TITLE
 PROCESS OF MANUFACTURING A MICROELECTRONIC DEVICE USING A REMOVABLE SUPPORT SUBSTRATE AND ETCH-STOP

This is to certify that annexed hereto is a true copy from the records of the United States Patent and Trademark Office of the application which is identified above.

By authority of the
 COMMISSIONER OF PATENTS AND TRADEMARKS

METHOD OF FABRICATING A MICROELECTRONIC DEVICE

Inventors:

Joseph J. Bendik

Gerald T. Malloy

Ronald M. Finnila

ABSTRACT OF THE DISCLOSURE

5 A microelectronic device is fabricated by
furnishing a first substrate (40) having a silicon
etchable layer (42), a silicon dioxide etch-stop
layer (44) overlying the silicon layer (42), and a
single-crystal silicon wafer (46) overlying the
etch-stop layer (44), the wafer (46) having a front
10 surface (52) not contacting the etch stop layer
(44). A microelectronic circuit element (50) is
formed in the single-crystal silicon wafer (46). The
method further includes attaching the front surface
(52) of the single-crystal silicon wafer (46) to a
15 second substrate (58), and etching away the silicon
layer (42) of the first substrate (40) down to the
etch-stop layer (44). The second substrate (58) may
also have a microelectronic circuit element (58')
therein that can be electrically interconnected to
the microelectronic circuit element (50).

B1

BACKGROUND OF THE INVENTION

This invention relates to microelectronic devices, and, more particularly, to a microelectronic device that is moved from one support to another support during fabrication.

Microelectronic devices are normally prepared by a series of steps such as patterning, deposition, implantation, growth, and etching that build up an electronic circuit on or near the top surface of a thin substrate wafer. Interconnection pads are placed on the surface of the wafer to provide connections to external leads or to other microelectronic devices. Such a microelectronic device is considered a two-dimensional structure in the plane of the substrate wafer. There are usually multiple layers of deposited conductors and insulators, but each layer is quite thin. Any height of the device in the third dimension perpendicular to the substrate surface is much less than the dimensions in the plane of the substrate wafer, and is often no more than a few thousand Angstroms.

The microelectronic devices or arrays of such devices are usually placed inside a protective housing called a package, with leads or connection pads extending out of the package. When the microelectronic devices are used, a number of the packages with their contained microelectronic devices are normally affixed to a base such as a phenolic plastic board. Wires are run between the various devices to interconnect them. There may be metallic traces imprinted onto the base to provide common power, ground, and bus connections, and the base itself has external connections. Such boards with a

Explore Litigation Insights

Docket Alarm provides insights to develop a more informed litigation strategy and the peace of mind of knowing you're on top of things.

Real-Time Litigation Alerts

Keep your litigation team up-to-date with **real-time alerts** and advanced team management tools built for the enterprise, all while greatly reducing PACER spend.

Our comprehensive service means we can handle Federal, State, and Administrative courts across the country.

Advanced Docket Research

With over 230 million records, Docket Alarm's cloud-native docket research platform finds what other services can't. Coverage includes Federal, State, plus PTAB, TTAB, ITC and NLRB decisions, all in one place.

Identify arguments that have been successful in the past with full text, pinpoint searching. Link to case law cited within any court document via Fastcase.

Analytics At Your Fingertips

Learn what happened the last time a particular judge, opposing counsel or company faced cases similar to yours.

Advanced out-of-the-box PTAB and TTAB analytics are always at your fingertips.

API

Docket Alarm offers a powerful API (application programming interface) to developers that want to integrate case filings into their apps.

LAW FIRMS

Build custom dashboards for your attorneys and clients with live data direct from the court.

Automate many repetitive legal tasks like conflict checks, document management, and marketing.

FINANCIAL INSTITUTIONS

Litigation and bankruptcy checks for companies and debtors.

E-DISCOVERY AND LEGAL VENDORS

Sync your system to PACER to automate legal marketing.
