Trey Chair: A Desk Chair for Work and for Play

Collin Dunn (@collin_dunn)
Design / Sustainable Product Design
August 21, 2007

Share on Facebook

It looks like a regular office chair; it reclines, and you can adjust the height. But with the push of a button hidden underneath, the Trey Chair springs in to action and transforms into one of many different configurations. The base can be removed from the portion where you park it, allowing for any number of alternate configurations more suited to lounging and relaxing than working diligently (though, judging from the picture above, there are a few configurations for that, too). Trey isn't **Cradle to Cradle certified** like some of its ergonomic brethren, but it would be dang handy for small apartment dwellers or anyone else who wants their desk chair to do more than just help them work at a desk. After the jump, check out more pics of Trey and work and at play; the chair can be had for \$239 - \$299, and **Ars Technica** has a review, if you want to know how it works in the real world. **Trey Chair** via **Apartment Therapy: Los Angeles**

Office Furniture • 8 years ago

Make sure your home office furniture fits your work style. The new modular office furniture on the market these days is very functional. My productivity has increased multi-fold after I purchased a new desk and filing system. With new office furniture I have found the transition from working at the business office to a home office has become easier. I have also become more productive. There are many places to buy online. I found the quality and value of the furniture you can get to be above my expectations. Make sure you ask about the quality before you buy. Check out the [discount office furniture](#) if you get the opportunity.
