Trials@uspto.gov 571-272-7822 Paper 13 Entered: September 7, 2016

UNITED STATES PATENT AND TRADEMARK OFFICE

BEFORE THE PATENT TRIAL AND APPEAL BOARD

QUALCOMM INC., Petitioner,

v.

BANDSPEED, INC., Patent Owner.

Case IPR2015-00315¹ Patent 7,477,624 B2

Before BART A. GERSTENBLITH, DAVID C. McKONE, and PATRICK M. BOUCHER, *Administrative Patent Judges*.

BOUCHER, Administrative Patent Judge.

RM

FINAL WRITTEN DECISION 35 U.S.C. § 318(a) and 37 C.F.R. § 42.73

¹ Case IPR2015-01580 has been joined with this proceeding

I. INTRODUCTION

A. Background

Marvell Semiconductor, Inc., MediaTek Inc., and MediaTek USA, Inc., filed a Petition (Paper 1, "Pet.") to institute an *inter partes* review of claims 5–8 and 17–20 of U.S. Patent No. 7,477,624 B2 ("the '624 patent"). Bandspeed, Inc. ("Patent Owner") did not file a Preliminary Response. Prior to institution, we granted a motion to terminate the proceeding with respect to Marvell Semiconductor, Inc. Paper 13. Pursuant to 35 U.S.C. § 314, in our Institution Decision (Paper 14, "Dec."), we instituted this proceeding as to each of the challenged claims.

After institution, Qualcomm Inc. filed substantially the same petition in IPR2015-01580 (IPR2015-01580, Paper 1), together with a Motion for Joinder of IPR2015-01580 with the instant proceeding (IPR2015-01580, Paper 2). On September 17, 2015, we granted a motion to terminate this proceeding with respect to MediaTek Inc. and MediaTek USA, Inc., but not as to Patent Owner, leaving only Patent Owner as a party to the proceeding. Paper 22. On November 16, 2015, we granted Qualcomm Inc.'s Motion for Joinder, joining Qualcomm Inc. to the instant proceeding. Paper 23. Qualcomm Inc. ("Petitioner") is now the sole petitioner.

After institution of trial, Patent Owner filed a Response (Paper 28, "PO Resp."), and Petitioner filed a Reply to the Patent Owner's Response (Paper 29, "Reply"). An oral argument was held on May 26, 2016, and the transcript was entered into the record. Paper 40 ("Tr.").

IPR2015-00315 Patent 7,477,624 B2

Petitioner relies on the testimony of Zhi Ding, Ph.D. Ex. 1002 ("Ding Decl."); Ex. 1013 ("Supp. Ding Decl."). Patent Owner relies on the testimony of Jose Luis Melendez, Ph.D. Ex. 2001 ("Melendez Decl.").

We have jurisdiction under 35 U.S.C. § 6(c). This Decision is a final written decision under 35 U.S.C. § 318(a) as to the patentability of the challenged claims. Based on the record before us, Petitioner has demonstrated, by a preponderance of the evidence, that claims 5, 6, 8, 17, 18, and 20 are unpatentable, but has not demonstrated that claims 7 and 19 are unpatentable.

B. The '624 Patent

The '624 patent was filed on April 3, 2006, as a continuation of U.S. Patent Application No. 09/948,488, which was filed on September 6, 2001, and issued as U.S. Patent No. 7,027,418. Ex. 1001 [63]. The '624 patent also claims the benefit of the filing date of U.S. Provisional Application No. 60/264,594, filed on January 25, 2001. *Id.* at [60].

The '624 patent relates to managing the use of communications channels based on channel performance. Ex. 1001, col. 1, ll. 46–48. Figure 2 of the '624 patent is reproduced below.

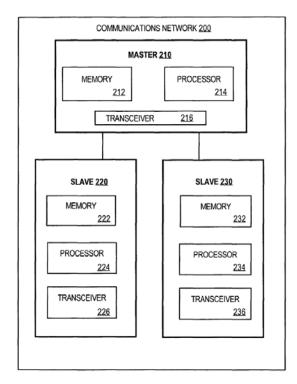

Figure 2 is a block diagram that depicts a communications network having "master" communications device 210 and multiple "slave" communications devices 220 and 230, each of which includes a memory, a processor, and a transceiver. *Id.* at col. 9, ll. 53–63. To manage the use of communications channels between the master and slaves via the respective transceivers, an initial set of channels is selected based on selection criteria at the start-up of the communications network. *Id.* at col. 6, ll. 19–21. Additional sets of channels then are selected periodically for adaptive avoidance of interference. *Id.* at col. 6, ll. 21–23.

For example, master 210 may select a set of communications channels from default communications channels for a specified communications protocol, generate identification data for the selected set of channels, and transmit the identification data to slave 220. *Id.* at col. 9, 1. 64–col. 10, 1. 3. If slave 230 is incapable of using the selected set of channels, master 210

IPR2015-00315 Patent 7,477,624 B2

communicates with slave 220 using the selected set of communications channels and communicates with slave 230 using the default communications channels for the specified communications protocol. *Id.* at col. 10, ll. 4–15.

The '624 patent describes various techniques for assessing performance of communications channels that include the use of special test packets (*id.* at col. 10, l. 33–col. 12, l. 35), a received signal strength indicator ("RSSI") (*id.* at col. 12, l. 37–col. 13, l. 2), and cyclic redundancy checks ("CRC") (*id.* at col. 13, l. 50–col. 14, l. 6). Communications channels are classified based on channel performance as determined by such assessments and according to classification criteria. *Id.* at col. 14, ll. 63–65. In a particular implementation, a "referendum" approach is used in which participant devices "vote" whether to use a particular channel. *Id.* at col. 16, ll. 65–66. The votes may be used according to various approaches, such as through the use of weighted votes, in determining final channel classifications. *Id.* at col. 17, ll. 25–34.

C. Illustrative Claim

Independent claim 5 is illustrative of the claims at issue:

5. A communications apparatus comprising:

means for selecting, based upon performance of a plurality of communications channels at a first time, a first set of two or more communications channels from the plurality of communications channels;

means for causing the first set of two or more communications channels to be used for communications between a pair of participants;

Explore Litigation Insights

Docket Alarm provides insights to develop a more informed litigation strategy and the peace of mind of knowing you're on top of things.

Real-Time Litigation Alerts

Keep your litigation team up-to-date with **real-time alerts** and advanced team management tools built for the enterprise, all while greatly reducing PACER spend.

Our comprehensive service means we can handle Federal, State, and Administrative courts across the country.

Advanced Docket Research

With over 230 million records, Docket Alarm's cloud-native docket research platform finds what other services can't. Coverage includes Federal, State, plus PTAB, TTAB, ITC and NLRB decisions, all in one place.

Identify arguments that have been successful in the past with full text, pinpoint searching. Link to case law cited within any court document via Fastcase.

Analytics At Your Fingertips

Learn what happened the last time a particular judge, opposing counsel or company faced cases similar to yours.

Advanced out-of-the-box PTAB and TTAB analytics are always at your fingertips.

API

Docket Alarm offers a powerful API (application programming interface) to developers that want to integrate case filings into their apps.

LAW FIRMS

Build custom dashboards for your attorneys and clients with live data direct from the court.

Automate many repetitive legal tasks like conflict checks, document management, and marketing.

FINANCIAL INSTITUTIONS

Litigation and bankruptcy checks for companies and debtors.

E-DISCOVERY AND LEGAL VENDORS

Sync your system to PACER to automate legal marketing.
