(57) **ABSTRACT**

(\* ) Notice: Subject to any disclaimer, the term of this patent is extended or adjusted under 35 U.S.C. 154(b) by 0 days.

The method includes steps for creating and or modifying the organizational structure and data content of a frame-based, hierarchical product database with the use of tabularly arranged product data. The method features steps for enabling determination of a hierarchical database organizational structure capable of accommodating importation of tabular product data. Additionally, the method feature steps for facilitating either modification of an existing organizational structure where the database already exists, or, creation of a new frame-based, hierarchical organizational structure suitable for receiving the tabular data by generating an entirely new, original structure where none is available. In a first preferred form, the method is implemented in computer software and features program steps for enabling a database administrator, or the like, to determine what frame-based, hierarchical organizational structure would be needed to enable importation of tabular product data, the term "product" embracing both goods and or services. The method features steps for displaying to the database administrator the tabularly organized product data, and, where available, the organizational structure of an existing frame-based, hierarchical database. In a second preferred form, the method features software steps for automatically generating the required frame-based, hierarchical organizational structure where the tabular data includes the product record category and subcategory information necessary to define the organizational structure required to accommodate importation of the tabular data. Further, the method includes software steps for automatically associating the tabular product record information at the lowest level of the frame-based, organizational structure generated.

# Explore Litigation Insights

Docket Alarm provides insights to develop a more informed litigation strategy and the peace of mind of knowing you're on top of things.

## Real-Time Litigation Alerts

Keep your litigation team up-to-date with **real-time alerts** and advanced team management tools built for the enterprise, all while greatly reducing PACER spend.

Our comprehensive service means we can handle Federal, State, and Administrative courts across the country.

## Advanced Docket Research

With over 230 million records, Docket Alarm's cloud-native docket research platform finds what other services can't. Coverage includes Federal, State, plus PTAB, TTAB, ITC and NLRB decisions, all in one place.

Identify arguments that have been successful in the past with full text, pinpoint searching. Link to case law cited within any court document via Fastcase.

## Analytics At Your Fingertips

Learn what happened the last time a particular judge, opposing counsel or company faced cases similar to yours.

Advanced out-of-the-box PTAB and TTAB analytics are always at your fingertips.

## API

Docket Alarm offers a powerful API (application programming interface) to developers that want to integrate case filings into their apps.

## LAW FIRMS

Build custom dashboards for your attorneys and clients with live data direct from the court.

Automate many repetitive legal tasks like conflict checks, document management, and marketing.

## FINANCIAL INSTITUTIONS

Litigation and bankruptcy checks for companies and debtors.

## E-DISCOVERY AND LEGAL VENDORS

Sync your system to PACER to automate legal marketing.
