III. Short Selling is Legal and Regulated

13. Short selling is a sale of a security that the seller does not own. It is a common trading strategy in U.S. equity markets. As indicated in the diagram below, in one of its simpler forms, a short seller first borrows the security from a broker-dealer or an institutional stock lender to immediately sell on the financial market. The short seller later closes out the short position, typically by buying back the security in the open market and returning it to the lender.
