(57) **ABSTRACT**

(65) **Prior Publication Data**
US 2008/0075262 A1 Mar. 27, 2008

A caller ID based call routing feature is described for blocked and non-blocked caller ID's. A processing system in the public switched telephone network (PSTN) receives first identifying information for identify the source of a telephone call and associates additional information stored in a memory with the first identifying information. The additional information may be information about the calling party initially downloaded to the memory by a subscriber. Once retrieved from the memory by the processing system, the additional information may then be transmitted to the subscriber via the Internet for display on a monitor or to the subscriber's telephone for display on a telephone display. Another feature described is a branch calling feature where the subscriber may program a processing system within the PSTN to forward an incoming call to two or more end units (e.g., telephones) simultaneously. If the call at an end unit is answered, answer supervision signaling is transmitted back to the processing system which then terminates all other calls. The processing system then connects the calling party to the subscriber. The branch calling may be made for any combination of local, long distance, and cellular telephone numbers.

- Obviousness of claims 1, 2, 8, 11, and 15–19 by Shtivelman and O'Neal

'113 Patent: Independent Claim 1

Claim 1

A method performed by a web enabled processing system including one or more web servers coupled to a call processing system serving as an intelligent interconnection between at least a first packet network and a second network **coupled to a switching facility** of a telecommunications network, the telecommunications network comprising edge switches for routing calls from subscribers within a local geographic area and **switching facilities** for routing calls to other switches or other **switching facilities** local or in other geographic areas, the method for enabling voice communication from a calling party to a called party across both the packet network and the second network, the method comprising the steps of:

receiving call data which is associated with a call originated by the calling party via either the packet network or the second network, at the call processing system, the calling party using a communications device to originate the call for the purpose of initiating voice communication; processing the call at the call processing system **coupled to** at least one **switching facility** of the telecommunications network via the second network, the call processing system processing the call across both the packet network and the second network to complete the call to the called party; and

establishing the voice communication between the calling party and the called party and, when the call is completed, across both the packet network and the second network.

IPR2016-01256: Instituted Grounds for '298 P

- Obviousness of claim 1 over O'Neal, McMullin, the Admitted Prior Art
- Obviousness of claim 20 over O'Neal, Chang, Admitted Prior Art

Explore Litigation Insights

Docket Alarm provides insights to develop a more informed litigation strategy and the peace of mind of knowing you're on top of things.

Real-Time Litigation Alerts

Keep your litigation team up-to-date with **real-time alerts** and advanced team management tools built for the enterprise, all while greatly reducing PACER spend.

Our comprehensive service means we can handle Federal, State, and Administrative courts across the country.

Advanced Docket Research

With over 230 million records, Docket Alarm's cloud-native docket research platform finds what other services can't. Coverage includes Federal, State, plus PTAB, TTAB, ITC and NLRB decisions, all in one place.

Identify arguments that have been successful in the past with full text, pinpoint searching. Link to case law cited within any court document via Fastcase.

Analytics At Your Fingertips

Learn what happened the last time a particular judge, opposing counsel or company faced cases similar to yours.

Advanced out-of-the-box PTAB and TTAB analytics are always at your fingertips.

API

Docket Alarm offers a powerful API (application programming interface) to developers that want to integrate case filings into their apps.

LAW FIRMS

Build custom dashboards for your attorneys and clients with live data direct from the court.

Automate many repetitive legal tasks like conflict checks, document management, and marketing.

FINANCIAL INSTITUTIONS

Litigation and bankruptcy checks for companies and debtors.

E-DISCOVERY AND LEGAL VENDORS

Sync your system to PACER to automate legal marketing.
