Does anyone know how to access Telebit registers S70, S71, S72, S73, S74, S75, S76, S77, S78 - or seen a program to read these during a connection? Most are read only and show Equivalent Line Noise Profile (S76), Line Quality (S78), Instantaneous Receive Rate (S72), Instantaneous Transmit Rate (S70), etc. Is Pro Yam capable of doing this ?
