Study Status

1. Protocol changes (as per [REDACTED] email)

- Annual Relapse Rate at 2 years will be the primary endpoint. Proportion relapsing will move to a secondary endpoint.
- Addition of 480 mg dose arm. Increase in number of patients is off-set by decrease in changing the endpoint. N stays about the same.
- 301 becomes a 1:1:1, 302 becomes a 1:1:1:1
- Avonex will be offered as rescue therapy (after 48 wks) once a patient has had two relapses ("banking" of a relapse will be removed, now relapses will count from the moment a patient enters the trial).

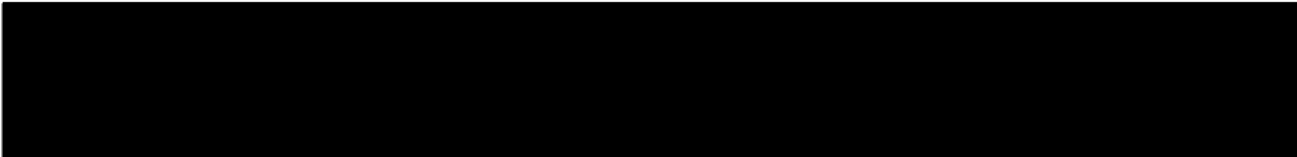

CRO Kick-Off Meeting/Investigator Meeting Update

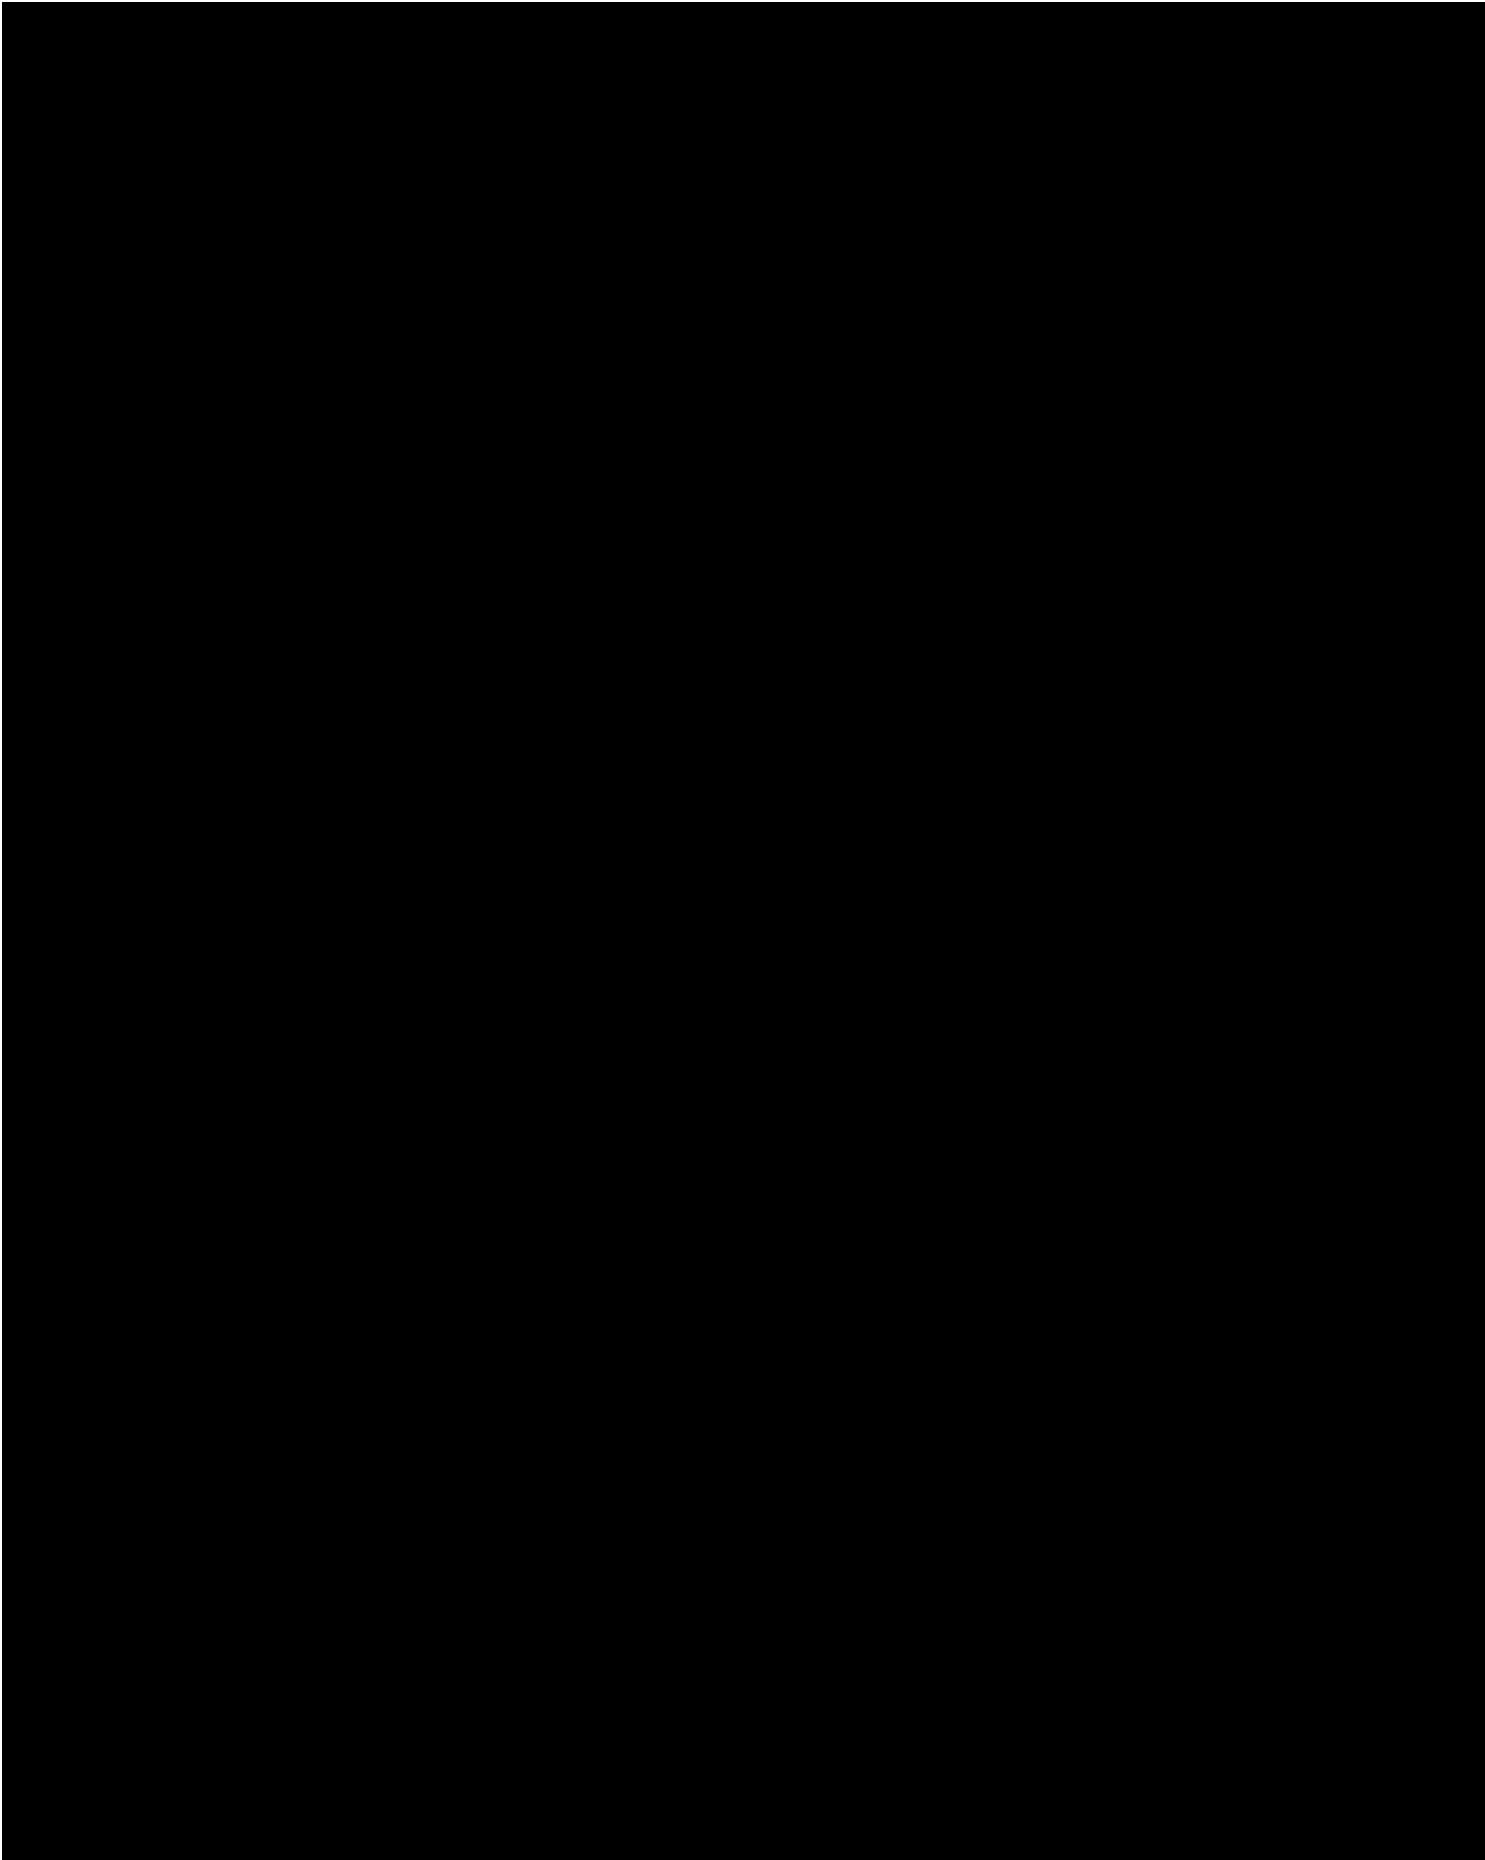

- Kick off is tentatively planned for October 3rd and 4th in the UK office. Date will depend on when protocol is signed off.

Action: ■ to update team on details

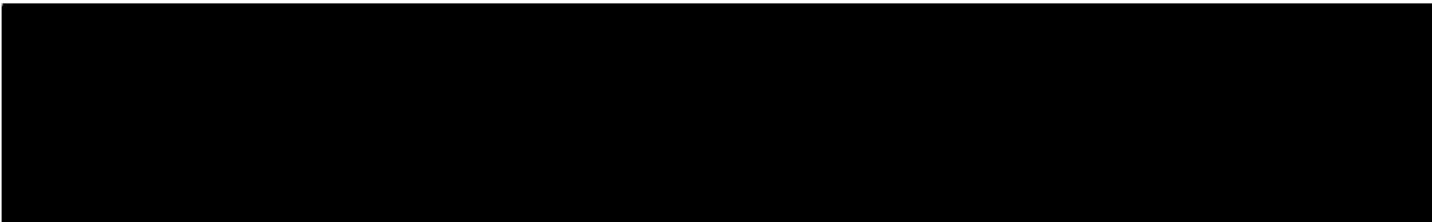

- Investigator meeting planned for end of January / early February, depending on protocol sign off.

Action: ■ to follow up with meeting planner for ideas on venues close to a large international airport.
