'662 Patent – Claim 1

1. A catalyst comprising: an aluminosilicate having the CHA crystal structure and a mole ratio of silica to alumina from about 15 to about 150 and an atomic ratio of copper to aluminum from about 0.25 to about 0.5, the catalyst effective to promote the reaction of ammonia and nitrogen oxides to form nitrogen and H₂O selectively.

'203 Patent – Claim 26

26. A process for the reduction of oxides contained in a gas stream in the presence of a reductant wherein said process comprises adding a reductant to a gas stream and contacting the gas stream containing the reductant with a catalyst comprising a zeolite having a CHA crystal structure and a mole ratio of silica to aluminum from about 15 to about 150 and an atomic ratio of silicon to aluminum from about 0.25 to about 1.

IPR2015

Prior Art as of 2007

“Both synthetic and natural zeolites and their use in promoting reactions, including the selective reduction of nitrogen oxides v ammonia in the presence of oxygen are well known in the art.”
