In accordance with at least one embodiment of the present invention, a device for receiving and processing data content having at least one original function call includes a hook script generator and a script processing engine. The hook script generator is configured to generate a hook script having at least one hook function. Each hook function is configured to supersede a corresponding original function. The script processing engine is configured to receive and process a combination of the hook script and the data content. The hook function corresponding to the data content original function is executed when the original function is called. The hook function provides a run-time detection and control of the data content processing.
