

IN THE UNITED STATES PATENT AND TRADEMARK OFFICE

In re Patent of: Seung Hee Han, et al.
U.S. Patent No.: 7,746,916 Attorney Docket No.: 00035-0006IP1
Issue Date: June 29, 2010
Appl. Serial No.: 11/563,909
Filing Date: November 28, 2006
Title: Method and Apparatus for Generating and Transmitting
Code Sequence in a Wireless Communication System

DECLARATION OF JONATHAN WELLS, PH.D.

Table of Contents

I.	Introduction.....	9
II.	Qualifications.....	9
III.	Materials Considered.....	12
IV.	Applicable Legal Standards.....	14
	A. My Understanding of Anticipation	14
	B. My Understanding of Obviousness.....	14
	C. My Understanding of Claim Construction.....	19
V.	Level of Ordinary Skill in the Art	19
VI.	Overview of the Technology	20
	A. Random Access Overview	20
	1. Introduction.....	20
	2. When is Random Access Used?	24
	3. Types of Random Access Procedures.....	24
	4. The Random Access Preamble	25
	B. Preamble Code Sequences	27
	1. Hadamard Code Sequences.....	29
	2. CAZAC Sequences	30
	a) Zadoff–Chu Sequences.....	31
	b) GCL Sequences	32
	3. Manipulation of Code Sequences	32
VII.	Brief Overview of the '916 Patent.....	35

VIII. Claim Construction.....	40
A. Acquiring/generating a code sequence having a second length by a cyclic extension of a code sequence having a first length (Claims 1 and 6).....	41
B. “cyclic prefix” (Claims 2 and 7)	42
C. "cyclic postfix" (Claims 2, 3 and 7)	45
D. "reference signal sequence" (Claims 5 and 10).....	47
E. “a code sequence generator” (claim 6).....	47
IX. Application of Zhuang327 to the Challenged Claims of the '916 Patent	49
A. Overview of Zhuang327.....	49
1. Generating Access Sequence 120 based on GCL Sequence 110	51
2. Generating Access Signal 130 based on Access Sequence 120	52
3. Generating Circularly-Shifted Access Signal 140 by circularly shifting Access Signal 130.....	52
4. Generating Access Waveform 150 based on Access Signal 140	52
5. Transmitting Access Waveform 150	53
6. Summary	53
B. A method/apparatus for transmitting a code sequence [from a transmitting party to a receiving party] in a wireless communication system (claims 1 and 6).....	54
C. Acquiring/generating a code sequence having a second length by a cyclic extension of a code sequence having a first length (Claims 1 and 6).....	54

D.	Performing a circular shift to the code sequence having the second length (claims 1 and 6)	63
E.	Transmitting the circular shifted code sequence having the second length to the receiving party (claims 1 and 6).....	63
F.	Wherein the first length is a largest prime number smaller than the second length (claims 1 and 6).....	64
G.	Wherein the cyclic extension of the code sequence having the first length is performed such that a part of the code sequence having the first length, having a length corresponding to a difference between the first length and the second length, is added to either a start or an end of the code sequence having the first length (claims 1 and 6).....	64
H.	Wherein the circular shift is performed to the code sequence having the second length such that either a rear portion of the code sequence having the second length moves to a start of the code sequence having the second length, or a front portion of the code sequence having the second length moves to an end of the code sequence having the second length (claims 1 and 6).....	65
I.	The part of the code sequence having the first length comprises at least a cyclic prefix or a cyclic postfix (claims 2 and 7).....	69
J.	The cyclic extension is performed such that a cyclic postfix of the code sequence having the first length, having the length corresponding to the difference between the first length and the second length, is added to the end of the code sequence having the first length (claims 3 and 8).....	69
K.	The code sequence having the second length is transmitted as a reference signal sequence (claims 5 and 10).....	70
L.	A code sequence generator for generating a code sequence having a second length by cyclic extension of a code sequence having a first length, and performing a circular shift to the code sequence having the second length (claim 6)	71
M.	A transmitting unit for transmitting the circular shifted code sequence having the second length (claim 6)	85

X.	Application of Zhuang327 and Popovic to the Challenged Claims of the '916 Patent	86
A.	Zadoff-Chu (ZC) sequence (claims 4 and 9).....	86
XI.	Application of Zhuang327 and Hou to the Challenged Claims of the '916 Patent	92
A.	A method/apparatus for transmitting a code sequence [from a transmitting party to a receiving party] in a wireless communication system (claims 1 and 6).....	97
B.	Acquiring/generating a code sequence having a second length by a cyclic extension of a code sequence having a first length (claims 1 and 6).....	98
C.	Performing a circular shift to the code sequence having the second length (claims 1 and 6).....	101
D.	Transmitting the circular shifted code sequence having the second length to the receiving party (claims 1 and 6).....	108
E.	Wherein the first length is a largest prime number smaller than the second length (claims 1 and 6).....	109
F.	Wherein the cyclic extension of the code sequence having the first length is performed such that a part of the code sequence having the first length, having a length corresponding to a difference between the first length and the second length, is added to either a start or an end of the code sequence having the first length (claims 1 and 6).....	109
G.	Wherein the circular shift is performed to the code sequence having the second length such that either a rear portion of the code sequence having the second length moves to a start of the code sequence having the second length, or a front portion of the code sequence having the second length moves to an end of the code sequence having the second length (claims 1 and 6).....	110
H.	A code sequence generator for generating a code sequence having a second length by cyclic extension of a code sequence having a first	

Explore Litigation Insights

Docket Alarm provides insights to develop a more informed litigation strategy and the peace of mind of knowing you're on top of things.

Real-Time Litigation Alerts

Keep your litigation team up-to-date with **real-time alerts** and advanced team management tools built for the enterprise, all while greatly reducing PACER spend.

Our comprehensive service means we can handle Federal, State, and Administrative courts across the country.

Advanced Docket Research

With over 230 million records, Docket Alarm's cloud-native docket research platform finds what other services can't. Coverage includes Federal, State, plus PTAB, TTAB, ITC and NLRB decisions, all in one place.

Identify arguments that have been successful in the past with full text, pinpoint searching. Link to case law cited within any court document via Fastcase.

Analytics At Your Fingertips

Learn what happened the last time a particular judge, opposing counsel or company faced cases similar to yours.

Advanced out-of-the-box PTAB and TTAB analytics are always at your fingertips.

API

Docket Alarm offers a powerful API (application programming interface) to developers that want to integrate case filings into their apps.

LAW FIRMS

Build custom dashboards for your attorneys and clients with live data direct from the court.

Automate many repetitive legal tasks like conflict checks, document management, and marketing.

FINANCIAL INSTITUTIONS

Litigation and bankruptcy checks for companies and debtors.

E-DISCOVERY AND LEGAL VENDORS

Sync your system to PACER to automate legal marketing.
