Creating Value for
Aviation Through
Collaboration

ARINC Standards

AEEC, AMC, and FSEMC, the aviation industry activities organized by ARINC, cooperatively establish consensus-based, voluntary aviation technical standards that no one organization could develop independently.

- The AEEC develops engineering and technical standards for airborne electronics of common interest to all segments of the aviation community.
- The AMC develops maintenance-related technical standards.
- The FSEMC develops technical standards related to simulation and training.

Technical standards adopted by the AEEC, AMC, and FSEMC are published as ARINC Standards by the ARINC Industry Activities secretariat. ARINC Standards describe avionics, cabin systems, protocols, and interfaces used by more than 10,000 air transport and business aircraft worldwide.

- [View the ARINC Standards Development Document](#)

There are three classes of ARINC Standards:

ARINC Characteristics: Define the form, fit, function, and interfaces of avionics, cabin systems, and aircraft networks

ARINC Specifications: Define the physical packaging or mounting of avionics and cabin equipment; communication, networking and data security standards; or a high-level computer language

ARINC Reports: Provide guidelines or general information found by the aviation industry to be preferred practices, often related to avionics maintenance and flight simulator engineering and maintenance

ARINC Standards by Aircraft Generation			
	Networked Aircraft	Digital Aircraft & Flight Simulators	Analog Aircraft & Flight Simulators
Characteristics	ARINC 700-Series	ARINC 700-Series	ARINC 500-Series
Specifications	ARINC 800-Series	ARINC 600-Series ARINC 400-Series	ARINC 400-Series
Reports	ARINC 800-Series	ARINC 600-Series ARINC 400-Series	ARINC 400-Series

To view our on-line catalog and to purchase ARINC Standards, go to the ARINC Standards Store.

ARINC Standards Products

Please choose from the following categories:

400 Series

400 Series ARINC Specifications and Reports provide a design foundation for equipment specified per the ARINC 500 and 700 Series. They include guidelines for installation, wiring, data buses, databases, and general guidance.

500 Series

500 Series ARINC Characteristics define analog avionics equipment still used widely on the B-727, DC-9, and DC-10, as well as -on early models of B-737, B-747, and A-300 aircraft.

600 Series

600 Series ARINC Specifications and Reports define enabling technologies that provide a design foundation for equipment specified per the ARINC 700 Series of digital avionics systems. Among the topics covered by Specifications are data link protocols.

700 Series

700 Series ARINC Characteristics define digital systems and equipment installed on current-model production aircraft. They include definitions of form, fit, function, and interface for line replaceable units (LRUs) in a federated architecture.

800 Series

800 Series ARINC Specifications and Reports define enabling technologies supporting the networked aircraft environment. Among the topics covered in this series is fiber optics used in high-speed data buses.

CD-ROM Material

CD-ROM material includes workshop material and AEEC - AMC - FSEMC archive publications released to the public during the associated calendar year.

DLK Workshop

Explore Litigation Insights

Docket Alarm provides insights to develop a more informed litigation strategy and the peace of mind of knowing you're on top of things.

Real-Time Litigation Alerts

Keep your litigation team up-to-date with **real-time alerts** and advanced team management tools built for the enterprise, all while greatly reducing PACER spend.

Our comprehensive service means we can handle Federal, State, and Administrative courts across the country.

Advanced Docket Research

With over 230 million records, Docket Alarm's cloud-native docket research platform finds what other services can't. Coverage includes Federal, State, plus PTAB, TTAB, ITC and NLRB decisions, all in one place.

Identify arguments that have been successful in the past with full text, pinpoint searching. Link to case law cited within any court document via Fastcase.

Analytics At Your Fingertips

Learn what happened the last time a particular judge, opposing counsel or company faced cases similar to yours.

Advanced out-of-the-box PTAB and TTAB analytics are always at your fingertips.

API

Docket Alarm offers a powerful API (application programming interface) to developers that want to integrate case filings into their apps.

LAW FIRMS

Build custom dashboards for your attorneys and clients with live data direct from the court.

Automate many repetitive legal tasks like conflict checks, document management, and marketing.

FINANCIAL INSTITUTIONS

Litigation and bankruptcy checks for companies and debtors.

E-DISCOVERY AND LEGAL VENDORS

Sync your system to PACER to automate legal marketing.
