Verrazano Enclosure Specification: List of Tables

1. Introduction

Document: DS30042

This document specifies the enclosure design criteria and constraints for the Verrazano enclosure. The Verrazano enclosure will support both the CP4100 and the CP4200 products.

1.1 Overview

This section briefly describes the strategy behind the enclosure specification. General features are presented to give a "feel" for the design. The criteria/constraints have been revised to include provisions for the CP4100. This document contains the revised enclosure requirements, and supersedes requirements found in previous documents.

1.1.1 Motivation

The Verrazano product, as defined in the Verrazano Statement of Requirements, is a stand alone system that provides one or two SCSI parallel bus connections and a Fibre Channel connection. It translates (bridges) the SCSI protocol between the two media types. It is a self-contained system consisting of a power supply, a microprocessor, several megabytes of memory, and controllers for SCSI, Fibre Channel, 802.3 Ethernet, and a serial connection.

The system is intended for a standard commercial environment, primarily as a "desktop" model. Provision for a rack mount is providing through mounting hardware.

The attractiveness of the desktop configuration is of prime importance. Other constraints to the design are physical size, electromagnetic emissions limits, and heat dissipation.

1.1.2 Description

A rough drawing of Verrazano is shown in Figure 1. This is the desk top configuration. Rubber "feet" are placed on the bottom. The back face contains connectors and the power entry. In order to rack mount the unit, the rubber feet are removed, and the box is attached to a 2U tall rack shelf.

Figure 1. Approximate size of enclosure. The depth is 9". The height and width are determined by the panel out-outs on the back face and any clearance necessary for assembly.

Explore Litigation Insights

Docket Alarm provides insights to develop a more informed litigation strategy and the peace of mind of knowing you're on top of things.

Real-Time Litigation Alerts

Keep your litigation team up-to-date with **real-time alerts** and advanced team management tools built for the enterprise, all while greatly reducing PACER spend.

Our comprehensive service means we can handle Federal, State, and Administrative courts across the country.

Advanced Docket Research

With over 230 million records, Docket Alarm's cloud-native docket research platform finds what other services can't. Coverage includes Federal, State, plus PTAB, TTAB, ITC and NLRB decisions, all in one place.

Identify arguments that have been successful in the past with full text, pinpoint searching. Link to case law cited within any court document via Fastcase.

Analytics At Your Fingertips

Learn what happened the last time a particular judge, opposing counsel or company faced cases similar to yours.

Advanced out-of-the-box PTAB and TTAB analytics are always at your fingertips.

API

Docket Alarm offers a powerful API (application programming interface) to developers that want to integrate case filings into their apps.

LAW FIRMS

Build custom dashboards for your attorneys and clients with live data direct from the court.

Automate many repetitive legal tasks like conflict checks, document management, and marketing.

FINANCIAL INSTITUTIONS

Litigation and bankruptcy checks for companies and debtors.

E-DISCOVERY AND LEGAL VENDORS

Sync your system to PACER to automate legal marketing.
