I. INTRODUCTION

To prevail at trial in its litigation against Microsoft, VirnetX relied on this Court’s constructions of key language from the patents-in-suit—such as “virtual private network” and “secure domain name.” VirnetX then turned around and told the Patent Office that this Court’s constructions were *wrong*. Specifically, in distinguishing prior art in subsequent reexamination proceedings, VirnetX argued that the terms “virtual private network” and “secure domain name” contain limitations found nowhere in this Court’s constructions.

Now VirnetX seeks to reverse course once again. While conceding that its reexamination arguments require narrowing of this Court’s prior definition of “secure domain name,” VirnetX asks this Court not only to disregard its reexamination arguments concerning “virtual private network,” but also to revisit and *broaden* the construction of that language from the *Microsoft* case. VirnetX should not be permitted to expand and contract the scope of the asserted claims to suit whatever validity or infringement dispute it currently confronts. Defendants’ proposed claim constructions avoid that result by applying settled claim construction principles to interpret the asserted claims consistent with VirnetX’s statements to the Patent Office, both in the original applications and during subsequent reexamination proceedings.

II. LEGAL STANDARDS

This Court is familiar with the pertinent claim construction principles. For convenience, Defendants cite to relevant authority in the body of the brief.

III. PATENTS-IN-SUIT

The six Patents-in-Suit are closely related. The specifications of the ‘135 and ‘151 Patents are substantively identical, as are the specifications of the ‘180, ‘759, ‘504, and ‘211

Explore Litigation Insights

Docket Alarm provides insights to develop a more informed litigation strategy and the peace of mind of knowing you're on top of things.

Real-Time Litigation Alerts

Keep your litigation team up-to-date with **real-time alerts** and advanced team management tools built for the enterprise, all while greatly reducing PACER spend.

Our comprehensive service means we can handle Federal, State, and Administrative courts across the country.

Advanced Docket Research

With over 230 million records, Docket Alarm's cloud-native docket research platform finds what other services can't. Coverage includes Federal, State, plus PTAB, TTAB, ITC and NLRB decisions, all in one place.

Identify arguments that have been successful in the past with full text, pinpoint searching. Link to case law cited within any court document via Fastcase.

Analytics At Your Fingertips

Learn what happened the last time a particular judge, opposing counsel or company faced cases similar to yours.

Advanced out-of-the-box PTAB and TTAB analytics are always at your fingertips.

API

Docket Alarm offers a powerful API (application programming interface) to developers that want to integrate case filings into their apps.

LAW FIRMS

Build custom dashboards for your attorneys and clients with live data direct from the court.

Automate many repetitive legal tasks like conflict checks, document management, and marketing.

FINANCIAL INSTITUTIONS

Litigation and bankruptcy checks for companies and debtors.

E-DISCOVERY AND LEGAL VENDORS

Sync your system to PACER to automate legal marketing.
