigned attorney, Mark Rozman. The interview began with a discussion of the primary reference Witkowski and the reasons why it fails to anticipate or render the claims obvious. In addition, the undersigned pointed out that the reference does not qualify as prior art, given the filing date of the Witkowski PCT application prior to November 29, 2000 (such that the Witkowski provisional application does not qualify as prior art). M.P.E.P. §706.02(f)(1) (example 6). Based on the discussion, it is believed that filing a Terminal Disclaimer in combination with the above amendments and remarks overcome the current rejections.

Discussed during the interview were various topics, including the claims and the structures associated with communicating media information between a wireless device and a recipient device to enable streaming content communication between the devices. Inventor White indicated that independent claims 1, 8 and 15 would be amended in accordance with the interview discussions. Inventor White also acknowledged that amendments to the independent

claims could affect dependent claims (e.g., creating antecedent issues that require amendments to dependent claims).

In connection with the discussion about the primary reference and its effective §102(e) prior art date, the parties to the call discussed the priority date for the pending claims and the proposed amendments. Inventor White and the undersigned appreciate the Examiner's thoughtful consideration and express determination that the as-filed claims of the present application are fully supported by the original as-filed parent specification of U.S. Patent Application No. 09/537,812, filed on March 28, 2000, which is now U.S. Patent No. 7,187,947. This support remains after the above amendment to the claims. As such and at the Examiner's request Applicants below identify a few of the 3/28/2000 specification quotes that support the claims. The listing is not intended to be complete. There is substantial support and several teachings throughout the 3/28/2000 specification, and a complete understanding of the support and teachings can best be gleaned by reading the entire document while referring back to the figures. In other words, the teachings build throughout the specification and one of ordinary skill in the art would understand that the disclosure teaches the reader to meld various combinations of the figures (e.g., 1, 2, 3, 4, and 9) and the descriptions associated with those various combinations into specific embodiments of the teachings.

The '947 Specification discloses, for example, that "information is communicated across a channel in an asynchronous manner to provide a continuous audio signal to the recipient." The specification explains, "[w]ith a display device for displaying a Website having selectable information, electronic device 300 may allow a user to select audio information via a user interface and receive the selected information via wireless communication thereby providing a customizable WebRadio device for the user. In another embodiment, electronic device 300 may be a modular device configured to be coupled to, for example, a portion of a cars interior. For example, electronic device 300 may be mounted to a portion of a car's console thereby providing a removably coupled electronic device operable to wirelessly receive selected audio information." Moreover, the specification teaches that an "electronic device 300 configured as a PDA and cellular phone may allow for communication with a users email account, voice mail account, the Internet, as well as allowing for the receipt of selected audio information via wireless communication. Electronic device 300 may be operable in a hands-free mode allowing a user to maintain safe driving fundamentals. During use, electronic device 300 may be processing

selective audio information for communicating with an automobile audio system and may further be operating to receive incoming cellular calls. Electronic device 300 may be set-up by the user to pause the music being played and allow the received cellular call to be communicated either via an independent speaker or utilizing the automobiles audio system. Additionally, electronic device 300 may be operable to adjust the listening level of an automobiles audio system, play received voice mail messages, allow a user to view the Internet, etc.” And, the specification goes on to describe how “radio dial 412 surpasses the limitations of conventional systems through providing a programmable radio dial of user customized audio information. Radio dial 412 includes several stations that may be programmed using program interface 413. The preset stations may include several different types of user customized preset information such as user selected playlists, internet broadcast stations, top 10 lists, group playlists, artist's selected lists, on-line radio station, conventional radio stations, Internet phone, cellular phone, etc. and other functions, features, or information associated with audio information. Radio dial 412 may also be displayed as a separate user interface and in some embodiments, does not require a `browsing` environment to view radio dial 412. For example, an electronic device, such as a PDA, having a display may graphically present radio dial 412 to a user. One example may be using electronic device in association with an automobile audio system. Electronic device may display radio dial 412 and may allow a user to navigate, modify, select, adjust volume, access daytimer, access phone lists, etc. or perform other functions while the electronic device is used in association with an automobile sound system. Therefore, radio dial 412 may be operable as an application for use with several different types of electronic devices (i.e., computer systems, portable computing devices, cellular phones, etc.) operable to display radio dial 412 and in come embodiments may be wirelessly communicated to an electronic device.”

In view of these remarks, the application is now in condition for allowance and the Examiner's prompt action in accordance therewith is respectfully requested. The Commissioner is authorized to charge any additional fees or credit any overpayment to Deposit Account No. 20-1504.

Respectfully submitted,

Claim Rejections - 35 USC § 102

5. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

Art Unit: 2646

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

6. Claims 8-11 and 13-20 are rejected under 35 U.S.C. 102(b) as being anticipated by Witkowski et al., US Patent Number 7,349,722 (hereinafter Witkowski).

Regarding claim 8, Witkowski discloses a system for wirelessly communicating musical content, comprising: a portable electronic device comprising: a processor operable to play an audio file that represents a song; a memory communicatively coupled to the processor and configured to store a plurality of audio files; and a wireless communication module communicatively coupled to the processor and operable to communicate a streaming audio signal that represents a playing of the song to a recipient device via a localized communications signaling network, wherein the localized wireless communication module is compliant with a Bluetooth standard, further wherein the wireless communication module is configured to communicate at least a portion of the streaming audio signal to the recipient device using an asynchronous channel [col. 3: lines 36-55; col. 5: lines 17-31; col. 7: lines 20-32; col. 13: line 49 – col. 14: line 31].

Regarding claim 9, Witkowski discloses the portable electronic device is operable as a wireless telephone device [col. 5: lines 17-22]. Further, it is inherent in the art that standard wireless telephones comprise: (1) a display at least partially defining a front surface of the device, (2) a housing component at least partially defining a back surface of the device, (3) an enclosure located between the front surface and the back surface, (4) a rechargeable power supply located within the enclosure, and (5) a non-circular physical interface having a first conductive path and a second conductive path, the non-

Art Unit: 2646

circular physical interface operable to communicate data via the first conductive path and to receive a recharging power for the rechargeable power supply via the second conductive path.

Regarding claim 10, it is inherent in the art for a portable electronic device to comprise a software application, further wherein the portable electronic device is configured to accept an upgrade for the software application that is communicated to the portable electronic device via a software upgrading wireless communication.

Regarding claim 11, Witkowski discloses the wireless communication module is operable to communicate the streaming audio signal at a communication rate that provides for a CD quality listening experience [col. 8: lines 13-20].

Regarding claim 13, Witkowski discloses the portable electronic device has (1) a display at least partially defining a front surface of the device, (2) a housing component at least partially defining a back surface of the device, (3) an enclosure located between the front surface and the back surface, (4) a different wireless communication module located within the enclosure and operable to receive a collection of data representing a media, wherein the wireless communication module communicatively coupled to the processor is further operable to wirelessly communicate a signal representing the media to the recipient device while the different wireless communication module is receiving the collection of data representing the media [col. 3: lines 36-55; col. 5: lines 17-31; col. 7: lines 20-32; col. 13: line 49 – col. 14: line 31].

Regarding claim 14, it is inherent in the art to comprise an internal battery and means for recharging the internal battery.

Art Unit: 2646

Regarding claim 15, Witkowski discloses a system for communicating advanced media content, comprising: an audio system having a memory system, a speaker assembly, and a wireless communication module configured to receive a streaming signal representing a piece of musical content from a different electronic device; the wireless communication module operable to receive at least a portion of the streaming signal via an asynchronous channel of a localized communications signaling network; the memory system comprising a buffer operable to buffer at least some of the streaming signal received by the wireless communication module; and the speaker assembly operable to output a sound representing the piece of musical content [col. 3: lines 36-55; col. 5: lines 17-31; col. 7: lines 20-32; col. 13: line 49 – col. 14: line 31].

Regarding claim 16, Witkowski discloses the audio system further comprises an in-band on-channel radio receiver [ref. 20; col. 7: lines 27-28].

Regarding claim 17, Witkowski discloses instructions stored in the memory system and operable when executed to communicatively couple with a wireless telephone and to work with the wireless telephone while the wireless telephone is in a hands-free mode [col. 6: lines 4-9; col. 11: lines 19-27].

Regarding claim 18, it is inherent in the art to comprise a video presentation system that comprises the audio system.

Regarding claim 19, Witkowski discloses an automobile that comprises the audio system [col. 7: lines 27-28].

Regarding claim 20, Witkowski discloses instructions stored in the memory system and operable when executed to utilize the speaker assembly to output a call

Art Unit: 2646

received at a wireless telephone that is communicatively coupled to the audio system and in a hands-free mode [col. 6: lines 4-9; col. 11: lines 19-27].

Claim Rejections - 35 USC § 103

7. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

8. Claim 12 is rejected under 35 U.S.C. 103(a) as being unpatentable over Witkowski in view of Lee et al., US Patent Application Publication Number 2002/0049852 (hereinafter Lee).

Regarding claim 12, Witkowski discloses the portable electronic device is operable as a wireless telephone device [col. 5: lines 17-22]. Further, it is inherent in the art that standard wireless telephones comprise: (1) a display at least partially defining a front surface of the device, (2) a housing component at least partially defining a back surface of the device, (3) an enclosure located between the front surface and the back surface, and (4) a wide area wireless communication module.

What Witkowski does not specifically disclose is that the wide area wireless communication module is operable to receive a collection of data representing a media at a hybrid of wireless communication rates that includes at least a first rate and a second rate, and (5) a buffer memory, wherein a change in communication rates is at

Art Unit: 2646

least partially based upon an amount of data located in the buffer memory. However, Lee teaches this limitation [paragraph 0087].

At the time of the invention, it would have been obvious to one of ordinary skill in the art to modify Witkowski to include the teaching of Lee. The motivation for this combination would have been to ensure that the media data is received at a rate comparable to what the buffer memory can handle.

9. Claims 1-5 are rejected under 35 U.S.C. 103(a) as being unpatentable over Witkowski in view of Kim, US Patent Number 6,681,120 (hereinafter Kim).

Regarding claim 1, Witkowski discloses A music enabled communication system, comprising: a wireless telephone device [col. 5: lines 17-22]. Further, it is inherent in the art that standard wireless telephones comprise: (1) a display at least partially defining a front surface of the device, (2) a housing component at least partially defining a back surface of the device, (3) an enclosure located between the front surface and the back surface, (4) a wireless communication module located within the enclosure, (5) a rechargeable power supply located within the enclosure, (6) a physical interface having a first conductive path and a second conductive path, the physical interface operable to communicate data via the first conductive path and to receive a recharging power for the rechargeable power supply via the second conductive path, and (7) a memory system, located within the enclosure. Witkowski discloses a collection of instructions stored in the memory system, the collection of instructions operable when executed to utilize the wireless communication module to stream a signal representing at least a

Art Unit: 2646

portion of a song to a recipient device using a given asynchronous wireless channel of a localized communications signaling network [col. 3: lines 36-55; col. 5: lines 17-31; col. 7: lines 20-32; col. 13: line 49 – col. 14: line 31] and recognizing receipt of an incoming telephone call [col. 11: lines 39-44].

What Witkowski does not specifically disclose is altering an outputting of the signal in connection with recognizing receipt of the incoming telephone call. However, Kim teaches this limitation [col. 3: lines 49-53].

At the time of the invention, it would have been obvious to one of ordinary skill in the art to modify Witkowski to include Kim. The motivation for this modification would have been to ensure that the user is notified of an incoming call, even when the user is in the process of listening to other audio.

Regarding claim 2, Witkowski discloses the wireless communication module is compliant with a Bluetooth standard [col. 3: line 51].

Regarding claim 3, it is inherent in the art to comprise an email client operable to communicate with an email server, a voicemail client operable to communicate with a voice mail server, and a browser operable to communicate with an Internet server.

Regarding claim 4, it is inherent in the art for a wireless telephone device to be a dual mode device operable to receive both a wireless digital signal and a wireless analog signal.

Regarding claim 5, Witkowski discloses the collection of instructions comprises a set of hands-free telephone instructions operable when executed to allow the wireless telephone device to operate in a hands-free mode when the wireless telephone device

Art Unit: 2646

is wirelessly coupled with a wireless component of an automobile [col. 6: lines 4-9; col 11: lines 19-27].

10. Claims 6 and 7 are rejected under 35 U.S.C. 103(a) as being unpatentable over the combination of Witkowski and Kim further in view of Lee.

Regarding claim 6, the Examiner takes Official Notice that it is well known in the art for a display to make up more than half of the front surface and the wireless telephone device. It would have been obvious to one of ordinary skill in the art to modify the combination of Witkowski and Kim to include this feature as the size of the display is a matter of design choice which lacks criticality to the overall function of the invention. Further regarding claim 6, the combination of Witkowski and Kim does not specifically teach that the wireless telephone device is operable to receive a collection of data representing a media at a hybrid of wireless communication rates that includes at least one faster rate and one slower rate. However, Lee teaches this limitation [paragraph 0087]. At the time of the invention, it would have been obvious to one of ordinary skill in the art to modify Witkowski to include the teaching of Lee. The motivation for this combination would have been to ensure that the media data is received at a rate comparable to what the buffer memory can handle.

Regarding claim 7, it is inherent in the art for the wireless telephone device to comprise a buffer memory located within the enclosure. Further regarding claim 7, the combination Witkowski and Kim does not specifically teach that the wireless telephone device is operable to receive media content as a series of component parts, further

Art Unit: 2646

wherein the wireless telephone device is operable to receive a component part of the media at a wireless communication rate and a different component part of the selected media at a different wireless communication rate, wherein the wireless telephone device is operable to cause a change in communication rates at which a given component part is received based at least partially upon an amount of data located in the buffer memory. However, Lee teaches this limitation [paragraph 0087]. At the time of the invention, it would have been obvious to one of ordinary skill in the art to modify Witkowski to include the teaching of Lee. The motivation for this combination would have been to ensure that the media data is received at a rate comparable to what the buffer memory can handle.

Double Patenting

11. The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the “right to exclude” granted by a patent and to prevent possible harassment by multiple assignees. A nonstatutory obviousness-type double patenting rejection is appropriate where the conflicting claims are not identical, but at least one examined application claim is not patentably distinct from the reference claim(s) because the examined application claim is either anticipated by, or would have been obvious over, the reference claim(s). See, e.g., *In re Berg*, 140 F.3d 1428, 46 USPQ2d 1226 (Fed. Cir. 1998); *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir.

Art Unit: 2646

1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) or 1.321(d) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent either is shown to be commonly owned with this application, or claims an invention made as a result of activities undertaken within the scope of a joint research agreement.

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

12. Claims 1-20 are rejected on the ground of nonstatutory obviousness-type double patenting as being unpatentable over claims 1 and 17 of U.S. Patent No. 7,187,947. Although the conflicting claims are not identical, they are not patentably distinct from each other because they both teach a wireless telephone device for played stored audio on a separate recipient device.

13. Claims 1-20 are rejected on the ground of nonstatutory obviousness-type double patenting as being unpatentable over claims 1-25 of U.S. Patent No. 7,778,595. Although the conflicting claims are not identical, they are not patentably distinct from

Art Unit: 2646

each other because they both teach a wireless telephone device for played stored audio on a separate recipient device.
