International Academy of Pathology (IAP)  
and  
with support from the  
Swiss Federal Office of Public Health, Bern

The WHO Classification of Tumours of the Digestive System  
presented in this book reflects the views of a  
Working Group that convened for an  
Editorial and Consensus Conference in  
Lyon, France, November 6-9, 1999.

Members of the Working Group are indicated  
in the List of Contributors on page 253.

III. Series

ISBN 92 832 2410 8 (NLM Classification: W1)

A microscopic image of pancreatic tissue, likely a hematoxylin and eosin (H&E) stained section. The image shows acinar cells arranged in clusters and cords, with prominent nuclei stained blue and cytoplasm stained pink. There are also ductal structures visible, some containing secretory granules. The overall architecture is characteristic of the exocrine pancreas.

## CHAPTER 10

### **Tumours of the Exocrine Pancreas**

Pancreatic carcinoma is a highly malignant neoplasm that still carries a very poor prognosis. Ductal adenocarcinoma is the most frequent type. Although cigarette smoking has been established as a causative factor, the risk attributable to tobacco abuse amounting to approximately 30%. An increased risk is also associated with hereditary pancreatitis, but additional aetiological factors remain to be identified.

Significant progress has been made in the understanding of the molecular basis of ductal carcinomas. *KRAS* point mutations and inactivation of the tumour suppressor genes *p16*, *TP53* and *DPC4* have been identified as most frequent genetic alterations.

Non-ductal pancreatic neoplasms span a wide range of histological features that need to be recognized by pathologists as several entities are associated with distinct opportunities for therapy.

# Explore Litigation Insights

Docket Alarm provides insights to develop a more informed litigation strategy and the peace of mind of knowing you're on top of things.

## Real-Time Litigation Alerts

Keep your litigation team up-to-date with **real-time alerts** and advanced team management tools built for the enterprise, all while greatly reducing PACER spend.

Our comprehensive service means we can handle Federal, State, and Administrative courts across the country.

## Advanced Docket Research

With over 230 million records, Docket Alarm's cloud-native docket research platform finds what other services can't. Coverage includes Federal, State, plus PTAB, TTAB, ITC and NLRB decisions, all in one place.

Identify arguments that have been successful in the past with full text, pinpoint searching. Link to case law cited within any court document via Fastcase.

## Analytics At Your Fingertips

Learn what happened the last time a particular judge, opposing counsel or company faced cases similar to yours.

Advanced out-of-the-box PTAB and TTAB analytics are always at your fingertips.

## API

Docket Alarm offers a powerful API (application programming interface) to developers that want to integrate case filings into their apps.

## LAW FIRMS

Build custom dashboards for your attorneys and clients with live data direct from the court.

Automate many repetitive legal tasks like conflict checks, document management, and marketing.

## FINANCIAL INSTITUTIONS

Litigation and bankruptcy checks for companies and debtors.

## E-DISCOVERY AND LEGAL VENDORS

Sync your system to PACER to automate legal marketing.
