Media Gateway Control Protocol (MGCP) Call Flows  
Christian Huitema, Flemming Andreasen, Mauricio Arango, Prakash K

Status of this document

This document is an Internet-Draft and is in full conformance with all provisions of [Section 10 of RFC2026](#) except for the right to produce derivative works.

This document is an Internet-Draft. Internet-Drafts are working documents of the Internet Engineering Task Force (IETF), its areas, and its working groups. Note that other groups may also distribute working documents as Internet-Drafts.

Internet-Drafts are draft documents valid for a maximum of six months and may be updated, replaced, or obsoleted by other documents at any time. It is inappropriate to use Internet-Drafts as reference material or to cite them other than as "work in progress."

To view the entire list of current Internet-Drafts, please check the "lid-abstracts.txt" listing contained in the Internet-Drafts Shadow Directories on ftp.is.co.za (Africa), ftp.nordu.net (Northern Europe), ftp.nis.garr.it (Southern Europe), munnari.oz.au (Pacific Rim), ftp.ietf.org (US East Coast), or ftp.isi.edu (US West Coast).

Abstract

The Media Gateway Control Protocol (MGCP) organizes the communication between a Media Gateway controller, or call agent, and a Media Gateway, e.g. a Voice over IP gateway or a Network Access Server. MGCP is defined in a companion document [1]. This document provides example of MGCP usage by providing a variety of call flows, in the case of telephony and network access servers.

## 1. Introduction

In order to understand the way the MGCP interface will be used, we have described here several possible call flows between a TGW, which is a trunking gateway that implements MGCP, and an RGW, which is a residential gateway that implements MGCP, as well as several call flows describing how MGCP could be used to control a network access service. For each of these call flows it is assumed that the default event packages are as follows:

TGW Trunk package

RGW Line package

NAS Network Access Server package

The diagrams also show a Common Database (CDB) that can be queried for authorization and routing information, and an Accounting Gateway (ACC) that collects accounting information at the start and the end of calls.

These diagrams are solely meant to exhibit the behavior of the MGCP, and to help understanding this protocol. They are not meant as a tutorial on the implementation of a Call Agent. They may very well include miscellaneous errors and imprecisions.

## 2. Internet Telephony Call Flows.

We present seven Internet Telephony call flows:

- \* A basic call between two "trunking gateways",
- \* A basic call from a "residential gateway" to a "trunking gateway",
- \* A basic call from a "trunking gateway" to a "residential gateway".
- \* A basic call from an R2 trunk in a TGW to an SS7 trunk in a TGW.
- \* A basic call from an ISDN trunk in a business gateway to an SS7 trunk in a TGW.
- \* A basic call with continuity test, from a "trunking gateway" to a "residential gateway".
- \* A "hairpin" connection between two endpoints on a trunking gateway, using regular call set-up procedures.
- \* A "hairpin" connection between two endpoints on a residential gateway, using accelerated procedures.

2.1. Connection from a TGW to another TGW

The figure below gives the flow that results in a connection between two trunking gateways.

sw1	SG1	TGW1	CA	TGW2	SG2
IAM	-> IAM	- -	-> CRCX		
		<- ACK	-> CRCX	-> ACK	
			<- IAM	- -	-> IAM
			<-	- -	<- ACM
<-	- - ...	<- ACM			
			<- MDCX	- -	<- ACM
	<-	ACK	-> ANM		
<-	ANM	- -			
REL	-> REL	- -	-> DLCX		
		<-	-> Perf data		
	<-	- -	RLC		
<-	RLC		DLCX	-> Perf data	
			<-	- -	-> REL
			REL		<- RLC
			<-	- -	

During these exchanges the MGCP is used by the Call Agent to control the two endpoints located on the two TGW.

The exchanges start with the arrival from the first switch (SW1) of an

# Explore Litigation Insights

Docket Alarm provides insights to develop a more informed litigation strategy and the peace of mind of knowing you're on top of things.

## Real-Time Litigation Alerts

Keep your litigation team up-to-date with **real-time alerts** and advanced team management tools built for the enterprise, all while greatly reducing PACER spend.

Our comprehensive service means we can handle Federal, State, and Administrative courts across the country.

## Advanced Docket Research

With over 230 million records, Docket Alarm's cloud-native docket research platform finds what other services can't. Coverage includes Federal, State, plus PTAB, TTAB, ITC and NLRB decisions, all in one place.

Identify arguments that have been successful in the past with full text, pinpoint searching. Link to case law cited within any court document via Fastcase.

## Analytics At Your Fingertips

Learn what happened the last time a particular judge, opposing counsel or company faced cases similar to yours.

Advanced out-of-the-box PTAB and TTAB analytics are always at your fingertips.

## API

Docket Alarm offers a powerful API (application programming interface) to developers that want to integrate case filings into their apps.

## LAW FIRMS

Build custom dashboards for your attorneys and clients with live data direct from the court.

Automate many repetitive legal tasks like conflict checks, document management, and marketing.

## FINANCIAL INSTITUTIONS

Litigation and bankruptcy checks for companies and debtors.

## E-DISCOVERY AND LEGAL VENDORS

Sync your system to PACER to automate legal marketing.
