ABOUT THE AUTHORS

Ramez A. Elmasri is an associate professor of computer science at the University of Texas at Arlington. His research interests include object-oriented databases and distributed systems, data modeling and query languages, and temporal databases. Well known for his research in extending the entity-relationship model, Professor Elmasri's current work focuses on incorporating time in database systems. In the 1980s as a principal research scientist at Honeywell's Computer Sciences Center in Minnesota, he worked on the design and implementation of a prototype distributed database management system: DDTS. He is a contributing author to *Temporal Databases: Theory Design and Implementation* and has published over 40 papers on database theory and design.

Shamkant B. Navathe is a professor of computing at the Georgia Institute of Technology. His research contributions include database modeling, database conversion, logical database design, distributed database design, and database integration. He has been a consultant to major computer vendors including Honeywell, Siemens, and DEC. Professor Navathe is an associate editor of the Association for Computing Machinery's *Computing Surveys*, and is the editor of Benjamin/Cummings' Series on Database Systems and Applications. Widely published, he is also the coauthor of *Conceptual Database Design: An Entity-Relationship Approach*.

BRIEF CONTENTS

PART I BASIC CONCEPTS

CHAPTER 1 Databases and Database Users 1
CHAPTER 2 Database System Concepts and Architecture 23
CHAPTER 3 Data Modeling Using the Entity-Relationship Approach 39
CHAPTER 4 Record Storage and Primary File Organizations 69
CHAPTER 5 Index Structures for Files 103

PART II RELATIONAL MODEL, LANGUAGES, AND SYSTEMS

CHAPTER 6 The Relational Data Model and Relational Algebra 137
CHAPTER 7 SQL—A Relational Database Language 185
CHAPTER 8 The Relational Calculus, QUEL, and QBE 231
CHAPTER 9 A Relational Database Management System—DB2 259

PART III CONVENTIONAL DATA MODELS AND SYSTEMS

CHAPTER 10 The Network Data Model and the IDMS System 287
CHAPTER 11 The Hierarchical Data Model and the IMS System 343

DOCKET ALARM
Find authenticated court documents without watermarks at docketalarm.com.

PART IV DATABASE DESIGN

CHAPTER 12 Functional Dependencies and Normalization for Relational Databases 391
CHAPTER 13 Relational Database Design Algorithms and Further Dependencies 423
CHAPTER 14 Overview of the Database Design Process 447

PART V SYSTEM IMPLEMENTATION TECHNIQUES

CHAPTER 15 The System Catalog 479
CHAPTER 16 Query Processing and Optimization 491
CHAPTER 17 Transaction Processing Concepts 527
CHAPTER 18 Concurrency Control Techniques 555
CHAPTER 19 Recovery Techniques 577
CHAPTER 20 Database Security and Authorization 595

PART VI ADVANCED DATA MODELS AND EMERGING TRENDS

CHAPTER 21 Advanced Data Modeling Concepts 611
CHAPTER 22 Object-Oriented Databases 663
CHAPTER 23 Distributed Databases and Client–Server Architecture 703
CHAPTER 24 Deductive Databases 729
★ CHAPTER 25 Emerging Database Technologies and Applications 761

APPENDIX A Alternative Diagrammatic Notations 801
APPENDIX B Parameters of Disks 805
APPENDIX C Comparison of Data Models and Systems 809

Bibliography 817
Index 849

★ represents that this chapter may be omitted for an introductory course

CONTENTS

PART I BASIC CONCEPTS

CHAPTER 1 Databases and Database Users 1
1.1 Introduction 1
1.2 An Example 4
1.3 Characteristics of the Database Approach 4
1.4 Actors on the Scene 8
1.5 Workers Behind the Scene 11
★1.6 Intended Uses of a DBMS 11
★1.7 Implications of the Database Approach 15
★1.8 When Not to Use a DBMS 16
1.9 Summary 17

Review Questions 18
Exercises 18
Selected Bibliography 19

CHAPTER 2 Database System Concepts and Architecture 23
2.1 Data Models, Schemas, and Instances 23
2.2 DBMS Architecture and Data Independence 26
2.3 Database Languages and Interfaces 29
★2.4 The Database System Environment 31
★2.5 Classification of Database Management Systems 34
2.6 Summary 36

★ represents sections that may be left out for a less detailed treatment of the chapter

DOCKET ALARM

Explore Litigation Insights

Docket Alarm provides insights to develop a more informed litigation strategy and the peace of mind of knowing you're on top of things.

Real-Time Litigation Alerts

Keep your litigation team up-to-date with **real-time alerts** and advanced team management tools built for the enterprise, all while greatly reducing PACER spend.

Our comprehensive service means we can handle Federal, State, and Administrative courts across the country.

Advanced Docket Research

With over 230 million records, Docket Alarm's cloud-native docket research platform finds what other services can't. Coverage includes Federal, State, plus PTAB, TTAB, ITC and NLRB decisions, all in one place.

Identify arguments that have been successful in the past with full text, pinpoint searching. Link to case law cited within any court document via Fastcase.

Analytics At Your Fingertips

Learn what happened the last time a particular judge, opposing counsel or company faced cases similar to yours.

Advanced out-of-the-box PTAB and TTAB analytics are always at your fingertips.

API

Docket Alarm offers a powerful API (application programming interface) to developers that want to integrate case filings into their apps.

LAW FIRMS
Build custom dashboards for your attorneys and clients with live data direct from the court.

Automate many repetitive legal tasks like conflict checks, document management, and marketing.

FINANCIAL INSTITUTIONS
Litigation and bankruptcy checks for companies and debtors.

E-DISCOVERY AND LEGAL VENDORS
Sync your system to PACER to automate legal marketing.
