## About Spectrum Chemical: The USA's Leading Chemical Manufacturing Company

*We manufacture and distribute fine chemicals and laboratory products - with quality and delivery you can count on every time.*

Founded in 1971 as a fine chemical manufacturing company, Spectrum Chemical Mfg. Corp., a division of Spectrum Laboratory Products, Inc., has grown into the chemical industry's leading customer-focused global supplier of high quality chemicals, lab supplies and equipment. All our U.S. chemical manufacturing facilities are ISO 9001:2008 certified. The California and New Jersey plants are also FDA registered drug establishments and operate under current Good Manufacturing Practices (cGMP).

Spectrum has been an ISO 9000 certified chemical manufacturing company since 1994. The adoption of the ISO International Management Standards provides the foundation for the development of Spectrum's entire line of product offerings. When purchasing from Spectrum, customers can be assured of quality, safety and reliability.

ISO 9001:2008 is a "quality management" system that enhances customer satisfaction by assuring compliance with customer applicable regulatory requirements. Continual improvement is an integral and fundamental part of the ISO 9001:2008 standard. Internationally accredited external auditors continually re-certify our quality system every six months. In addition, Spectrum's internal teams audit the system in the intervals between outside audits to further strengthen our quality management system.

For chemical companies in the US, quality is the single most important factor when purchasing fine chemicals and intermediates. That's why we make quality the number one priority at Spectrum.

Chemicals entering our Integrated Quality system are subject to a stringent program of in-house testing to ensure that they meet our own high quality standards, and the standards our customers require.
