hyperlink
 A predefined linkage between one object and another. The link is displayed either as text or as an icon. On Web pages, a text hyperlink displays as underlined text, while a graphical hyperlink is a small graphics image of any size and shape. The terms "hyperlink" and "hypertext" are used synonymously. See *hypertext* and *hypergraphic*.

hypermedia
 The use of data, text, graphics, video and voice as elements in a hypertext system. All the various forms of information are linked together so that a user can easily move from one to another.
