Finally, as a summary comparison between single-crystal XRD and powder XRD, the following generalisations may be made:

- (i) *Sample preparation*: Preparation of a single crystal of suitable size and quality for single-crystal XRD can be straightforward, challenging or impossible, depending on the material of interest, whereas preparation of a suitable powder sample for powder XRD is usually straightforward.
- (ii) *Data collection*: The time required to record a complete set of single-crystal XRD data is generally longer than the time required to record a good-quality powder XRD pattern for the same material (although the development of area detectors for single-crystal XRD has improved considerably the rapidity of data collection).
- (iii) *Structure determination*: Structure determination from single-crystal XRD data is generally very rapid and routine, whereas structure determination from powder XRD data is substantially more time-consuming and challenging; nevertheless, the methodology for analysis of powder XRD data has advanced significantly in recent years and the prospects for achieving successful structure determination from powder XRD data are continually improving.

### 1.3 QUALITATIVE ASPECTS OF POWDER XRD: 'FINGERPRINTING' OF CRYSTALLINE PHASES

A crucially important, yet very straightforward, application of powder XRD is the identification ('fingerprinting') of crystalline phases, based on the fact that different crystal structures give rise to distinct powder XRD patterns. This type of qualitative characterisation of crystalline materials is exploited in all areas of materials preparation and is also widely utilised in industrial protocols, including quality control, polymorph screening and the characterisation of products from rapid-throughput crystallisation experiments.<sup>[27,28]</sup>

In utilising powder XRD for 'fingerprinting' of crystalline phases, the aim is to compare the experimental powder XRD pattern of a sample prepared by materials synthesis with those of known materials (either experimental powder XRD patterns recorded for materials prepared by other synthetic routes or powder XRD patterns simulated from known crystal structures that have been determined previously). An example of this type of comparison is given in Figure 1.3. In some cases, the

Figure 1.3 Comparison of (a) the experimental powder XRD pattern for a sample of *m*-aminobenzoic acid and (b) the simulated powder XRD patterns for all polymorphs of *m*-aminobenzoic acid with known crystal structures (Forms II, III, IV and V). From this comparison (see the matching of the vertical dashed lines), the sample of *m*-aminobenzoic acid with the powder XRD pattern shown in (a) is readily identified as Form II.

# Explore Litigation Insights

Docket Alarm provides insights to develop a more informed litigation strategy and the peace of mind of knowing you're on top of things.

## Real-Time Litigation Alerts

Keep your litigation team up-to-date with **real-time alerts** and advanced team management tools built for the enterprise, all while greatly reducing PACER spend.

Our comprehensive service means we can handle Federal, State, and Administrative courts across the country.

## Advanced Docket Research

With over 230 million records, Docket Alarm's cloud-native docket research platform finds what other services can't. Coverage includes Federal, State, plus PTAB, TTAB, ITC and NLRB decisions, all in one place.

Identify arguments that have been successful in the past with full text, pinpoint searching. Link to case law cited within any court document via Fastcase.

## Analytics At Your Fingertips

Learn what happened the last time a particular judge, opposing counsel or company faced cases similar to yours.

Advanced out-of-the-box PTAB and TTAB analytics are always at your fingertips.

## API

Docket Alarm offers a powerful API (application programming interface) to developers that want to integrate case filings into their apps.

## LAW FIRMS

Build custom dashboards for your attorneys and clients with live data direct from the court.

Automate many repetitive legal tasks like conflict checks, document management, and marketing.

## FINANCIAL INSTITUTIONS

Litigation and bankruptcy checks for companies and debtors.

## E-DISCOVERY AND LEGAL VENDORS

Sync your system to PACER to automate legal marketing.
