hp journal

The Hewlett-Packard Journal has been documenting HP's technologies and achievements since 1949. The HP Journal has been available on the World Wide Web since early 1994. Now, the Journal offers more functionality with articles created in Adobe Acrobat and a useful search engine for looking up topics within articles.

tandem systems review

The Tandem Journal became the Tandem Systems Review in February 1985. Currently, 27 issues of the Tandem Systems Review have been published and 4 issues of the Tandem Journal. The journal publication began in the Fall of 1983 and ran until October of 1984 as a quarterly publication.

digital technical journal

The DIGITAL Technical Journal has ceased publication, but the back issues from 1991 through 1998 can be found on this site.

Since 1985, the Journal has been privileged to publish information about engineering accomplishments significant for DIGITAL, including standards-setting network and storage technologies, industry-leading VAX systems, record-breaking Alpha microprocessors and semiconductor technologies, and advanced application software and performance tools. The editors thank the engineers who somehow made the time to write, the engineering managers who supported them, the consulting engineers and professors who reviewed manuscripts and made the process a learning experience for all of us, and, of course, the readers who are the reason the Journal came into existence in 13 years ago.
