

transmitted to, or read by, the computer 21, and a determination is made as to whether the initially stored distances between the devices have changed.

Any change in distance between any two or more of the respective global positioning devices 22A-22E would represent that the vehicle, or at least a portion thereof, has been dismantled, at least in part, and possibly to a greater extent, depending upon the resulting disparity in the respective distances. This information may then be transmitted via transmitter 24 to the vehicle position system receiver 14 and the authorized user or operator can be notified of this condition. In this manner, it can be ascertained if a vehicle has been dismantled, "chopped", or stripped, which information may be vital in the recovery process, and in the insurance claims process. The embodiment of Figure 10 can also be utilized in order to ascertain if the vehicle has been compacted or "boxed." In this manner, the present invention may also be utilized in order to determine if the vehicle has been structurally altered in any manner.

The apparatus and the method of the present invention may also be utilized in conjunction with a central security office or agency, such as a private security service, or by local or regional law enforcement offices or agencies, in order to provide a prompt means by which to report a vehicle theft, provide for a manner in which to disable and/or re-enable a vehicle system, and/or to determine vehicle position and/or location so as to facilitate the recovery of the vehicle. In such an embodiment, vehicle owners will register their vehicles and any and all necessary information pertaining thereto, including access and command codes, with the central security office.

09277935-032999

The present invention may also be utilized so as to provide for a prompt law enforcement theft reporting, response to the theft report and recovery of the vehicle. Figure 11A illustrates another alternate embodiment of the present invention wherein the apparatus 1 is utilized in conjunction with a central security office or agency, such as a private security service, or by a local or regional law enforcement office or agency. In Figure 11A, the apparatus 1 is utilized in conjunction with an associated apparatus 950 which, in the preferred embodiment, is located at the central security office.

The apparatus 950 comprises a receiver 955 which may, but need not, be identical to the receiver 3 which is utilized in the apparatus 1. The receiver 955 should be capable of receiving the various codes which can be transmitted by the transmitter 2 or transceiver (i.e. access code(s) and command code(s)) for any one or for any number of vehicles which may be registered with the central security office. The receiver 955 should be capable of receiving the access code(s) and command code(s) for each registered apparatus.

In the embodiment of Figure 11A, the apparatus 950 also comprises a computer 970, which is connected to the receiver 955. The apparatus 950 also comprises a vehicle position system receiver 960 for receiving position data which is transmitted from the vehicle position and locating device 13. The position data system receiver 960 is also connected to the computer 970. The computer 970 also comprises the requisite memory ROM and RAM devices (not shown). The apparatus 950 also comprises a display device 980, an user interface device 975 and an output device 985 which can be a printer, all of which devices are connected to the computer 970 and are utilized in conjunction therewith.

0927935 032999
066229 5242260

In this regard, the vehicle position data can be processed by, and at, the apparatus 950. Vehicle position data can then be displayed to authorized personnel at the central security office on the display device 980 or output via the output device 985 which may be a printer. While operation of the apparatus 950 may be automatic, authorized personnel may enter commands so as to provide control over, or operate, the apparatus 950 via the user interface 975, if desired.

In this manner, vehicle location or movement may be displayed, and/or tracked, on the display device 980 or output via the output device 985 at the central security office. In this regard, authorized personnel at the central security office or agency could locate or track the vehicle and alert the proper authorities.

In yet another embodiment, the access code may be only transmitted to, and received by, the receiver 955 of the apparatus 950. The apparatus 1 may then be accessed and controlled via access and command codes which are transmitted by the transmitter 965 of the apparatus 950 which access and command codes are received by the receiver 3 of the respective vehicle. In this embodiment, the authorized personnel may provide control over the apparatus 1 by inputting data and commands into the user interface 975. In this embodiment, the vehicle position data and any data transmitted by the CPU 4 of the apparatus 1, is transmitted to, and received by, the vehicle position receiver system 960 and/or at the vehicle position system receiver 14, respectively.

In yet another embodiment, the access code may be transmitted and received only at the receiver 3 thereby accessing the apparatus 1. The vehicle transmitter 3A then transmits a data

0027935-032000

signal to the receiver 955 of the apparatus 950 thereby alerting the apparatus 950 that the vehicle has been stolen. Command code data as well as other data may then be transmitted to the apparatus 1 via the transmitter 965 of the apparatus 950. The apparatus 950 may be designed to operate and/or perform any and all of the described functions automatically and without operator intervention. Vehicle position data may then be received by the vehicle position receiver system 960 and/or at the vehicle position system receiver 14, respectively. The vehicle position data may then be processed at the computer 970 of the apparatus 950 and/or at the computer 31 of the vehicle position system receiver 14.

In this manner, the apparatus 950 can serve to provide control over, and monitor the functions of, the apparatus 1 for a vehicle or for a plurality of vehicles, and further, the apparatus 950 provides the means by which to allow a central security office or local or regional law enforcement office or agency to exercise and/or perform control, monitoring and/or security functions over the vehicles which are registered therewith. The apparatus and method of the present invention may also be utilized to monitor the operational status, operation and/or state or status of a one or more of the various vehicle systems, components and/or devices. In the case where the apparatus 1 is automatically activated, as described above, the apparatus 1 can transmit a signal, indicative of vehicle theft and/or an unauthorized use or operation of the vehicle, to the apparatus 950 thereby reporting the unauthorized use or operation, or theft, before the authorized user or operator is able to discover same.

The apparatus 950 may also be utilized so as to verify and monitor apparatus accessing and/or activation by the authorized user or operator. The authorized user or operator may "call" the

line service and/or the Internet and/or the Web Site 954 of the World Wide Web.

Data access and command code data, as well as other data, may also be transmitted by the authorized user or operator, via the respective apparatus transmitters to the receiver 953 of the server 952 and/or to the Web Site 954.

The server 952 can perform complete control, monitoring and/or security functions on, or over, the apparatus 1, the apparatus 950, the vehicle, and/or each of the vehicle systems. The apparatus and method of the present invention may be equipped with software and hardware for providing a systematic check of any and all of the apparatus and vehicle systems, including the status or state of the vehicle equipment systems, equipment, devices and/or appliances and provide data relating thereto to the user or operator and/or to the authorized individual(s) at the above-described central security office. The server transmitter 957 can transmit control signals and/or other data, including information to the authorized user or operator and to the apparatus 1 and/or to the apparatus 950. It is also envisioned that the server 952 and the computer 970 may be combined into a single central computer system.

In the above manner, the apparatus and method of the present invention provides a remote-controlled control, monitoring and/or security system, or vehicle anti-theft and/or vehicle recovery apparatus and method, for use in conjunction with an on-line service and/or on, or over, the Internet and/or the World Wide Web or other suitable communication network or medium. In this manner, the apparatus and method of the present invention also provides for a remote-controlled control, monitoring and/or security system

which provides visual, video, graphical, audio and/or audible information to the user. Use over the Internet and/or the World Wide Web and/or other related communication systems and/or mediums and/or over on-line services provides for global coverage, control, monitoring and/or security for the vehicle.

In yet another alternate embodiment, the present invention is utilized in conjunction with a marine vessel or vehicle. Figure 12 illustrates an alternate embodiment of the present invention, wherein the apparatus and method is utilized in conjunction with a boat. In Figure 12, the apparatus is denoted generally by the reference numeral 1200. While the boat described below is a motor-powered boat, it is important to note that any type of boat, including, but not limited to sailboats, may also be utilized in conjunction with the present invention.

In Figure 12, the components of the apparatus 1200 which are common to the apparatus 1 of Figure 1 are designated by the same reference numerals. In Figure 12, the CPU 4 is electrically connected and/or linked to the boat ignition system 1207, which is located externally from the apparatus 1200. The CPU 4 may or may not be connected and/or linked with the boat ignition system 1207 through an ignition system interface 1208 which is also shown in Figure 12. The CPU 4 may transmit signals to, as well as receive signals from, the boat ignition system 1207. In this manner, the CPU 4 and the boat ignition system 1207, may exchange information between each other. In this manner, the CPU 4, upon receiving an appropriate signal from the receiver 3, and upon the completion of the requisite data processing routine(s), may issue an electrical, an electronic, and/or any other suitable signal, including a digital command signal, to the boat ignition system 1207. This electrical, electronic and/or other suitable signal, or digital

0027935.022099

00000562260

command signal, may be one which will disable the boat ignition system 1207 or one which will re-enable or reset the boat ignition system 1207. The CPU 4 may also interrogate the boat ignition system 1207 and/or receive data from the boat ignition system 1207 which is indicative of boat ignition system status (i.e., whether the boat ignition system 1207 is on or off).

In the preferred embodiment, the CPU 4 is also electrically connected and/or linked to the boat fuel pump system 1209 which is also located externally from the apparatus 1. The CPU 4 may or may not be connected and/or linked with the boat fuel pump system 1209 through a fuel pump system interface 1210 which is also shown in Figure 12. In the case of an electrical or an electronic fuel pump system, the CPU 4 may provide an electrical, an electronic, and/or other suitable signal, including a digital signal, which will disable or re-enable the boat fuel pump system 1209.

In the case of a mechanical fuel pump system, the CPU 4 may provide an electrical, electronic, and/or other suitable signal, including a digital signal, which will disable or re-enable an electrical valve system, which may be used to control the operation of the mechanical fuel pump system. Whichever the case may be, the CPU 4 will be capable of issuing an electrical, electronic and/or other suitable signal, including a digital signal, to disable or to re-enable the boat fuel pump system 1209. The CPU 4 may also interrogate and/or receive data from the boat fuel pump system 1209 which is indicative of boat fuel pump system status (i.e., whether the boat fuel pump system 1209 is on or off). The CPU 4 may also be electrically connected and/or linked to an appropriate device (not shown) for controlling the operation of a boat exhaust system.

108

as to prevent any tampering with the apparatus 1 or with other systems and/or components of the boat.

sub. N2

The boat equipment system(s) 1211 may also include any one or more of the widely known boat anti-theft systems and may also include a boat recovery system or device, including a homing and/or a tracking system, each of which system(s) may be activated by the apparatus 1200 of the present invention. The boat equipment system(s) 1211 may also include communication devices, such as two-way radios, radios, televisions, navigational devices and/or equipment, fire extinguishing equipment, pumping devices for pumping water out of the boat, radar devices and equipment, emergency and/or distress signal equipment, sonar devices and/or equipment, and any electrical, electronic and/or otherwise activated appliances and/or equipment which may be utilized on a boat. Appliances may include household appliances such as refrigerators, stoves, air conditioners, ovens, microwave ovens, lighting systems, etc. The boat equipment system(s) 11 may also include systems for detecting failures in any of the above or any other equipment systems and report such failures to the user or operator whether he or she is operating the boat or is not onboard the boat and/or for reporting such failures to a central office.

The boat equipment system(s) 1211 may also include video recording and/or photographing equipment, which may include video recording device(s) and/or a camera(s), such as those utilized in conjunction with personal computers, televisions, digital televisions, interactive televisions, display telephones, video telephones, and/or other communication devices, including personal communication devices, or a still picture camera(s). The video recording device(s) or camera(s) may be digital recording devices or cameras or other suitable devices or cameras, including typical

0927935 103999
66620 562260

video recording devices or cameras. The video recording device(s) or camera(s), in a preferred embodiment, has associated therewith a transceiver or transmitter/receiver system for transmitting video images recorded by the video recording device(s) or camera(s) to the user or operator and for receiving signals such as, for example, control signals, by which the user or operator may exercise control over the video recording device(s) or camera(s).

The video recording device(s) or camera(s) may be located at any location on the interior of the boat such as, for example, in the cabin, cockpit, and/or passenger compartment of the boat so that the user or operator, or any other authorized individual, may observe and/or photograph the operator of the boat, or the occupants and/or cargo of the boat. The video recording(s) or camera(s) may also be located on the boat exterior. The video recording device(s) or camera(s) may have wide angles for maximum angular viewing and may also be pivotable and/or movable. The video recording device(s) or camera(s) may record and/or transmit the recorded video and/or the picture(s) in real time and/or live. The video recording device(s) or camera(s) may also be equipped with a storage medium, for storing the recorded video and/or picture(s), and a transmitter or transceiver for transmitting the stored video and/or picture(s) to the user or operator at a later time. In this manner, real-time, as well as deferred, video and/or picture(s) transmissions may be provided.

The boat equipment system(s) 1211 may also include audio recording equipment, which may include audio recording device(s) such as microphones and/or tape recorders, such as those utilized in conjunction with personal computers, televisions, digital televisions, interactive televisions, telephones, cellular telephones, display telephones, video telephones, and/or other

09277935.032999

function. The monitoring device(s), in a preferred embodiment, has associated therewith a transceiver or transmitter/receiver system for transmitting data and/or information recorded and/or read by the monitoring device(s) to the user or operator and for receiving signals such as, for example, control signals, by which the user or operator may exercise control over the monitoring device(s).

As noted above, the use of any one or more of the boat equipment system(s) 1211, and their associated interface devices 1212, may be optional. Further, wireless devices may be utilized for any of the devices utilized in conjunction with the apparatus 1200.

The boat equipment system(s) 1211 receives signals from the CPU 4, which signals serve to activate or de-activate, or vice versa, whichever the case may be, the respective boat equipment system(s) which are utilized in conjunction with the apparatus 1200. The boat equipment system(s) 1211 may also include any other suitable boat system or equipment feature which may be utilized to draw attention to the boat and/or in some other way to impede boat theft. It should be noted that any of the interface devices 1208, 1210 and 1212 may include any of the requisite interfacing circuitry which may be necessary to facilitate CPU 4 control over the respective systems which may be utilized.

The apparatus 1200 also comprises a position and locating device 13 which can be utilized in order to determine the position and/or the location of the boat. The position and locating device 13 can be utilized so as to determine the position of the boat anywhere in the world and provide for the transmission of boat position and/or location data to any appropriate system receiver so

00277935-032909

that the boat may be located and/or tracked and recovered. In the preferred embodiment, the position and locating device 13 comprises and utilizes a global positioning device and an associated transmitter for transmitting position and/or location data to the authorized user or operator and/or to an authorized office or agency authorized to receive and/or to monitor such data transmissions.

The apparatus 1200 of Figure 12 also comprises a position and locating system receiver 14, which may be employed by the authorized user or operator and/or by the authorized office or agency, for receiving and/or processing the data which is transmitted from the position and locating device 13 as described above. The apparatus of may also comprise a user interface device (not shown).

The apparatus and method of the alternate embodiment of Figure 12 may be utilized and/or operates in the same or in a similar and/or analogous manner as described above with regards to the embodiments of Figures 1-11B and/or consistent with the description of the various embodiments and features of the present invention as described herein. The apparatus and method of the present invention may also provide for the immediate, and/or for the deferred, control, activation, deactivation, programming, monitoring and/or security of any one or more of the boat and/or marine vessel or vehicle systems, equipment, devices, appliances, etc., in the same, similar and/or analogous manner as described above with its use in conjunction with vehicles and/or motor vehicles.

Although the present invention has been hereinabove described as being utilized in conjunction with a boat, it is noted

114

0022930362260

that the present invention may be utilized in conjunction with a ship, cruise ship, or any other boat, manned or unmanned, regardless of size, shape or form, private, commercial and/or military. The boat equipment systems may also include guns and/or weapon systems and/or self-defense systems and/or electronic warfare systems. The present invention may also be utilized in conjunction with submersible vehicles such as submarines.

In yet another alternate embodiment, the present invention is utilized in conjunction with an aircraft, airplane, jet or helicopter. Figure 13 illustrates an alternate embodiment of the present invention, wherein the apparatus and method is utilized in conjunction with an airplane. The apparatus of Figure 13 is denoted generally by the reference numeral 1300. In Figure 13, the components of the apparatus which are common to the apparatus 1 of Figure 1 are designated by the same reference numerals. In Figure 13, the CPU 4 is electrically connected and/or linked to the airplane ignition system 1307, which is located externally from the apparatus 1300. The CPU 4 may or may not be connected and/or linked with the airplane ignition system 1307 through an ignition system interface 1308 which is also shown in Figure 13.

The CPU 4 may transmit signals to, as well as receive signals from, the airplane ignition system 1307. In this manner, the CPU 4 and the airplane ignition system 1307, may exchange information between each other. In this manner, the CPU 4, upon receiving an appropriate signal from the receiver 3, and upon the completion of the requisite data processing routine, may issue an electrical, an electronic, and/or any other suitable signal, including a digital command signal, to the airplane ignition system 1307. This electrical, electronic and/or other suitable signal, or digital command signal, may be one which will disable the airplane

115

092793 022990

The CPU 4, in the preferred embodiment, is also electrically connected to at least one or more of an airplane equipment system(s) 1311. The airplane equipment system(s) 1311 are located externally from the apparatus 1300 and may or may not be connected to the CPU 4, via an airplane equipment system(s) interface device(s) 1312 which may or may not be required for each one of the variety or multitude of the airplane equipment systems which may be utilized in conjunction with the apparatus 1300.

The airplane equipment system(s) 1311 may include a loud siren or alarm, which may be located in the cabin, passenger compartment and/or cockpit of the airplane and, which may produce a loud piercing sound so as to make it unbearable for an intruder to remain inside the airplane cabin, passenger compartment and/or cockpit. The airplane equipment system(s) 1311 may also include an external siren or alarm, which may produce a loud piercing sound, which may be utilized to draw attention to the airplane. The airplane equipment system(s) 1311 may also include a horn, which may blare continuously or intermittently, so as to also draw attention to the airplane.

The airplane external light system(s), which may include the airplane head lights, tail lights or flashers, which may be constantly illuminated or which may blink on and off repeatedly so as to draw attention to the airplane, may also be utilized as a airplane equipment system 1311. The airplane equipment system(s) 1311 may also include a power door or hatch locking system or device, for securing the airplane cabin, passenger compartment and/or cockpit so as to prevent an unauthorized entry thereunto or an exit therefrom. In addition, the airplane equipment system(s) 1311 may include a locking system, such as a mechanical locking system, for preventing an unauthorized access into the airplane

engine compartment so as to prevent tampering with the apparatus 1300 or with other systems and/or components of the airplane.

Sub. N3

The airplane equipment system(s) 11 may also include any one or more of the widely known airplane anti-theft systems and may also include a airplane recovery system or device, including a homing and/or a tracking system, each of which system(s) may be activated by the apparatus 1300 of the present invention. The airplane equipment system(s) 1311 may also include landing gear, communication devices, such as two-way radios, radios, televisions, navigational devices and/or equipment, fire extinguishing equipment, radar devices and equipment, emergency and/or distress signal equipment, sonar devices and/or equipment, and any electrical, electronic and/or otherwise activated appliances and/or equipment which may be utilized on an airplane. Appliances may include household appliances such as refrigerators, stoves, air conditioners, ovens, microwave ovens, lighting systems, etc. The airplane equipment system(s) 1311 may also include systems for detecting failures in any of the above or any other equipment systems and report such failures to the user or operator whether he or she is operating the airplane or is not onboard the airplane and/or for reporting such failures to a central office.

The airplane equipment system(s) 1311 may also include video recording and/or photographing equipment, which may include video recording device(s) and/or a camera(s), such as those utilized in conjunction with personal computers, televisions, digital televisions, interactive televisions, display telephones, video telephones, and/or other communication devices, including personal communication devices, or a still picture camera(s). The video recording device(s) or camera(s) may be digital recording devices or cameras or other suitable devices or cameras, including typical

000000000000000000

telephones, display telephones, video telephones, and/or other communication devices, including personal communication devices. The audio recording device(s) may be digital audio recording devices or other suitable audio devices including typical audio recording devices. The audio recording device(s), in a preferred embodiment, has associated therewith a transceiver or transmitter/receiver system for transmitting the recorded audio to the user or operator and for receiving signals such as, for example, control signals, by which the user or operator may exercise control over the audio recording device(s).

The audio recording device(s) may be located at any location on the interior and/or exterior of the airplane so that the user or operator, or any other authorized individual, may hear what is transpiring, and/or what has transpired, inside and/or outside the airplane. The audio recording device(s) may also be pivotable and/or movable. The audio recording device(s) may record and/or transmit the recorded audio in real time and/or live. The audio recording device(s) may also be equipped with a storage medium, for storing the recorded audio, and a transmitter or transceiver for transmitting the stored audio at a later time. In this manner, real-time as well as deferred audio transmissions may be provided.

The airplane equipment system(s) 1311 may also include an intercom system or device or telephone, cellular, digital, or otherwise for providing a means by which to allow the user or operator, or other authorized operator, to communicate with the operator and/or occupants of the airplane. The airplane equipment system(s) 1311 may also include monitoring device(s) for reading and/or monitoring the airplane fuel supply, water and/or coolant supply, electrical generator and/or alternator operation, battery charge level, and/or engine or motor temperature level, airplane

120

0827793 03299
066250 562260

flight control systems and/or any other airplane operation and/or system function. The monitoring device(s), in a preferred embodiment, has associated therewith a transceiver or transmitter/receiver system for transmitting data and/or information recorded and/or read by the monitoring device(s) to the user or operator and for receiving signals such as, for example, control signals, by which the user or operator may exercise control over the monitoring device(s).

As noted above, the use of any one or more of the airplane equipment system(s) 1311, and their associated interface devices 1312, may be optional. Further, as described above, wireless devices may be utilized.

The airplane equipment system(s) 1311 receives signals from the CPU 4, which signals serve to activate or de-activate, or vice versa, whichever the case may be, the respective airplane equipment system(s) which are utilized in conjunction with the apparatus 1300. The airplane equipment system(s) 1311 may also include any other suitable airplane system or equipment feature which may be utilized to draw attention to the airplane and/or in some other way to impede the airplane theft. It should be noted that any of the interface devices 1308, 1310 and 1312 may include any of the requisite interfacing circuitry which may be necessary to facilitate CPU 4 control over the respective systems which may be utilized.

The apparatus 1300 also comprises a position and locating device 13 which can be utilized in order to determine the position and/or the location of the airplane. The position and locating device 13 can be utilized so as to determine the position of the airplane anywhere in the world and provide for the transmission of

121

00000000000000000000

airplane position and/or location data to any appropriate system receiver so that the airplane may be located and/or tracked and recovered. In the preferred embodiment, the position and locating device 13 comprises and utilizes a global positioning device and an associated transmitter for transmitting position and/or location data to the authorized user or operator and/or to an authorized office or agency authorized to receive and/or to monitor such data transmissions.

The apparatus 1300 also comprises a position and locating system receiver 14, which may be employed by the authorized user or operator and/or by the authorized office or agency, for receiving and/or processing the data which is transmitted from the position and locating device 13 as will be described above. The apparatus 1 may also comprise a user interface device (not shown).

The apparatus and method of the alternate embodiment of Figure 13 may be utilized and/or operates in the same or in a similar and/or analogous manner as described above with regards to the embodiments of Figures 1-12 and/or consistent with the description of the various embodiments and features of the present invention as described herein.

The apparatus and method of the present invention may also provide for the immediate, and/or for the deferred, control, activation, deactivation, programming, monitoring and/or security of any one or more of the airplane systems, equipment, devices, appliances, etc., in the same, similar and/or analogous manner as described herein.

Although the present invention has been hereinabove described as being utilized in conjunction with an airplane, it is

122

noted that the present invention may be utilized in conjunction with any aircraft, including airplanes, jets, gliders, spacecraft, space shuttles, satellites, manned or unmanned, regardless of size, shape or form, private, commercial and/or military. The airplane equipment systems may also include guns and/or weapon systems and/or self-defense systems and/or electronic warfare systems.

In yet another alternate embodiment, the present invention is utilized in conjunction with a snowmobile, jetski or recreational vehicle. Figure 14 illustrates an alternate embodiment of the present invention wherein the apparatus is utilized in conjunction with a snowmobile. The apparatus of Figure 14 is denoted generally by the reference numeral 1400. In Figure 14, the components of the apparatus 1400 which are common to the apparatus 1 of Figure 1 are designated by the same reference numerals. In Figure 14, the CPU 4 is electrically connected and/or linked to the snowmobile ignition system 1407, which is located externally from the apparatus 1. The CPU 4 may or may not be connected and/or linked with the snowmobile ignition system 1407 through an ignition system interface 1408 which is also shown in Figure 14.

The CPU 4 may transmit signals to, as well as receive signals from, the snowmobile ignition system 1407. In this manner, the CPU 4 and the snowmobile ignition system 1407, may exchange information between each other. In this manner, the CPU 4, upon receiving an appropriate signal from the receiver 3, and upon the completion of the requisite data processing routine, may issue an electrical, an electronic, and/or any other suitable signal, including a digital command signal, to the snowmobile ignition system 1407. This electrical, electronic and/or other suitable signal, or digital command signal, may be one which will disable

123

0027936 0220990

00277935.032999

the snowmobile ignition system 1407 or one which will re-enable or reset the snowmobile ignition system 1407. The CPU 4 may also interrogate the snowmobile ignition system 1407 and/or receive data from the snowmobile ignition system 1407 which is indicative of ignition system status (i.e., whether the snowmobile ignition system 1407 is on or off).

In the preferred embodiment, the CPU 4 is also electrically connected and/or linked to the snowmobile fuel pump or supply system 1409 which is also located externally from the apparatus 1400. The CPU 4 may or may not be connected and/or linked with the snowmobile fuel pump system 1409 through a fuel pump system interface 1410 which is also shown in Figure 14. In the case of an electrical or an electronic fuel pump system, the CPU 4 may provide an electrical, an electronic, and/or other suitable signal, including a digital signal, which will disable or re-enable the snowmobile fuel pump system 1409.

In the case of a mechanical fuel pump system, the CPU 4 may provide an electrical, electronic, and/or other suitable signal, including a digital signal, which will disable or re-enable an electrical valve system, which may be used to control the operation of the mechanical fuel pump system. Whichever the case may be, the CPU 4 will be capable of issuing an electrical, electronic and/or other suitable signal, including a digital signal, to disable or to re-enable the snowmobile fuel pump system 1409. The CPU 4 may also interrogate and/or receive data from the snowmobile fuel pump system 1409 which is indicative of snowmobile fuel pump system status (i.e., whether the snowmobile fuel pump system 1409 is on or off). The CPU 4 may also be electrically connected and/or linked to an appropriate device (not shown) for controlling the operation of a snowmobile exhaust system.

124

66660"5662260

The CPU 4, in the preferred embodiment, is also electrically connected and/or linked to at least one or more of a snowmobile equipment system or system(s) 1411. The snowmobile equipment system(s) 1411 are located externally from the apparatus 1400 and may or may not be connected to the CPU 4, via a snowmobile equipment system interface 1412 which may or may not be required for each one of the variety or multitude of the snowmobile equipment systems which may be utilized in conjunction with the apparatus.

The snowmobile equipment system(s) 1411 may include a loud siren or alarm, which may be located in, or on, the passenger compartment of the snowmobile and, which may produce a loud piercing sound so as to make it unbearable for an intruder to remain inside or on the snowmobile. The snowmobile equipment system(s) 1411 may also include an external siren or alarm, which may produce a loud piercing sound, which may be utilized to draw attention to the snowmobile. The snowmobile equipment system(s) 1411 may also include a horn, which may blare continuously or intermittently, so as to also draw attention to the snowmobile.

The snowmobile light system(s), which may include the snowmobile head lights, tail lights or flashers, which may be constantly illuminated or which may blink on and off repeatedly so as to draw attention to the snowmobile, may also be utilized as a snowmobile equipment system 1411. The snowmobile equipment system(s) 1411 may also include a power locking systems and/or devices as appropriate as well as steering mechanism locking devices, locking devices for preventing unauthorized access into or onto the snowmobile, snowmobile track locking devices for preventing movement of the snowmobile and/or locking devices for preventing unauthorized access to the snowmobile engine, so as to

175

prevent any tampering with the apparatus or with other systems and/or components of the snowmobile.

The snowmobile equipment system(s) 1411 may also include any one or more of the known snowmobile anti-theft systems and may also include a snowmobile recovery system or device, including a homing and/or a tracking system, each of which system(s) may be activated by the apparatus of the present invention. The snowmobile equipment system(s) 1411 may include any other equipment systems, including any and all of the above-noted equipment systems described herein for use in conjunction with vehicles, boats and airplanes, including video and/or audio recording equipment and/or intercom equipment and/or any of the herein-described communications systems and/or devices.

The snowmobile equipment system(s) 1411 may also include monitoring device(s) for reading and/or monitoring the snowmobile fuel supply, water and/or coolant supply, electrical generator and/or alternator operation, battery charge level, and/or engine or motor temperature level, snowmobile control system and/or any other snowmobile operation and/or system function. The monitoring device(s), in a preferred embodiment, has associated therewith a transceiver or transmitter/receiver system for transmitting data and/or information recorded and/or read by the monitoring device(s) to the user or operator and for receiving signals such as, for example, control signals, by which the user or operator may exercise control over the monitoring device(s).

As noted above, the use of any one or more of the snowmobile equipment system(s) 1411, and their associated interface devices 1412, may be optional. Further, as described above, wireless devices may also be utilized.

0927935 032099

The snowmobile equipment system(s) 1411 receives signals from the CPU 4, which signals serve to activate or de-activate, or vice versa, whichever the case may be, the respective snowmobile equipment system(s) which are utilized in conjunction with the apparatus 1400. The snowmobile equipment system(s) 1411 may also include any other suitable snowmobile system or equipment feature which may be utilized to draw attention to the snowmobile and/or in some other way impede the snowmobile theft. It should be noted that any of the interface devices 1408, 1410 and 1412 may include any of the requisite interfacing circuitry which may be necessary to facilitate CPU 4 control over the respective systems which may be utilized.

The apparatus 1400 also comprises a position and locating device 13 which can be utilized in order to determine the position and/or the location of the snowmobile. The position and locating device 13 can be utilized so as to determine the position of the snowmobile anywhere in the world and provide for the transmission of position and/or location data to any appropriate system receiver so that the snowmobile may be located and/or tracked and recovered. In the preferred embodiment, the position and locating device 13 comprises and utilizes a global positioning device and an associated transmitter for transmitting position and/or location data to the authorized user or operator and/or to an authorized office or agency authorized to receive and/or to monitor such data transmissions.

The apparatus 1400 of Figure 14 also comprises a position and locating system receiver 14, which may be employed by the authorized user or operator and/or by the authorized office or agency, for receiving and/or processing the data which is transmitted from the snowmobile position and locating device 13 as

092793 032999
000000 562260

monitoring and/or security functions pertaining to motor vehicle equipment and home systems, equipment and appliances.

In still another alternate embodiment, the present invention can be utilized in conjunction with a residential premises, residential building and/or a home or a household control system. Figure 15 illustrates an alternate embodiment of the present invention wherein the apparatus and method is utilized in conjunction with a home control system. The apparatus of Figure 15 is denoted generally by the reference numeral 1500. It is understood that, while the embodiment of Figure 15 is illustrated and described in conjunction with a home or a household system, the apparatus 1500 may be utilized in any residential premises and/or any residential building.

In Figure 15, the components of the apparatus 1500 which are common to the apparatus 1 of Figure 1 are designated by the same reference numerals. In Figure 15, the CPU 4 is electrically connected and/or linked to the home and/or household central electrical system 1507, which is located externally from the apparatus 1500. The CPU 4 may or may not be connected and/or linked with the home central electrical system 1507 through a central electrical system interface 1508 which is also shown in Figure 15.

The CPU 4 may transmit signals to, as well as receive signals from, the home central electrical system 1507. In this manner, the CPU 4 and the home central electrical system 1507, may exchange information between each other. In this manner, the CPU 4, upon receiving an appropriate signal from the receiver 3, and upon the completion of the requisite data processing routine, may issue an electrical, an electronic, and/or any other suitable

0327935-03299

disable or to re-enable the home central air conditioning system 1511. The CPU 4 may also interrogate and/or receive data from the home central air conditioning system 1511 which is indicative of home central air conditioning system status (i.e., whether the central air conditioning system 1511, or any portion thereof, is on or off).

The CPU 4 may also be electrically connected and/or linked to the home water system 1513 which is also located externally from the apparatus 1500. The CPU 4 may or may not be connected and/or linked with the home water system 1513 through a home water system interface 1514 which is also shown in Figure 15. The home water system interface 1514, in the preferred embodiment, is an electrically controlled water shut-off valve(s) or similar device(s). The CPU 4 is capable of issuing an electrical, electronic and/or other suitable signal, including a digital signal, to disable or to re-enable the home water system 1513. The CPU 4 may also interrogate and/or receive data from the home water system 1513 which is indicative of the state of the home water system 1513 (i.e. whether the home water system 1513 , or any portion thereof, is on or off). The home water system 1513 may then be controlled (i.e. turned on or off) and/or adjusted by the user or operator.

The CPU 4 may also be electrically connected and/or linked to the home thermostat or environmental control system 1517 so as to control and/or monitor home interior temperature. The CPU 4 may or may not be connected and/or linked with the home thermostat system 1517 through a home thermostat system interface 1518 which is also shown in Figure 15. The CPU 4 is capable of issuing an electrical, electronic and/or other suitable signal, including a digital signal, to disable or to re-enable the home thermostat

131

00000564260

system 1517. The CPU 4 may also interrogate and/or receive data from the home thermostat system 1517 which is indicative of the state of the home thermostat system 1517 (i.e. home interior temperature and/or whether the temperature of the home interior, or any portion thereof, is too hot, too cold, or acceptable). The home thermostat system 1517 may then be controlled and/or adjusted by the user or operator. In this manner, the home thermostat system 1517 may then be adjusted and/or controlled by the user or operator via the apparatus 1500. The home thermostat system 1517 may be connected and/or linked to the home central heating system 1509 and/or to the home central air conditioning system 1511 so as to activate, de-activate, set and/or control the operation of these systems, as necessary, in order to, and so as to, achieve the desired temperature and/or environmental conditions in the home.

The CPU 4, in the preferred embodiment, is also electrically connected and/or linked to at least one or more of a home equipment system(s) 1515. The home equipment system(s) 1515 are located externally from the apparatus 1500 and may or may not be connected and/or linked to the CPU 4, via a home system equipment system or systems interface 1516 which may or may not be required for each one of the variety or multitude of the home equipment system(s) 1515 which may be utilized in conjunction with the apparatus 1500.

The home equipment system(s) 1515 may include a home anti-theft and/or burglary alarm system, a loud siren or alarm, which may be located in the interior of the home, which may produce a loud piercing sound so as to make it unbearable for an intruder to remain inside the home, an exterior siren or alarm, which may produce a loud piercing sound, which may be utilized to draw attention to the home and exterior lighting system(s) and interior lighting systems, which lighting systems may be turned on or turned

off at the user or operator's discretion and which may be controlled to blink on and off to draw attention to the home.

The home equipment system(s) 1515 may also include a electrical and/or electronically controlled locking devices for doors and/or windows, including electrical and/or electronic dead-bolt locking systems and devices, electrical systems for controlling electrical circuits or systems room-by-room, device-by-device, and/or appliance-by-appliance. The home equipment system(s) 1515 may also include devices for controlling any one or more of the electrical circuits, such as circuits controlled by fuses, circuit breakers or equivalent devices. The home equipment system(s) 1515 may also include devices for controlling and/or monitoring hot water heaters, garage door openers, lawn sprinkler systems, electric fences and/or fencing, in-ground or above-ground pool equipment, filters and/or heaters, home central water valve, individual room water valve, home fire detector equipment and home fire extinguishment equipment. Home equipment system(s) 1515 may also include power door and window closing, locking and opening equipment.

The home equipment system(s) 1515 may also include any and all of a wide variety of home appliances such as televisions, telephones, telephone answering machines, alarm systems, VCRs, stoves, ovens, microwave ovens, door bells, individual lights or lamps, blenders, toasters, personal computers, word processors, stereos, radios, and any other home appliance and/or device which is electrically and/or electronically activated and/or controllable.

The home equipment system(s) 1515 may also include video recording and/or photographing equipment, which may include video

0927935 022000

and/or transmit the recorded video and/or the picture(s) in real time and/or live. The video recording device(s) or camera(s) may also be equipped with a storage medium, for storing the recorded video and/or picture(s), and a transmitter or transceiver for transmitting the stored video and/or picture(s) to the owner or occupant at a later time. In this manner, real-time, as well as deferred, video and/or picture(s) transmissions may be provided.

The home equipment system(s) may also include audio recording equipment, which may include audio recording device(s) such as microphones and/or tape recorders, such as those utilized in conjunction with personal computers, televisions, digital televisions, interactive televisions, telephones, cellular telephones, display telephones, video telephones, and/or other communication devices, including personal communication devices. The audio recording device(s) may be digital audio recording devices or other suitable audio devices including typical audio recording devices. The audio recording device(s), in a preferred embodiment, has associated therewith a transceiver or transmitter/receiver system for transmitting the recorded audio to the owner or occupant and for receiving signals such as, for example, control signals, by which the owner or occupant may exercise control over the audio recording device(s).

The audio recording device(s) may be located at any location on the interior and/or exterior of the home and/or residential premises so that the owner or occupant, or any other authorized individual, may hear what is transpiring, and/or what has transpired, inside and/or outside the home and/or residential premises. The audio recording device(s) may also be pivotable and/or movable. The audio recording device(s) may record and/or transmit the recorded audio in real time and/or live. The audio

135

09277935 0322099

recording device(s) may also be equipped with a storage medium, for storing the recorded audio, and a transmitter or transceiver for transmitting the stored audio at a later time. In this manner, real-time as well as deferred audio transmissions may be provided.

The home equipment system(s) 1515 may also include an intercom system or device or a telephone, cellular, digital or otherwise for providing a means by which to allow the user or operator, or other authorized operator, to communicate with the persons present in, or occupants of, the home. The home equipment system(s) 1515 may also include monitoring device(s) for reading and/or monitoring the home fuel supply, water supply, electrical generator and/or alternator operation, water usage, heat and/or air conditioning usage, electricity usage, gas and/or oil or other fuel usage, telephone usage and charges, appliance usage, etc, a home control system and/or any other home operation and/or system function. The monitoring device(s), in a preferred embodiment, may have associated therewith a transceiver or transmitter/receiver system for transmitting data and/or information recorded and/or read by the monitoring device(s) to the user or operator and for receiving signals such as, for example, control signals, by which the user or operator may exercise control over the monitoring device(s).

As noted above, the use of any one or more of the home equipment system(s) 1515 and/or appliances or devices and their associated interface devices 1516, may be optional. The interface devices 1516 may be wireless devices or modules which need not be directly connected to the CPU 4 or to its respective equipment system. In this regard, hard-wired connections are not necessary. In the case of wireless interface devices or modules 1516, corresponding wireless technology and/or systems may be utilized to

system status (i.e., whether the central electrical system 1607, or any portion thereof, is on or off).

In the preferred embodiment, the CPU 4 is also electrically connected and/or linked to the commercial office and/or premises central heating system 1609 which is also located externally from the apparatus 1600. The CPU 4 may or may not be connected and/or linked with the central heating system 1609 through a central heating system interface 1610 which is also shown in Figure 16. The CPU 4 is capable of issuing an electrical, electronic and/or other suitable signal, including a digital signal, to disable or to re-enable the central heating system 1609. The CPU 4 may also interrogate and/or receive data from the central heating system 1609 which is indicative of central heating system status (i.e., whether the central heating system 1609, or any portion thereof, is on or off).

In the preferred embodiment, the CPU 4 is also electrically connected and/or linked to the commercial office and/or premises central air conditioning system 1611 which is also located externally from the apparatus 1600. The CPU 4 may or may not be connected and/or linked with the central air conditioning system 1611 through a central air conditioning system interface 1612 which is also shown in Figure 16. The CPU 4 is capable of issuing an electrical, electronic and/or other suitable signal, including a digital signal, to disable or to re-enable the central air conditioning system 1611. The CPU 4 may also interrogate and/or receive data from the central air conditioning system 1611 which is indicative of central air conditioning system status (i.e., whether the central air conditioning system 1611, or any portion thereof, is on or off).

The CPU 4 may also be electrically connected and/or linked to the commercial office and/or premises water system 1613 which is also located externally from the apparatus 1600. The CPU 4 may or may not be connected and/or linked with the water system 1613 through a commercial office and/or premises water system interface 1614 which is also shown in Figure 16. The water system interface 1614, in the preferred embodiment, is an electrically controlled water shut-off valve(s) and/or device(s). The CPU 4 is capable of issuing an electrical, electronic and/or other suitable signal, including a digital signal, to disable or to re-enable the water system 1613. The CPU 4 may also interrogate and/or receive data from the water system 1613 which is indicative of the state of the water system (i.e. whether the water system, or any portion thereof, is on or off). The commercial office and/or premises water system 1613 may then be adjusted and/or controlled (i.e. turned on or off) by the user or operator.

The CPU 4 may also be electrically connected and/or linked to the commercial office and/or premises thermostat system 1617 which is also located externally from the apparatus 1600. The CPU 4 may or may not be connected and/or linked with the thermostat system 1617 through a commercial office and/or premises thermostat system interface 1618 which is also shown in Figure 16. The CPU 4 is capable of issuing an electrical, electronic and/or other suitable signal, including a digital signal, to disable or to re-enable the thermostat system 1617. The CPU 4 may also interrogate and/or receive data from the thermostat system 1617 which is indicative of the temperature of the commercial office and/or premises interior (i.e., the interior temperature and/or whether interior temperature, or any portion thereof, is too hot, too cold, or acceptable). The thermostat system 1617 may then be adjusted and/or controlled by the user or operator. The thermostat system

locking devices for doors and/or windows, including electric or electronic dead-bolt locking devices or systems, electrical systems for controlling electrical circuits or systems room-by-room, device-by-device, and/or appliance-by-appliance.

The commercial office and/or premises equipment system(s) 1615 may also include devices for controlling any one or more of the electrical circuits, such as circuits controlled by fuses, circuit breakers or equivalent devices. The commercial office and/or premises equipment system(s) 1615 may also include devices for controlling and/or monitoring hot water heaters, garage door openers, lawn sprinkler systems, electric fences and/or fencing, in-ground or above-ground pool equipment, fountain equipment, filters and/or heaters, commercial office and/or premises fire detector equipment and commercial office and/or premises fire extinguishment equipment. Commercial office and/or premises equipment system(s) 1615 may also include power door and window closing, locking and opening equipment.

The commercial office and/or premises equipment system(s) 1615 may also include any and all office equipment and/or premises appliances such as televisions, telephones, telephone answering machines, alarm systems, VCRs, stoves, ovens, microwave ovens, door bells, individual lights or lamps, blenders, toasters, computers and associated peripherals, word processors, stereos, radios, manufacturing equipment and any other commercial office and/or premises appliances and/or devices which are electrically and/or electronically activated and/or controllable.

The commercial office and/or premises equipment system(s) 1615 may also include video recording and/or photographing equipment, which may include video recording device(s) and/or a

00000000000000000000

00000000000000000000000000000000

camera(s), such as those utilized in conjunction with personal computers, televisions, digital televisions, interactive televisions, display telephones, video telephones, and/or other communication devices, including personal communication devices, or a still picture camera(s). The video recording device(s) or camera(s) may be digital recording devices or cameras or other suitable devices or cameras, including typical video recording devices or cameras. The video recording device(s) or camera(s), in a preferred embodiment, has associated therewith a transceiver or transmitter/receiver system for transmitting video images recorded by the video recording device(s) or camera(s) to the owner or occupant and for receiving signals such as, for example, control signals, by which the owner or occupant may exercise control over the video recording device(s) or camera(s).

The video recording device(s) or camera(s) may be located at any location on the interior of the commercial office and/or premises such as, for example, in any room or rooms of the commercial office and/or premises so that the owner or occupant, or any other authorized individual, may observe and/or photograph any portions and/or rooms in the interior of the commercial office and/or premises, or the occupants and/or anything which may be located and/or stored in the commercial office and/or premises. The video recording device(s) or camera(s) may also be located on the exterior of the commercial office and/or premises so that the owner or occupant, or any other authorized individual, may observe and/or photograph the exterior of the commercial office and/or premises, or portion thereof, or the individuals or objects and/or anything which may be present, located and/or stored on the premises of commercial office and/or premises.

145

0027935-02299

The video recording device(s) or camera(s) may have wide angles for maximum angular viewing and may also be pivotable and/or movable. The video recording device(s) or camera(s) may record and/or transmit the recorded video and/or the picture(s) in real time and/or live. The video recording device(s) or camera(s) may also be equipped with a storage medium, for storing the recorded video and/or picture(s), and a transmitter or transceiver for transmitting the stored video and/or picture(s) to the owner or occupant at a later time. In this manner, real-time, as well as deferred, video and/or picture(s) transmissions may be provided.

The commercial office and/or premises equipment system(s) 1615 may also include audio recording equipment, which may include audio recording device(s) such as microphones and/or tape recorders, such as those utilized in conjunction with personal computers, televisions, digital televisions, interactive televisions, telephones, cellular telephones, display telephones, video telephones, and/or other communication devices, including personal communication devices. The audio recording device(s) may be digital audio recording devices or other suitable audio devices including typical audio recording devices. The audio recording device(s), in a preferred embodiment, has associated therewith a transceiver or transmitter/receiver system for transmitting the recorded audio to the owner or occupant and for receiving signals such as, for example, control signals, by which the owner or occupant may exercise control over the audio recording device(s).

The audio recording device(s) may be located at any location on the interior and/or exterior of the commercial office and/or premises so that the owner or occupant, or any other authorized individual, may hear what is transpiring, and/or what has

00000 502200

transpired, inside and/or outside the commercial office and/or premises.

The audio recording device(s) may also be pivotable and/or movable. The audio recording device(s) may record and/or transmit the recorded audio in real time and/or live. The audio recording device(s) may also be equipped with a storage medium, for storing the recorded audio, and a transmitter or transceiver for transmitting the stored audio at a later time. In this manner, real-time as well as deferred audio transmissions may be provided.

The commercial office and/or premises equipment system(s) 1615 may also include an intercom system or device or telephone, cellular, digital or otherwise, for providing a means by which to allow the user or operator, or other authorized individual, to communicate with the persons present in the, or occupants of the, commercial office and/or premises.

The commercial office and/or premises equipment system(s) 1615 may also include monitoring device(s) for reading and/or monitoring the commercial office and/or premises fuel supply, water supply, electrical generator and/or alternator operation, water usage, heat and/or air conditioning usage, electricity usage, gas and/or oil or other fuel usage, telephone usage and charges, commercial office and/or premises equipment and/or appliance usage, etc, a commercial office and/or premises control system and/or any other commercial office and/or premises operation and/or system function. The monitoring device(s), in a preferred embodiment, has associated therewith a transceiver or transmitter/receiver system for transmitting data and/or information recorded and/or read by the monitoring device(s) to the user or operator and for receiving signals such as, for example, control signals, by which

the user or operator may exercise control, monitoring and/or security over the monitoring device(s).

As noted above, the use of any one or more of the commercial office and/or premises equipment systems and/or appliances or devices 1615 and their associated interface devices 1616, may be optional. The interface devices 1616 may be wireless devices or modules which need not be directly connected to the CPU 4 or to its respective equipment system. In this regard, wired connections are not necessary. In the case of wireless interface devices or modules 1616, corresponding wireless technology and/or systems must be utilized to provide for the wireless control and operation of the respective equipment(s).

The commercial office and/or premises equipment system or system(s) 1615 receives signals from the CPU 4, which signals serve to activate or de-activate, or vice versa, whichever the case may be, the respective commercial office and/or premises equipment system(s) which are utilized in conjunction with the apparatus 1600. The commercial office and/or premises equipment system(s) 1615 may also include any other suitable commercial office and/or premises system or equipment feature which may be utilized to draw attention to the commercial office and/or premises and/or in some other way impede commercial office and/or premises theft. It should be noted that any of the interface devices may include any of the requisite interfacing circuitry which may be necessary to facilitate CPU 4 control over the respective systems, equipment, devices and/or appliances which may be utilized.

The apparatus and method of the alternate embodiment of Figure 16 is utilized and operates in the manner described above in conjunction with the vehicle and/or the home embodiments so as to

027793-13299
666260 SE 62260

provide for a system for controlling, monitoring and/or providing security functions for and over a commercial office and/or premises. The apparatus and method of the alternate embodiment of Figure 16 may be utilized and/or operates in the same or in a similar and/or analogous manner consistent with the description of the various embodiments and features of the present invention as described herein so as to provide control, monitoring and/or security functions over and with respect to the commercial office and/or premises with which the apparatus is utilized in conjunction with.

In the case of mobile commercial office and/or premises, the apparatus 1600 may also comprise a commercial office and/or premises position and locating device 13 which can be utilized in order to determine the position and/or the location of the commercial office and/or premises. The position and locating device 13 can be utilized so as to determine the position of the commercial office and/or premises anywhere in the world and provide for the transmission of position and/or location data to any appropriate system receiver so that the commercial office and/or premises may be located and/or tracked and recovered. In the preferred embodiment, the position and locating device 13 comprises and utilizes a global positioning device and an associated transmitter for transmitting position and/or location data to the authorized user, operator, and/or authorized individual.

The apparatus 1600 also comprises a commercial offices and/or premises position and locating system receiver 14, which may be employed by the authorized user, operator, and/or authorized individual, for receiving and/or processing the data which is transmitted from the position and locating device 13 as described

above. The apparatus 1 may also comprise a user interface device (not shown).

The apparatus and method of the alternate embodiment of Figure 16 is utilized and operates in the manner described above in conjunction with the vehicle and/or the home premises embodiments so as to provide for a system for controlling, monitoring and/or providing security functions for, and over, a commercial office and/or premises. The apparatus and method of the alternate embodiment of Figure 16 may be utilized and/or operates in the same or in a similar and/or analogous manner as described in conjunction with the various embodiments described herein and/or consistent with the description of the various embodiments and features of the present invention as described herein, so as to provide control, monitoring and/or security functions for, and over, a commercial office and/or premises.

In this manner, an owner, occupant, and/or authorized individual, may access a commercial office and/or premises system at any time and from any location and thereby exercise and/or perform control, monitoring and/or security functions over any commercial office and/or premises system, equipment, device and/or appliance. The owner, occupant, and/or authorized individual, may also monitor the status, state or operation of any commercial office and/or premises system, equipment, device and/or appliance. Lastly, the owner or authorized individual may perform security related functions or operations on and over the commercial office and/or premises system, equipment, device and/or appliance.

The apparatus and method of Figure 16 can provide for an immediate, as well as for a deferred, control, activation, de-activation, programming, monitoring and/or security functions

150

0027935.022999

and/or responses thereto, of, and for, any one or more of the commercial office and/or premises systems, equipment, devices, appliances, etc., in the same, similar and/or analogous manner as described above with in conjunction with the various embodiments.

As described above in conjunction with use of the apparatus and method of the present invention with vehicles and residential premises, the present invention may, if desired, perform a test in order to determine the state or status of any particular system, equipment, device and/or appliance before exercising and/or performing a given control, monitoring and/or security function. Depending upon the outcome of the test, the apparatus and method of the present invention may execute, alter, and/or defer, the performance and/or the execution of the control, monitoring and/or security function. For example, a command to shut-off a central electrical system may be deferred until after the operation of a security system, which security system may be deemed to have priority in performing a monitoring and shut-down procedure for the entire commercial office and/or premises, has been successfully completed.

As noted above, the present invention, in any of the herein described embodiments, as well as modifications, variations and/or alternate embodiments thereof, may be utilized in conjunction with a telephone, including analog and digital telephones, a touch-tone telephone, a cordless telephone and/or a cellular or mobile telephone, a home and/or a personal computer having associated telecommunication devices or other suitable peripheral device(s) such as a modem and/or a fax/modem, or other personal communication devices, which can operate over an appropriate telecommunications system, and/or other suitable communications systems, including

151

000005267260

radio signal, optical, satellite and/or other communications systems.

The communications system(s) utilized in any of the embodiments described herein may operate anywhere in the electromagnetic and/or the radio spectrum. In this regard, personal communication service (PCS) systems and devices, including stationary, portable and/or hand-held devices, may also be utilized. Digital signal communications devices and/or systems, including digital satellite systems, may also be utilized. Interactive and/or digital televisions, personal communication devices, personal communications services (PCS) devices, telephones, including telephones which utilize analog or digital technology, personal digital assistants, cellular telephones, display telephones, video telephones, display cellular telephones and electronically equipped watches, beepers, pagers or paging systems, and/or other devices and/or personal effects and/or accessories may also be utilized for interactive use and/or for the display or output applications and/or functions. In this regard, the apparatus and method of the present invention may be utilized on, or over, the Internet and/or the World Wide Web, or other suitable communication network or medium, in order to control, monitor and/or provide security functions on, or for, any of the herein described vehicles, marine vessels or vehicles, aircraft, recreational vehicles, residential premises and/or commercial premises.

It is also envisioned that the apparatus and method of the present invention may find applications in areas other than those described and illustrated above. The present invention may find application in any type of control, monitoring and/or security system or the like, wherein a long-range remote-controlled and/or

152

092793 02200
00220 5262260

interactive system may be utilized in order to provide an immediate, or a deferred, response to a control, monitoring and/or security function, or response thereto, and/or to exercise and/or provide control, monitoring or security over desired items and/or devices from a remote location. The present invention may also be utilized to monitor and/or track the whereabouts or location of various objects and/or systems. In this regard, the apparatus and method of the present invention may be utilized so as to monitor the whereabouts and/or location of individuals and to provide for a means by which to communicate with them.

The apparatus and method of the present invention may be utilized in conjunction with appropriate security devices for preventing access by unauthorized individuals. In this regard, the apparatus and method of the present invention may be utilized in conjunction with appropriate security access devices, secured and/or encrypted communication signals, linkups and mediums. Security measures may include utilization and processing of access codes, encrypted codes, personal identification codes and/or data, software-based security measures and/or devices, hardware-based security measures and/or devices, and/or any combination of software-based and hardware-based measures and/or devices. The security measures and/or methods utilized may also include the use of signal scramblers and associated de-scramblers, and/or any one or more of the widely known devices and/or methods for providing a secured communication system and/or link.

The present invention provides for an apparatus and method for exercising and/or performing remote-controlled control, monitoring and/or security functions and/or operations for any type and variety of vehicles, motor vehicles, marine vessels and

vehicles, aircraft, recreational vehicles, residential premises and/or commercial premises.

The apparatus and method of the present invention may also be programmable for programmed and/or automatic activation, self-activation, programmed and/or automatic operation and/or self-operation. The apparatus and method of the present invention may provide for an immediate, as well as for a deferred, control, monitoring and/or security function, and/or response thereto, so as to provide for the immediate and/or for the deferred control, activation, de-activation, programming, monitoring and/or security, etc., of any one or more of the respective systems, equipment, devices, appliances, etc., which may be utilized in any of the above described embodiments and/or in any modifications, variations and/or alternate embodiments thereof.

The present invention may also be equipped with, and be utilized with, hardware and software necessary for providing self-monitoring functions, automatic control and/or responses to occurrences, providing automatic notice of an occurrence and/or a situation to an owner, user and/or authorized individual. In this regard, any and all of the embodiments described above may comprise a monitoring device, a triggering device and/or any other suitable device for detecting an occurrence and/or a situation which may warrant providing notice to an owner, user and/or authorized operator. In this regard, the apparatus may provide a transmission of any appropriate signal from a transmitter and, if desired, from a voice synthesizer to the owner, user and/or authorized individual, or to the location of the individual. The signal utilized could be in the form of a communication transmission, depending upon the communication medium utilized, a telephone call, a voice message, a beeper and/or pager message, an Electronic mail

002793603200

message, a fax transmission, and/or any other mode of communication which may be utilized with any of the apparatuses, devices and/or components described herein.

Any of the above-described embodiments may be utilized in conjunction with a central security office and/or agency for providing use in conjunction with such a central office and/or agency as described hereinabove. In this manner, each and every embodiment of the present invention may be utilized with a central security office and/or agency. The present invention may also provide a means for occupants of the vehicle, motor vehicle, marine vessel, aircraft, recreational vehicle, residential premises and/or commercial premises to contact a central security office and/or agency and/or any other individual having corresponding communication equipment and/or who is authorized and/or equipped to receive such transmissions.

The present invention enables an owner, user and/or authorized individual, to exercise and/or perform convenient control, monitoring and/or security functions, as and/or operations, over any of the above described or similar objects, vehicles, vessels and/or premises, from a remote location. For example, an individual may conveniently provide control over and monitor, the state and/or status of a vehicle parked at a location distant from his present location, and provide control over and monitor, a boat, an airplane, a vacation home which may be located in another locale, and/or to provide control over and monitor, a business office after hours or while absent therefrom.

The present invention, in any of the embodiments described herein, may be designed to be user-friendly. In this regard, the present invention may be menu-driven, and/or its operation may be

menu-selected, from audio menus, visual menus, or both audio and visual menus.

While the present invention has been described and illustrated in various preferred and alternate embodiments, such descriptions are merely illustrative of the present invention and are not to be construed to be limitations thereof. In this regard, the present invention encompasses any and all modifications, variations and/or alternate embodiments with the scope of the present invention being limited only by the claims which follow.

002793 03299

CLAIMS

WHAT IS CLAIMED IS:

1. A remote-controlled control, monitoring and/or security apparatus, which comprises:

a control device for controlling the operation of said apparatus; and

an activation device for activating said control device,

wherein said activation device activates an operation of said control device, and further wherein said control device generates a signal for at least one of controlling, monitoring, securing, disabling and re-enabling at least one of a system, equipment and device of at least one of a vehicle, a marine vehicle, an aircraft, a recreational vehicle, a residential premises and a commercial premises.

2. The apparatus of claim 1, wherein said activation device further comprises:

a transmitter; and

a receiver.

3. The apparatus of claim 2, wherein said transmitter is a telephone signal transmitter.

4. The apparatus of claim 2, wherein said receiver is a telephone signal receiver.

NY2-72943.1

00000562260

0927936 032099

5. The apparatus of claim 1, which further comprises:

a positioning device, which further comprises:

a global positioning device for one of determining and calculating data indicative of position; and

a position data transmitter for transmitting said position data.

6. The apparatus of claim 1, which further comprises:

a device for one of detecting and reporting a theft situation.

7. The apparatus of claim 1, wherein said activation device is one of a telecommunication device and a computer system.

8. The apparatus of claim 7, wherein said activation system further comprises:

a transmitter for transmitting an activation signal to said control device; and

a receiver for receiving said position data from said positioning device.

9. The apparatus of claim 1, wherein said at least one of a system, equipment and device is one of a vehicle ignition system, a vehicle fuel pump system, a vehicle exhaust system, a vehicle light system, a vehicle alarm system, a vehicle anti-theft system,

00000564260

a vehicle recovery system, a vehicle door lock system, a vehicle surveillance system, a premises anti-theft system, a premises electrical system, a premises heating system, a premises water system and a premises thermostat system.

10. The apparatus of claim 1, which further comprises:

a network computer;

a receiver for said network computer, wherein said receiver is a telephone signal receiver;

a transmitter for said network computer, wherein said transmitter is a telephone signal transmitter,

wherein said network computer is linked to said activation device via a telecommunication system,

wherein said receiver receives a signal from at least one of said activation device and said control device, and further wherein said transmitter transmits a signal to at least one of said activation device and said control device, and further wherein said control device at least one of controls, monitors and secures at least one of said apparatus, system, equipment and device.

11. The apparatus of claim 1, wherein said activation device is at least one of a programmable device, an automatically activated device, and a self-activated device, and further wherein said apparatus further comprises:

a device for providing notification of an event by at least one of a telephone call to a primary location to, a telephone call

00000"562260

to a secondary or alternate location to, a telephone call to a business location to, a facsimile transmission to, an electronic mail message transmission^A to, a beeper message to and a pager message to at least one of a user, operator, occupant, authorized office and authorized individual.

12. The apparatus of claim 1, wherein said apparatus operates one of on and over the Internet^A, the World Wide Web and a communication system servicing personal communication services devices.

13. A remote-controlled control, monitoring and/or security apparatus, which comprises:

a first control device;

a second control device; and

an activation device^A, wherein said activation device activates at least one of said first control device and said second control device,

wherein one of said first control device and said second control device generates a signal for at least one of controlling, monitoring, securing, disabling and re-enabling at least one of a system, equipment and device for at least one of a vehicle, a marine vehicle, an aircraft, a recreational vehicle, a residential premises and a commercial premises.

14. The apparatus of claim 13, wherein said activation device further comprises:^A

00000562200

a transmitter; and

a receiver.

15. The apparatus of claim 14, wherein said transmitter is a telephone signal transmitter.

16. The apparatus of claim 14, wherein said receiver is a telephone signal receiver.

17. The apparatus of claim 13, which further comprises:

a network computer, wherein said network computer is linked to at least one of said first control device, said second control device and said activation device, and further wherein said network computer is directly accessible by a user of said apparatus;

a network computer receiver; and

a network computer transmitter,

wherein said network computer receiver receives signals from at least one of a user, operator, occupant of one of a vehicle and premises, said activation device, said first control device and said second control device, and further wherein said network computer transmitter transmits a signal to at least one of said activation device, said first control device and said second control device, and further wherein said network computer at least one of controls, monitors and secures at least one of said apparatus, a vehicle ignition system, a vehicle fuel pump system, a vehicle exhaust system, a vehicle light system, a vehicle alarm system, a vehicle anti-theft system, a vehicle recovery system, a

000220 562260

vehicle door lock system, a vehicle surveillance system, a premises anti-theft system, a premises electrical system, a premises heating system, a premises water system and a premises thermostat system.

18. The apparatus of claim 13, wherein said network computer is a server computer utilized one of on and over one of the Internet, the World Wide Web and a communication system which services personal communication services devices.

19. A method for remote-controlled control, monitoring and/or security, comprising the steps of :

activating a control device; and

generating a signal for at least one of controlling, monitoring, securing, disabling and re-enabling at least one of a system, equipment and device of at least one of a vehicle, a marine vehicle, an aircraft, a recreational vehicle, a residential premises and a commercial premises.

20. The method of claim 19, further comprising the step of:

generating one of a confirmation and a notification signal to notify one of an individual, a machine and a computer that the control, monitoring, securing, disabling and re-enabling function has been carried out and that said function is at least one of successful and unsuccessful.

ABSTRACT OF THE DISCLOSURE

A remote-controlled control, monitoring and/or security apparatus, which comprises a control device for controlling the operation of the apparatus, and an activation device for activating the control device. The activation device activates an operation of the control device and the control device generates a signal for at least one of controlling, monitoring, securing, disabling and re-enabling at least one of a system, equipment and device of at least one of a vehicle, a marine vehicle, an aircraft, a recreational vehicle, a residential premises and a commercial premises.

0927935.032099

As a below named inventor, I hereby declare that:

My residence, post office address and citizenship are as stated below next to my name.

I believe I am the original, first and sole inventor (if only one name is listed below) or an original, first and joint inventor (if plural names are listed below) of the subject matter which is claimed and for which a patent is sought on the invention entitled:

REMOTE-CONTROLLED CONTROL, MONITORING AND/OR SECURITY APPARATUS AND METHOD FOR VEHICLES, MOTOR VEHICLES, MARINE VESSELS AND VEHICLES, AIRCRAFT, RECREATIONAL VEHICLES, RESIDENTIAL PREMISES AND/OR COMMERCIAL PREMISES

the specification of which (check only one item below)

is attached hereto

was filed as United States application

Serial No. _____

on _____

and was amended

on _____ (if applicable).

was filed as PCT international application

Number _____

on _____

and was entered under PCT Article 19

on _____ (if applicable).

I hereby state that I have reviewed and understand the contents of the above-identified specification, including the claims, as amended by an amendment referred to above.

I acknowledge the duty to disclose information which is material to the examination of this application in accordance with Title 37, Code of Federal Regulations § 1.56(a).

I hereby claim foreign priority benefits under Title 35, United States Code, §119 of any foreign application(s) for patent or inventor's certificate or of any PCT international application(s) designating at least one country other than the United States of America listed below and have also identified below any foreign application(s) for patent or inventor's certificate or any PCT international application(s) designating at least one country other than the United States of America filed by me on the same subject matter having a filing date before that of the application(s) of which priority is claimed:

PRIOR FOREIGN/PCT APPLICATION(S) AND ANY PRIORITY CLAIMS UNDER 35 U.S.C. 119:

| Country (If PCT, indicate "PCT") | Application Number | Date of Filing (day, month, year) | Priority claimed under 35 USC 119 |

VERIFIED STATEMENT (DECLARATION) CLAIMING SMALL ENTITY STATUS (37 CFR 1.9(f) and 1.27(b)) - INDEPENDENT INVENTOR

Attorney's Docket No. RJ008

Applicant or Patentee: RAYMOND ANTHONY JOAO
Serial or Patent No.: _____
Filed or Issued: _____

For: REMOTE-CONTROLLED CONTROL, MONITORING AND/OR SECURITY APPARATUS AND METHOD FOR VEHICLES, MOTOR VEHICLES, MARINE VEHICLES AND VEHICLES, AIRCRAFT, RECREATIONAL VEHICLES, RESIDENTIAL PREMISES AND/OR COMMERCIAL PREMISES

As a below named inventor, I hereby declare that I qualify as an independent inventor as defined in 37 CFR 1.9(c) for purposes of paying reduced fees under section 41(a) and (b) of Title 35, United States Code, to the Patent and Trademark Office with regard to the invention entitled described in REMOTE-CONTROLLED CONTROL, MONITORING AND/OR SECURITY APPARATUS AND METHOD FOR VEHICLES, MOTOR VEHICLES, MARINE VEHICLES AND VEHICLES, AIRCRAFT, RECREATIONAL VEHICLES, RESIDENTIAL PREMISES AND/OR COMMERCIAL PREMISES

- the specification filed herewith
- application Serial No. _____, filed _____
- Patent No. _____, issued _____

I have not assigned, granted, conveyed or licensed and am under no obligation under contract or law to assign, grant convey or license, any rights in the invention to any person who could not be classified as an independent inventor under 37 CFR 1.9(c) if that person had made the invention, or to any concern which would not qualify as a small business concern under 37 CFR 1.9(d) or a nonprofit organization under CFR 1.9(e).

Each person, concern or organization to which I have assigned, granted, conveyed, or licensed or am under an obligation under contract or law to assign, grant, convey, or license any rights in the invention is listed below:

- no such person, concern, or organization
- persons, concerns or organizations listed below*

*NOTE: Separate verified statements are required from each named person, concern or organization having rights to the invention averring to their status as small entities. (37 CFR 1.27)
