

THE Ocular Surface

A JOURNAL OF REVIEW LINKING LABORATORY SCIENCE, CLINICAL SCIENCE, AND CLINICAL PRACTICE

A peer-reviewed journal, indexed in MEDLINE/PubMed and EMBASE

SPECIAL ISSUE

2007 Report of the International Dry Eye WorkShop (DEWS)

Sponsored by the
Tear Film & Ocular Surface Society

**INTRODUCTION TO THE 2007 REPORT OF THE
INTERNATIONAL DRY EYE WORKSHOP (DEWS)**

THE DEFINITION AND CLASSIFICATION OF DRY EYE DISEASE

THE EPIDEMIOLOGY OF DRY EYE DISEASE

METHODOLOGIES TO DIAGNOSE AND MONITOR DRY EYE DISEASE

DESIGN AND CONDUCT OF CLINICAL TRIALS

MANAGEMENT AND THERAPY OF DRY EYE DISEASE

RESEARCH IN DRY EYE

THE Ocular Surface

A JOURNAL OF REVIEW LINKING LABORATORY SCIENCE, CLINICAL SCIENCE, AND CLINICAL PRACTICE

A peer-reviewed journal

Article submission: Questions regarding manuscript preparation not addressed in the Information for Authors may be addressed to the Managing Editor: Susan Erickson, 130 Winchester St., Brookline, MA 02446. Tel: 617-731-3415; Email: s.erickson7@verizon.net. **Information for Authors** is available at www.theocularsurface.com.

Subscription rates Individual: \$154 per year in the US and Canada; \$199 per year rest of world (includes air mail delivery). Institution: \$249 per year in the US and Canada; \$299 per year rest of world (includes air mail delivery). Internet-only subscription: \$139 (US and rest of world). Print-only subscription: \$139 (US and Canada); \$139 (rest of world). Back issues are \$45 per issue. Subscriptions may be ordered online at www.theocularsurface.com or at *The Ocular Surface*, 75 Maiden Lane, Suite 408, New York, NY 10038, USA. TEL: 212-791-1440 FAX: 212-791-4980. Claims for missing issues must be filed within 120 days of the issue date.

Indexing *The Ocular Surface* is indexed in MEDLINE/PubMed and EMBASE. *The Ocular Surface* is printed on acid-free paper that meets the requirements of ANSI/NISO Z39.48-1992 (Permanence of Paper).

DEWS Report: A Mission Completed

This issue of *The Ocular Surface* is very unusual. As the official report of the Dry Eye Workshop (DEWS), it is an encyclopedic review of dry eye disease and, additionally, a guide to resources archived on the internet. It is the product of a team of international experts who have labored over 3 years to compile an evidence-based review of the present state of knowledge for dry eye disease and the methods used to evaluate, diagnose, and manage the disorder. It summarizes the findings of current research and identifies future needs for a better understanding of the etiology, pathogenesis, and potential therapy of the disease.

The process of deliberation and discussion that underpins this arduous endeavor is described in the “Introduction” and in various chapters of the volume. Suffice it to say that an international community of clinicians and scientists with expertise in all aspects of dry eye disease collaborated to search the literature, collect and validate data, and incorporate it into reports. The process of commentary and adjudication of differing opinions was open, yet subject to several levels of validation. The product is a written document that serves as a guide to a vast amount of information that is archived both in this special issue and on a supporting website (www.tearfilm.org) that is accessible to all.

The chapter on Definition and Classification expands the characterization of dry eye disease and places it within the perspective of ocular surface disease. The chapter on Epidemiology provides commentary on the implications of the disease, as well as comparison of the methods available to evaluate symptoms and factors contributory to the disease. The Diagnostic Methodologies chapter not only provides valuable discussion of the parameters of dry eye disease, but also catalogs and validates a vast collection of clinical and research methods, including questionnaires, to monitor the disease. The Research chapter summarizes past and present findings, and identifies areas whose further study will contribute to the understanding of the etiopathogenesis and consequences of dry eye disease. The chapter on Clinical Trials provides recommendations with regard to both general and specific guidelines for clinical trials in dry eye disease and identifies the idiosyncrasies and confounding outcome variables for such trials. The chapter on Management and Therapy catalogs the options for therapy and recommends a contemporary strategy for management of dry eye disease.

As would be expected for a multifactorial disease that has many nuances in clinical and pathological expression, opinions differ even amongst the experts as to the most appropriate way to characterize and label some aspects of the disease. This proved true for the definition and classification of the disease. Some key concepts in the appreciation of dry eye were identified from the literature. One such concept was the characterization of the *Lacrimal Functional Unit*,¹ which has highlighted the interdependence of components of the lacrimal system in maintaining the integrity of the ocular surface. Some new concepts were constructed in the deliberation process of the Subcommittee work, including a concept suggested by Dr. Christophe Baudoin—a *Vicious Circle* of dry eye disease, by which various risk factors may interact to precipitate and perpetuate the condition.² The concept of the *Ocular Surface System*, developed by the Research Subcommittee, extends the scope of the ocular surface to a collection of contiguous tissues that share embryonal, innervational, histological, and hormonal background.

The time and effort necessary to compile and collate this project and the summary document was extraordinary. The endeavor could never have been completed without the sponsorship and commitment of The Tear Film & Ocular Surface Society and the officers and staff of that organization. The planning and execution of the organizational meetings, the coordination of the conferences for presentation of the collected information, the facilitation of the discussions of the DEWS participants, and the administrative direction of the publication process were achieved through the tireless efforts of Dr. David A., Rose M. and Amy G. Sullivan. The deliberations of the Steering Committee were essential to the completion of the task. Likewise, the leaders of the various Subcommittees were in-

Explore Litigation Insights

Docket Alarm provides insights to develop a more informed litigation strategy and the peace of mind of knowing you're on top of things.

Real-Time Litigation Alerts

Keep your litigation team up-to-date with **real-time alerts** and advanced team management tools built for the enterprise, all while greatly reducing PACER spend.

Our comprehensive service means we can handle Federal, State, and Administrative courts across the country.

Advanced Docket Research

With over 230 million records, Docket Alarm's cloud-native docket research platform finds what other services can't. Coverage includes Federal, State, plus PTAB, TTAB, ITC and NLRB decisions, all in one place.

Identify arguments that have been successful in the past with full text, pinpoint searching. Link to case law cited within any court document via Fastcase.

Analytics At Your Fingertips

Learn what happened the last time a particular judge, opposing counsel or company faced cases similar to yours.

Advanced out-of-the-box PTAB and TTAB analytics are always at your fingertips.

API

Docket Alarm offers a powerful API (application programming interface) to developers that want to integrate case filings into their apps.

LAW FIRMS

Build custom dashboards for your attorneys and clients with live data direct from the court.

Automate many repetitive legal tasks like conflict checks, document management, and marketing.

FINANCIAL INSTITUTIONS

Litigation and bankruptcy checks for companies and debtors.

E-DISCOVERY AND LEGAL VENDORS

Sync your system to PACER to automate legal marketing.
