Modem Mail Account

3/22/90

Hello! I would like to take this opportunity to announce some MAJOR updates to the TELEBIT Configuration Guides and Technical Documentation. I have enclosed a list of UNIX configuration guides and TELEBIT product guides which may be requested via e-mail and are also available for "anonymous" FTP from the U.S. and international sites listed.

The updates bring the configuration guides in line with new TELEBIT products and newer TELEBIT modem firmware releases. In other words, you will not find any reference to "a small hole by the RS-232 connector at the back of the modem which houses the reset button..." and the need for a straightened paper clip. Optimized modem settings for various UNIX systems, as well as a VERY generic UNIX set-up guide for use in the set-up of UNIX systems for dial-in/out (getty/tip/cu), Version2 and HoneyDANBER UUCP, TCP/SLIP, and Point-to-Point Protocol are amongst the guides. Technical documentation on TCP/SLIP has been updated to include new information on the distribution of Van Jacobson's Compress TCP/SLIP (TCP/CSLIP) and informational updates on PPP.

Once again, I would like to invite TELEBIT modem users with configuration specific and general questions on TELEBIT modem set-up in UNIX and non-UNIX environments to write us at:

UUCP: {uunet, ames, sun, pyramid, decwrl}!telebit!modems
INTERNET: mod...@telebit.com

This will allow us to aid you with the on-line configuration documentation we distribute, as well as providing some basic technical assistance via e-mail. Telephone Technical Support is available at:

1-800-TELEBIT OR 1-408-734-5200

These two support channels will provide the most immediate response for your questions and will prevent any unnecessary cluttering of this newsgroup with TELEBIT-specific questions.

Questions regarding the pricing and availability of TELEBIT modem products, as well as distributor/dealer referrals, should be addressed to the 1-800-TELEBIT Sales Support line. We do not carry this type of sales propaganda on-line.

I would also like to ask that TELEBIT modem users copy us on any concerns, suggestions, and/or comments regarding our on-line configuration guides and technical documents. Contributions of UNIX and non-UNIX system-specific configurations to the TELEBIT on-line documentation are ALWAYS welcome! THANK YOU.

AVAILABLE CONFIGURATION DOCUMENTATION FOR TELEBIT MODEMS

By C. E. Castillo, UNIX Communications Specialist, Telebit Corp.

The following UNIX dial-in/out and UUCP configuration guides are available for e-mail, FAX, or USmail delivery from TELEBIT:

These documents are also available from the Internet (USA), EUnet (Europe), JUnet (Japan), and ACSnet (Australia) for "anonymous" FTP at the following systems (ALL FILES ARE COMPRESSED!):

EUNET: mcsun.EU.net [192.16.202.1]
JUNET: ftp.cs.titech.ac.jp [131.112.16.39]
ACSNET: ditmela.cng.dit.CSIRO.AU [128.250.1.81]

UUNET makes these documents available via "uucp" login, as well. The 1-900-GOT-SRCS (1-900-468-7727) service allows "uucp" login and retrieval of publicly available software sources and TELEBIT documentation at a charge of \$.40US per minute to the caller. This service is available in the U.S. only. The UUNET900.setup file contains more detailed information on set-up and use.

Request the file: uunet!~ftp/telebit-info/ls-lR.Z, to ascertain the contents and choices available. The file: uunet!~ftp/ls-lR.Z, will list all other available software on this system. ALL FILES ARE COMPRESSED! The file: uunet!~ftp/compress.tar, should be requested if you do not have the compress utility on your system.

| | |
|----------------|--|
| MASS.setup | Masscomp 5600 and similar systems. |
| SUN3.setup | Sun 3 and 4 [SUNOS 3.X] series Workstations. |
| SUN4.setup | Sun 3 and 4 [SUNOS 4.X] series Workstations. |
| SUN386i.setup | Sun 386i [SUNOS 4.X] Workstations. |
| SUNSPARC.setup | Sun SparcStation I [SUNOS 4.X] Workstations. |
| UNISYS.setup | Unisys S5000 systems (and NCR Towers). |
| UNIXPC.setup | Unix PC systems running ATT V.2 (3b1). |
| UNIX.setup | Unix dial-up, UUCP (BNU/Version2), and SLIP-PPP. |
| VAX.setup | DEC VAX/ULTRIX [2.2] systems with DMZ32. |
| XENIX22X.setup | SCO XENIX [2.2.X] on 286-/386-based PC systems. |
| ppp.doc | Introduction to the Point-to-Point Protocol. |
| slip.doc | Primer for TCP/IP, Dial-up IP, and INTERNET. |
| tech.doc | Technical overview of Telebit Modems. |
| upgrade.doc | Firmware and modem model upgrade information. |
| warranty.doc | TELEBIT extended warranty information. |
| UUNET900.setup | Use of the "900" UUNET archives UUCP number. |
| SETUPS.list | This file. |
| PRODUCTS.list | A list of current on-line product documents. |
| PRODUCTS | A directory of various TELEBIT product specification sheets. |

Due to limited resources, these configuration guides may not always be accurate or up-to-date. TELEBIT requests and appreciates the cooperation of all TELEBIT products end-users and supporters in augmenting and distributing these configurations through the e-mail and network newsgroups. TELEBIT welcomes contributions from our end-users and supporters. Please feel free to mail any configuration suggestions and/or procedures to the account noted below.

If your system type is not listed, please commence by ordering the UNIX.setup configuration guide. This document should contain enough preliminary UNIX dial-in/out and UUCP information to allow for an initial configuration which our Technical Support Department may then assist you with. TELEBIT Technical Support may be reached at 1-800-TELEBIT.

Thank you for your purchase and/or interest in TELEBIT products. We welcome your support and recommendations and look forward to supporting you with quality technical support and products.

Michael Ballard/Cerafin E. Castillo
