Massively replicating services in wide-area internetworks

Obraczka, Katia. University of Southern California, ProQuest Dissertations Publishing, 1994. DP28279.

Abstract

Translate

Abstract not available.

Details

Subject	Electrical engineering
Classification	0544: Electrical engineering
Identifier / keyword	Applied sciences
Title	Massively replicating services in wide-area internetworks
Author	Obraczka, Katia
Number of pages	140
Publication year	1994
Degree date	1994
School code	0208
Source	DAI-B 75/12(E), Jun 2015
Place of publication	Ann Arbor
Country of publication	United States
University/institution	University of Southern California
University location	United States -- California
Degree	Ph.D.
Source type	Dissertations & Theses
Language	English
Document type	Dissertation/Thesis
Dissertation/thesis number	DP28279
ProQuest document ID	1634631868
Document URL	http://search.proquest.com.proxy2.library.illinois.edu/docview/1634631868?accountid=14553
Copyright	Copyright ProQuest, UMI Dissertations Publishing 1994

The Harvest information discovery and access system
[HTML] from tugraz.at

CM Bowman, PB Danzig, DR Hardy, U Manber... - Computer Networks and ..., 1995 - Elsevier
It is increasingly difficult to make effective use of Internet information, given the rapid growth in data volume, user base, and data diversity. In this paper we introduce Harvest, a system that provides a scalable, customizable architecture for gathering, indexing, caching, ...

[BOOK] Locating nearby copies of replicated Internet servers
[PDF] from dtic.mil

JD Guyton, MF Schwartz - 1995 - dl.acm.org
Abstract In this paper we consider the problem of choosing among a collection of replicated servers, focusing on the question of how to make choices that segregate client/server traffic according to network topology. We explore the cost and effectiveness of a variety of ...

Application-layer anycasting
[PDF] from gatech.edu

S Bhattacharjee, MH Ammar, EW Zegura... - ... '97. Sixteenth Annual ..., 1997 - ieeexplore.ieee.org
Abstract The anycasting communication paradigm is designed to support server replication by allowing applications to easily select and communicate with the "best" server, according to some performance or policy criteria, in a group of content-equivalent servers. We ...

Using network layer anycast for load distribution in the Internet

E Basturk, R Engel, R Haas, V Peris, D Saha - Tech. Rep., IBM TJ Watson ..., 1997 - Citeseer
Abstract In the Internet, when a unicast IP address is shared by many hosts, it is known as an anycast address. In contrast to multicast, a packet destined to an anycast address is forwarded to any one member of the anycast group. In this paper, we investigate how the ...

A scalable architecture for maintaining referential integrity in distributed information systems
[PDF] from researchgate.net

F Kappe - J. UCS The Journal of Universal Computer Science, 1996 - Springer
Abstract One of the problems that we experience with today's most widespread Internet Information Systems (like WWW or Gopher) is the lack of support for maintaining referential integrity. Whenever a resource is (re) moved, dangling references from other resources ...

[PDF] Resource and knowledge discovery from the internet and multimedia repositories
[PDF] from ualberta.ca

OR Zaiane - 1999 - webdocs.cs.ualberta.ca
Abstract There is a massive increase of information available on electronic networks. This profusion of resources on the World-Wide Web gave rise to considerable interest in the research community. Traditional information retrieval techniques have been applied to the ...

[PDF] Using IP anycast for load distribution and server location
[PDF] from psu.edu

R Engel, V Peris, D Saha, E Basturk, R Haas - Proc. of IEEE Globecom ..., 1998 - Citeseer
Abstract An anycast address is an IP address that may be bound to one or more network endpoints. Unlike multicast, a packet destined to an anycast address is forwarded to any one of the hosts with this address. In this paper, we investigate how the IP anycast service can ...

[PDF] Autonomous replication in wide-area internetworks
[PDF] from psu.edu

J Gwertzman - 1995 - Citeseer
Abstract The number of users connected to the Internet has been growing at an exponential rate, resulting in similar increases in network tra c and Internet server load. Advances in microprocessors and network technologies have kept up with growth so far, but we are ...

Harvesting mathematics

J Plumer, R Schwänzl - 1996 - Citeseer
Abstract By the end of March 1996, nearly all mathematics departments in the FRG were present on the WWW. Difficulties arise with navigating, due to the relatively high number of servers. We discuss" Harvest" as a useful, useable, and scalable aid to documentation. ...

DOCKET ALARM

Explore Litigation Insights

Docket Alarm provides insights to develop a more informed litigation strategy and the peace of mind of knowing you're on top of things.

Real-Time Litigation Alerts

Keep your litigation team up-to-date with **real-time alerts** and advanced team management tools built for the enterprise, all while greatly reducing PACER spend.

Our comprehensive service means we can handle Federal, State, and Administrative courts across the country.

Advanced Docket Research

With over 230 million records, Docket Alarm's cloud-native docket research platform finds what other services can't. Coverage includes Federal, State, plus PTAB, TTAB, ITC and NLRB decisions, all in one place.

Identify arguments that have been successful in the past with full text, pinpoint searching. Link to case law cited within any court document via Fastcase.

Analytics At Your Fingertips

Learn what happened the last time a particular judge, opposing counsel or company faced cases similar to yours.

Advanced out-of-the-box PTAB and TTAB analytics are always at your fingertips.

API

Docket Alarm offers a powerful API (application programming interface) to developers that want to integrate case filings into their apps.

LAW FIRMS
Build custom dashboards for your attorneys and clients with live data direct from the court.

Automate many repetitive legal tasks like conflict checks, document management, and marketing.

FINANCIAL INSTITUTIONS
Litigation and bankruptcy checks for companies and debtors.

E-DISCOVERY AND LEGAL VENDORS
Sync your system to PACER to automate legal marketing.
