Dynamics of high-bypass-engine thrust reversal using a variable-pitch fan

NTRS Full-Text: [Click to View](#) [PDF Size: 11.4 MB]

Author and Affiliation:

 Stakolich, E. G. (NASA Lewis Research Center, Cleveland, OH, United States)

Abstract: The test program demonstrated that successful and rapid forward-to reverse-thrust transients can be performed without any significant engine operational limitations for fan blade pitch changes through either feather pitch or flat pitch. For through-feather-pitch operation with a flight inlet, fan stall problems were encountered, and a fan blade overshoot technique was used to establish reverse thrust.

Publication Date: May 01, 1977
Document ID: 19770015162 (Acquired Nov 18, 1995)
Accession Number: 77N22106
Subject Category: AIRCRAFT PROPULSION AND POWER
Report/Patent Number: NASA-TM-X-3524, E-9026
Document Type: Technical Report
Publisher Information: Washington, United States
Contract/Grant/Task Num: RTOP 505-05
Financial Sponsor: NASA; United States
Organization Source: NASA Lewis Research Center; Cleveland, OH, United States
Description: 36p; In English
Distribution Limits: Unclassified; Publicly available; Unlimited
Rights: No Copyright
NASA Terms: BYPASSES; HELICOPTER PROPELLER DRIVE; THRUST REVERSAL; VARIABLE PITCH PROPELLERS; DYNAMIC TESTS; PITCH (INCLINATION); PROPULSION SYSTEM CONFIGURATIONS
