Defining Technology for Business

I-commerce impact sends shock waves through ERP world

Web-enabled or not, companies are picking up the pace to respond to accelerating demands from the marketplace. Although enterprise resource planning (ERP) giant SAP may have been caught off guard by the onset of Internet commerce, the company is quickly shifting into high gear. *See article, page 14.*

Meanwhile, manufacturers are optimizing their existing ERP infrastructures to handle the growing need for speed. *See Special News Report, page 34.*

From bricks to clicks

■ GM leads wave of next-generation I-commerce initiatives

By Dana Gardner
 TO DOT-COM or not to dot-com? With the potential cost savings and expanded reach of Internet commerce too great to ignore, even a global corporate behemoth such as General Motors is now fully designing its long-term business strategy around the Internet.

A new e-GM division, launched

last week, is one of the early examples of the wave of traditional brick-and-mortar companies, such as Wal-Mart and Williams-Sonoma, that is pursuing major initiatives based on Web services.

"The early Internet economy we have now is only a small vibration of the changes we will see," said George Colony, founder and CEO

of Forrester Research, in Cambridge, Mass. "It will be General Electric, GM, and Wal-Mart that will harmonize their channels and create a single experience for the customer. This is where the action is going to happen. This e-GM is the Manhattan Project of [Internet commerce]."

Payment systems

Credit cards become virtual with eCharge

By Matthew Nelson

PAYMENT COMPANY eCharge plans to do to Internet credit card systems what the Internet itself did to brick-and-mortar stores.

Officials at eCharge will announce this week a completely Internet-based credit and payment system to facilitate purchasing between buyers and eCharge-enabled merchants.

However, eCharge will offer merchants a discount from what they are charged by traditional credit cards such as Visa and MasterCard.

With a less-expensive option available, those traditional cards may be in big trouble.

"The current pricing structure is going to collapse. There is no question about it," said Albert Pang, an electronic-commerce software analyst at International Data Corp., in Mountain View, Calif. "It will change the rules of the game with

NET PROPHET · DYLAN TWENEY

The 'e's have it: learning to spell the new economy

STOP THE INSANITY. I'm drowning in a sea of "e"s.

It all started innocently enough. "E-commerce" was an understandable, pronounceable abbreviation for "electronic commerce."

But then people started adding the "e" prefix to one damn thing after another. IBM

started talking about e-business.

Hewlett-Packard helped Microsoft launch eChristmas.com and then went on to offer e-Services. Then came an avalanche of e-terms, both literal and poetic: eToys, eBay, E-Loan, eConcert, eMachines, and even eEye.

This e-mania has reached its apex of

ridiculousness in the term e-conomy. You can almost hear the pundits patting themselves on the back for coining that one.

And yet — hello? — this isn't even a new word. Someone just dropped a hyphen into a perfectly good English word — one that already began with "e," in case you hadn't noticed.

I, for one, have had e-nough.

Yet, as a pundit myself, I have a professional obligation to coin terms. Besides, I want to help shore up the embattled forces behind the "I" prefix, short for "Internet," of course. (*InfoWorld*, bucking the trend, has long preferred "I-commerce" to "e-commerce.")

Thus, in the spirit of rampant neologisms, I propose that we call the next-generation Internet the I-netnet.

The term I-netnet, of course, refers to the fact that now even the Internet itself isn't immune to the disruptive, decentralizing forces of the Internet.

Three recent battles over Net technologies — the DNS, instant messaging, and Web page annotations — illustrate the point.

The Internet's DNS, the key to readable Net addresses, has long been administered by a single government contractor, Network Solutions Inc. (NSI). The U.S. government proposed a more open, decentralized system, to be organized by the nonprofit Internet Corporation for Assigned Names and Numbers (ICANN). Yet ICANN is proving itself incapable of creating a workable alternative, and NSI meanwhile remains firmly in control.

In other words, the entire I-netnet, which ostensibly empowers small companies to compete with the biggest ones, is being held hostage by a single government contractor.

Another I-netnet attraction is the topsy-turvy farce of Microsoft lashing out at America Online for refusing to make its chat client, AOL Instant Messenger, interoperable with Microsoft's chat client, MSN Messenger.

Microsoft, the champion of openness? Give me a break. At no point has Microsoft offered to open its own chat client to AOL or anyone else — openness only goes one way here.

On the I-netnet, "openness" may be nothing more than a verbal cudgel wielded by the public relations groups in big corporations.

And yet, once in awhile something comes along that really does open things up a bit. One such technology is Third Voice (www.thirdvoice.com), a browser add-on that lets anyone stick virtual Post-it Notes on any Web page, for the whole world to see.

Third Voice has provoked strong reactions. The company and its proponents call the plug-in a powerful tool for free speech. Yet Web publishers are aghast that their Web sites are getting "tagged" by Third Voice graffiti.

Nowadays, when everything starts with an "e," the Web itself almost seems passé. That's why I'm glad there are still new technologies capable of provoking outrage and debate.

Does the I-netnet really have revolutionary potential left in it, or is it e-business as usual? Write to me at dylan@infoworld.com.

Dylan Tweney is the content development

With a Caché database license, you can speed up your development.

With Caché, the post-relational database, you can develop complex applications so fast it's like owning a "License to Speed."

With advanced object and Web technologies, Caché can dramatically speed up your time-to-market. But Caché gives you more than a rapid application development environment.

Once deployed, Caché-based applications are so fast we've had customers get up to a 20x boost in SQL performance after switching their database. And without changing a single line of application code.

All this is made possible by Caché's multidimensional data server and application server, offering you multiple ways to access data, multidimensional storage architecture, scalable performance, plus richer technology for faster Web and object development.

Caché comes from InterSystems, the leader in high-performance database systems, with over 2,000,000 licensed users worldwide, 20 years of database experience, and 24 x 365 support.

If you want to speed things up, start by moving quickly to call us at 1-800-753-2571. We'll rush information to you about the DBMS that is so advanced, it won the "Best New Database of 1998" award.

Do you still peddle applications that run on a relational database engine?

HELP DESK

**Now, mobile professionals can instantly set up
in multiple locations, with a single click.**

INTRODUCING THE NEW CORPORATE EDITION OF SYMANTEC MOBILE ESSENTIALS

Supporting a large mobile workforce can wreak havoc on a help desk. For one thing, users call at all hours from all around the world asking for help adjusting network and IP settings. Face it, manually adjusting to new sites can be a real problem for even savvy users.

But with the new corporate edition of Symantec Mobile Essentials™ 2.0, you can centrally create and deploy an unlimited number of location profiles that will automatically re-set users' laptop configurations to new locations with a single click.

And that's true whether they're logging on from Bombay, working in the Boston office, or telecommuting from home. Call today for more information, to be ready for the June release of Symantec Mobile Essentials. It's one more way Symantec helps maximize user productivity and minimize support from IT.

Explore Litigation Insights

Docket Alarm provides insights to develop a more informed litigation strategy and the peace of mind of knowing you're on top of things.

Real-Time Litigation Alerts

Keep your litigation team up-to-date with **real-time alerts** and advanced team management tools built for the enterprise, all while greatly reducing PACER spend.

Our comprehensive service means we can handle Federal, State, and Administrative courts across the country.

Advanced Docket Research

With over 230 million records, Docket Alarm's cloud-native docket research platform finds what other services can't. Coverage includes Federal, State, plus PTAB, TTAB, ITC and NLRB decisions, all in one place.

Identify arguments that have been successful in the past with full text, pinpoint searching. Link to case law cited within any court document via Fastcase.

Analytics At Your Fingertips

Learn what happened the last time a particular judge, opposing counsel or company faced cases similar to yours.

Advanced out-of-the-box PTAB and TTAB analytics are always at your fingertips.

API

Docket Alarm offers a powerful API (application programming interface) to developers that want to integrate case filings into their apps.

LAW FIRMS

Build custom dashboards for your attorneys and clients with live data direct from the court.

Automate many repetitive legal tasks like conflict checks, document management, and marketing.

FINANCIAL INSTITUTIONS

Litigation and bankruptcy checks for companies and debtors.

E-DISCOVERY AND LEGAL VENDORS

Sync your system to PACER to automate legal marketing.
