(57) **ABSTRACT**

An electronic information access system and associated methods. In one exemplary embodiment, the system comprises an antenna adapted to receive electromagnetic energy, the electromagnetic energy encoding first data associated with at least one person; and processing apparatus in signal communication with the antenna. The processing apparatus is configured to: access a first database containing second data relating to the one or more certain persons; analyze at least portions of the first data and the second data to determine if the at least one person is authorized to access the information; and if the at least one person is authorized access, facilitate download of the information to a personal electronic device (PED) of the at least one person.
