#### **ABSTRACT** [57]

A head lamp device for a vehicle capable of changing a lighting region in front of the vehicle in rightward and leftward directions is provided. The device comprises a head lamp, lighting region changing means for changing the lighting region of the head lamp, strain degree detecting means for detecting degree of strain of the driver, and control means for controlling the lighting region changing means on the basis of information detected by the strain degree detecting means. The control means adjusts the amount and/or the speed of change of the lighting region in accordance with degree of strain of the driver. The change of the lighting region can be carried out naturally without sense of incongruity in view of degree of strain of the driver.
