

HIGHLIGHTS OF PRESCRIBING INFORMATION

These highlights do not include all the information needed to use LAMICTAL XR safely and effectively. See full prescribing information for LAMICTAL XR.

LAMICTAL XR (lamotrigine) Extended-Release Tablets
Initial U.S. Approval: 1994

WARNING: SERIOUS SKIN RASHES

See full prescribing information for complete boxed warning. Cases of life-threatening serious rashes, including Stevens-Johnson syndrome and toxic epidermal necrolysis, and/or rash-related death have been caused by lamotrigine. The rate of serious rash is greater in pediatric patients than in adults. Additional factors that may increase the risk of rash include (5.1):

- coadministration with valproate
 - exceeding recommended initial dose of LAMICTAL XR
 - exceeding recommended dose escalation for LAMICTAL XR.
- Benign rashes are also caused by lamotrigine; however, it is not possible to predict which rashes will prove to be serious or life threatening. LAMICTAL XR should be discontinued at the first sign of rash, unless the rash is clearly not drug related. (5.1)

RECENT MAJOR CHANGES

Indications and Usage, Monotherapy (1.2) April 2011
Dosage and Administration, Conversion from Adjunctive Therapy to Monotherapy (2.3) April 2011
Warnings and Precautions, Aseptic Meningitis (5.6) October 2010

INDICATIONS AND USAGE

LAMICTAL XR is an antiepileptic drug (AED) indicated for:

- adjunctive therapy for primary generalized tonic-clonic (PGTC) seizures and partial onset seizures with or without secondary generalization in patients ≥ 13 years of age. (1.1)
- conversion to monotherapy in patients ≥ 13 years of age with partial seizures who are receiving treatment with a single AED. (1.2)
- Limitation of use: Safety and effectiveness in patients less than 13 years of age have not been established. (1.3)

DOSAGE AND ADMINISTRATION

- Do not exceed the recommended initial dosage and subsequent dose escalation. (2.1)
- Initiation of adjunctive therapy and conversion to monotherapy requires slow titration dependent on concomitant AEDs; the prescriber must refer to the appropriate algorithm in Dosage and Administration (2.2, 2.3)
 - Adjunct therapy target therapeutic dose range is 200 to 600 mg daily and is dependent on concomitant AEDs. (2.2)
 - Conversion to monotherapy: Target therapeutic dosage range is 250 to 300 mg daily. (2.3)
- Conversion from immediate-release lamotrigine to LAMICTAL XR: The initial dose of LAMICTAL XR should match the total daily dose of the immediate-release lamotrigine. Patients should be closely monitored for seizure control after conversion. (2.4)
- Do not restart LAMICTAL XR in patients who discontinued due to rash unless the potential benefits clearly outweigh the risks. (2.1, 5.1)
- Adjustments to maintenance doses are likely in patients starting or stopping estrogen-containing oral contraceptives. (2.1, 5.8)
- Discontinuation: Taper over a period of at least 2 weeks (approximately 50% dose reduction per week). (2.1, 5.9)

DOSAGE FORMS AND STRENGTHS

Extended-release tablets: 25 mg, 50 mg, 100 mg, 200 mg, and 300 mg. (3.1, 16)

CONTRAINDICATIONS

Hypersensitivity to the drug or its ingredients. (Boxed Warning, 4)

WARNINGS AND PRECAUTIONS

- Life-threatening serious rash and/or rash-related death: Discontinue at the first sign of rash, unless the rash is clearly not drug related. (Boxed Warning, 5.1)
- Fatal or life-threatening hypersensitivity reaction: Monitor for early signs of hypersensitivity (e.g., fever, lymphadenopathy), which may present without rash; if signs present, patient should be evaluated immediately. Discontinue LAMICTAL XR if alternate etiology is not found. (5.2)
- Acute multiorgan failure has resulted (some cases fatal). Monitor for hypersensitivity signs with multiple organ dysfunction. (5.3)
- Blood dyscrasias (e.g., neutropenia, thrombocytopenia, pancytopenia): May occur, either with or without an associated hypersensitivity syndrome. Monitor for signs of anemia, unexpected infection, or bleeding. (5.4)
- Suicidal behavior and ideation: Monitor for suicidal thoughts or behaviors. (5.5)
- Aseptic meningitis: Monitor for signs of meningitis. (5.6)
- Medication errors due to product name confusion: Strongly advise patients to visually inspect tablets to verify the received drug is correct. (3.2, 5.7, 16, 17.10)

ADVERSE REACTIONS

- Most common adverse reactions with use as adjunctive therapy (treatment difference between LAMICTAL XR and placebo $\geq 4\%$) are dizziness, tremor/intention tremor, vomiting, and diplopia. (6.1)
- Most common adverse reactions with use as monotherapy were similar to those seen with previous studies conducted with immediate-release lamotrigine and LAMICTAL XR. (6.1)

To report SUSPECTED ADVERSE REACTIONS, contact GlaxoSmithKline at 1-888-825-5249 or FDA at 1-800-FDA-1088 or www.fda.gov/medwatch.

DRUG INTERACTIONS

- Valproate increases lamotrigine concentrations more than 2-fold. (7, 12.3)
- Carbamazepine, phenytoin, phenobarbital, and primidone decrease lamotrigine concentrations by approximately 40%. (7, 12.3)
- Estrogen-containing oral contraceptives and rifampin also decrease lamotrigine concentrations by approximately 50%. (7, 12.3)

USE IN SPECIFIC POPULATIONS

- Pregnancy: Based on animal data may cause fetal harm. Pregnancy registry available. (8.1)
- Hepatic impairment: Dosage adjustments required in patients with moderate and severe liver impairment. (2.1, 8.6)
- Renal impairment: Reduced maintenance doses may be effective for patients with significant renal impairment. (2.1, 8.7)

See 17 for PATIENT COUNSELING INFORMATION and Medication Guide.

Revised: 04/2011

FULL PRESCRIBING INFORMATION: CONTENTS*

WARNING: SERIOUS SKIN RASHES

1 INDICATIONS AND USAGE

- 1.1 Adjunctive Therapy
- 1.2 Monotherapy
- 1.3 Limitation of Use

2 DOSAGE AND ADMINISTRATION

- 2.1 General Dosing Considerations
- 2.2 Adjunctive Therapy for Primary Generalized Tonic-Clonic and Partial Onset Seizures
- 2.3 Conversion From Adjunctive Therapy to Monotherapy

- 2.4 Conversion From Immediate-Release Lamotrigine Tablets to LAMICTAL XR

3 DOSAGE FORMS AND STRENGTHS

- 3.1 Extended-Release Tablets
- 3.2 Potential Medication Errors

4 CONTRAINDICATIONS

5 WARNINGS AND PRECAUTIONS

- 5.1 Serious Skin Rashes
- 5.2 Hypersensitivity Reactions
- 5.3 Acute Multiorgan Failure
- 5.4 Blood Dyscrasias
- 5.5 Suicidal Behavior and Ideation
- 5.6 Aseptic Meningitis
- 5.7 Potential Medication Errors

- 5.8 Concomitant Use With Oral Contraceptives
- 5.9 Withdrawal Seizures
- 5.10 Status Epilepticus
- 5.11 Sudden Unexplained Death in Epilepsy
- 5.12 Addition of LAMICTAL XR to a Multidrug Regimen That Includes Valproate
- 5.13 Binding in the Eye and Other Melanin-Containing Tissues
- 5.14 Laboratory Tests
- 6 ADVERSE REACTIONS**
 - 6.1 Clinical Trial Experience With LAMICTAL XR for Treatment of Primary Generalized Tonic-Clonic and Partial Onset Seizures
 - 6.2 Other Adverse Reactions Observed During the Clinical Development of Immediate-Release Lamotrigine
 - 6.3 Postmarketing Experience With Immediate-Release Lamotrigine
- 7 DRUG INTERACTIONS**
- 8 USE IN SPECIFIC POPULATIONS**
 - 8.1 Pregnancy
 - 8.2 Labor and Delivery
 - 8.3 Nursing Mothers
 - 8.4 Pediatric Use
 - 8.5 Geriatric Use
 - 8.6 Patients With Hepatic Impairment
 - 8.7 Patients With Renal Impairment
- 10 OVERDOSAGE**
 - 10.1 Human Overdose Experience
 - 10.2 Management of Overdose
- 11 DESCRIPTION**
- 12 CLINICAL PHARMACOLOGY**
 - 12.1 Mechanism of Action
 - 12.2 Pharmacodynamics
 - 12.3 Pharmacokinetics
- 13 NONCLINICAL TOXICOLOGY**

*Sections or subsections omitted from the full prescribing information are not listed.

1 _____
2 **FULL PRESCRIBING INFORMATION**

3 **WARNING: SERIOUS SKIN RASHES**

4 **LAMICTAL® XR™ can cause serious rashes requiring hospitalization and**
5 **discontinuation of treatment. The incidence of these rashes, which have included Stevens-**
6 **Johnson syndrome, is approximately 0.8% (8 per 1,000) in pediatric patients (aged 2 to 16**
7 **years) receiving immediate-release lamotrigine as adjunctive therapy for epilepsy and**
8 **0.3% (3 per 1,000) in adults on adjunctive therapy for epilepsy. In a prospectively followed**
9 **cohort of 1,983 pediatric patients (aged 2 to 16 years) with epilepsy taking adjunctive**
10 **immediate-release lamotrigine, there was 1 rash-related death. LAMICTAL XR is not**
11 **approved for patients less than 13 years of age. In worldwide postmarketing experience,**
12 **rare cases of toxic epidermal necrolysis and/or rash-related death have been reported in**
13 **adult and pediatric patients, but their numbers are too few to permit a precise estimate of**
14 **the rate.**

15 **The risk of serious rash caused by treatment with LAMICTAL XR is not expected**
16 **to differ from that with immediate-release lamotrigine. However, the relatively limited**
17 **treatment experience with LAMICTAL XR makes it difficult to characterize the frequency**
18 **and risk of serious rashes caused by treatment with LAMICTAL XR.**

19 **Other than age, there are as yet no factors identified that are known to predict the**
20 **risk of occurrence or the severity of rash caused by LAMICTAL XR. There are**
21 **suggestions, yet to be proven, that the risk of rash may also be increased by (1)**
22 **coadministration of LAMICTAL XR with valproate (includes valproic acid and divalproex**
23 **sodium), (2) exceeding the recommended initial dose of LAMICTAL XR, or (3) exceeding**
24 **the recommended dose escalation for LAMICTAL XR. However, cases have occurred in**
25 **the absence of these factors.**

26 **Nearly all cases of life-threatening rashes caused by immediate-release lamotrigine**
27 **have occurred within 2 to 8 weeks of treatment initiation. However, isolated cases have**
28 **occurred after prolonged treatment (e.g., 6 months). Accordingly, duration of therapy**
29 **cannot be relied upon as means to predict the potential risk heralded by the first**
30 **appearance of a rash.**

31 **Although benign rashes are also caused by LAMICTAL XR, it is not possible to**
32 **predict reliably which rashes will prove to be serious or life threatening. Accordingly,**
33 **LAMICTAL XR should ordinarily be discontinued at the first sign of rash, unless the rash**
34 **is clearly not drug related. Discontinuation of treatment may not prevent a rash from**
35 **becoming life threatening or permanently disabling or disfiguring [see *Warnings and***
36 ***Precautions (5.1)*].**

37 **1 INDICATIONS AND USAGE**

38 **1.1 Adjunctive Therapy**

39 LAMICTAL XR is indicated as adjunctive therapy for primary generalized tonic-clonic
40 (PGTC) seizures and partial onset seizures with or without secondary generalization in patients
41 ≥ 13 years of age.

42 **1.2 Monotherapy**

43 LAMICTAL XR is indicated for conversion to monotherapy in patients ≥ 13 years of age
44 with partial seizures who are receiving treatment with a single antiepileptic drug (AED).

45 Safety and effectiveness of LAMICTAL XR have not been established (1) as initial
46 monotherapy or (2) for simultaneous conversion to monotherapy from two or more concomitant
47 AEDs.

48 **1.3 Limitation of Use**

49 Safety and effectiveness of LAMICTAL XR for use in patients less than 13 years of age
50 have not been established.

51 **2 DOSAGE AND ADMINISTRATION**

52 LAMICTAL XR Extended-Release Tablets are taken once daily, with or without food.
53 Tablets must be swallowed whole and must not be chewed, crushed, or divided.

54 **2.1 General Dosing Considerations**

55 Rash: There are suggestions, yet to be proven, that the risk of severe, potentially life-
56 threatening rash may be increased by (1) coadministration of LAMICTAL XR with valproate,
57 (2) exceeding the recommended initial dose of LAMICTAL XR, or (3) exceeding the
58 recommended dose escalation for LAMICTAL XR. However, cases have occurred in the
59 absence of these factors [see *Boxed Warning*]. Therefore, it is important that the dosing
60 recommendations be followed closely.

61 The risk of nonserious rash may be increased when the recommended initial dose and/or
62 the rate of dose escalation for LAMICTAL XR is exceeded and in patients with a history of
63 allergy or rash to other AEDs.

64 LAMICTAL XR Patient Titration Kits provide LAMICTAL XR at doses consistent with
65 the recommended titration schedule for the first 5 weeks of treatment, based upon concomitant
66 medications for patients with partial onset seizures, and are intended to help reduce the potential
67 for rash. The use of LAMICTAL XR Patient Titration Kits is recommended for appropriate
68 patients who are starting or restarting LAMICTAL XR [see *How Supplied/Storage and Handling*
69 (16)].

70 It is recommended that LAMICTAL XR not be restarted in patients who discontinued
71 due to rash associated with prior treatment with lamotrigine, unless the potential benefits clearly
72 outweigh the risks. If the decision is made to restart a patient who has discontinued LAMICTAL
73 XR, the need to restart with the initial dosing recommendations should be assessed. The greater
74 the interval of time since the previous dose, the greater consideration should be given to
75 restarting with the initial dosing recommendations. If a patient has discontinued lamotrigine for a

76 period of more than 5 half-lives, it is recommended that initial dosing recommendations and
77 guidelines be followed. The half-life of lamotrigine is affected by other concomitant medications
78 [see *Clinical Pharmacology (12.3)*].

79 **LAMICTAL XR Added to Drugs Known to Induce or Inhibit Glucuronidation:** Drugs
80 other than those listed in the Clinical Pharmacology section [see *Clinical Pharmacology (12.3)*]
81 have not been systematically evaluated in combination with lamotrigine. Because lamotrigine is
82 metabolized predominantly by glucuronic acid conjugation, drugs that are known to induce or
83 inhibit glucuronidation may affect the apparent clearance of lamotrigine and doses of
84 LAMICTAL XR may require adjustment based on clinical response.

85 **Target Plasma Levels:** A therapeutic plasma concentration range has not been
86 established for lamotrigine. Dosing of LAMICTAL XR should be based on therapeutic response
87 [see *Clinical Pharmacology (12.3)*].

88 **Women Taking Estrogen-Containing Oral Contraceptives: Starting LAMICTAL**
89 **XR in Women Taking Estrogen-Containing Oral Contraceptives:** Although estrogen-
90 containing oral contraceptives have been shown to increase the clearance of lamotrigine [see
91 *Clinical Pharmacology (12.3)*], no adjustments to the recommended dose-escalation guidelines
92 for LAMICTAL XR should be necessary solely based on the use of estrogen-containing oral
93 contraceptives. Therefore, dose escalation should follow the recommended guidelines for
94 initiating adjunctive therapy with LAMICTAL XR based on the concomitant AED or other
95 concomitant medications (see Table 1). See below for adjustments to maintenance doses of
96 LAMICTAL XR in women taking estrogen-containing oral contraceptives.

97 ***Adjustments to the Maintenance Dose of LAMICTAL XR in Women Taking***
98 ***Estrogen-Containing Oral Contraceptives:***

99 (1) ***Taking Estrogen-Containing Oral Contraceptives:*** For women not taking
100 carbamazepine, phenytoin, phenobarbital, primidone, or other drugs such as rifampin that induce
101 lamotrigine glucuronidation [see *Drug Interactions (7), Clinical Pharmacology (12.3)*], the
102 maintenance dose of LAMICTAL XR will in most cases need to be increased by as much as 2-
103 fold over the recommended target maintenance dose in order to maintain a consistent lamotrigine
104 plasma level [see *Clinical Pharmacology (12.3)*].

105 (2) ***Starting Estrogen-Containing Oral Contraceptives:*** In women taking a
106 stable dose of LAMICTAL XR and not taking carbamazepine, phenytoin, phenobarbital,
107 primidone, or other drugs such as rifampin that induce lamotrigine glucuronidation [see *Drug*
108 *Interactions (7), Clinical Pharmacology (12.3)*], the maintenance dose will in most cases need to
109 be increased by as much as 2-fold in order to maintain a consistent lamotrigine plasma level. The
110 dose increases should begin at the same time that the oral contraceptive is introduced and
111 continue, based on clinical response, no more rapidly than 50 to 100 mg/day every week. Dose
112 increases should not exceed the recommended rate (see Table 1) unless lamotrigine plasma
113 levels or clinical response support larger increases. Gradual transient increases in lamotrigine
114 plasma levels may occur during the week of inactive hormonal preparation (pill-free week), and
115 these increases will be greater if dose increases are made in the days before or during the week of

Explore Litigation Insights

Docket Alarm provides insights to develop a more informed litigation strategy and the peace of mind of knowing you're on top of things.

Real-Time Litigation Alerts

Keep your litigation team up-to-date with **real-time alerts** and advanced team management tools built for the enterprise, all while greatly reducing PACER spend.

Our comprehensive service means we can handle Federal, State, and Administrative courts across the country.

Advanced Docket Research

With over 230 million records, Docket Alarm's cloud-native docket research platform finds what other services can't. Coverage includes Federal, State, plus PTAB, TTAB, ITC and NLRB decisions, all in one place.

Identify arguments that have been successful in the past with full text, pinpoint searching. Link to case law cited within any court document via Fastcase.

Analytics At Your Fingertips

Learn what happened the last time a particular judge, opposing counsel or company faced cases similar to yours.

Advanced out-of-the-box PTAB and TTAB analytics are always at your fingertips.

API

Docket Alarm offers a powerful API (application programming interface) to developers that want to integrate case filings into their apps.

LAW FIRMS

Build custom dashboards for your attorneys and clients with live data direct from the court.

Automate many repetitive legal tasks like conflict checks, document management, and marketing.

FINANCIAL INSTITUTIONS

Litigation and bankruptcy checks for companies and debtors.

E-DISCOVERY AND LEGAL VENDORS

Sync your system to PACER to automate legal marketing.
