Paper 19

Entered: February 6, 2017

UNITED STATES PATENT AND TRADEMARK OFFICE

BEFORE THE PATENT TRIAL AND APPEAL BOARD

BAKER HUGHES INCORPORATED and BAKER HUGHES OILFIELD OPERATIONS, INC., Petitioner,

V.

PACKERS PLUS ENERGY SERVICES, INC., Patent Owner.

Case IPR2016-01496 Patent 7,134,505 B2

Before SCOTT A. DANIELS, NEIL T. POWELL, and CARL M. DEFRANCO, *Administrative Patent Judges*.

POWELL, Administrative Patent Judge.

DECISION TO INSTITUTE 37 C.F.R. § 42.108

I. INTRODUCTION

This is a preliminary proceeding to decide whether *inter partes* review of U.S. Patent No. 7,134,505 B2 (Ex. 1001, "the '505 patent") should be instituted under 35 U.S.C. § 314(a). Packers Plus Energy Services Inc. ("Packers Plus") is the owner of the '505 patent. Baker Hughes Incorporated and

Baker Hughes Oilfield Operations, Inc. ("Petitioner") filed a Petition (Paper 1, "Pet.") challenging claims 1–7, 11, and 14–27 of the '505 patent. Rapid Completions LLC, the exclusive licensee of the '505 patent, filed a Preliminary Response (Paper 17, "Prelim. Resp."). After considering the Petition and Preliminary Response, we institute *inter partes* review on all of the challenged claims.

II. BACKGROUND

A. The '505 Patent

The '505 patent describes a tubing string for treating a particular segment of a wellbore, while sealing off other segments. Ex. 1001, Abstract. Typically, a tubing string is run into a wellbore as a conduit for oil and gas products to flow to the surface. *Id.* at 1:23–43. But when natural formation pressure is insufficient, a well "stimulation" technique is employed, which involves injecting fracturing fluids into the formation to enlarge existing channels and thereby improve inflow into the wellbore. *Id.* at 1:30–34.

As described in the '505 patent, the tubing string includes a series of ports along its length, with a ball-actuated sliding sleeve mounted over each port, for selectively permitting the release of fluid from certain segments of the tubing string. *Id.* at 2:35–62, 6:41–7:36. Special sealing devices, called "solid body packers," are mounted along the length of the tubing string

downhole and uphole of each port. *Id.* at 2:35–62, 6:8–40. The solid body packers are disposed about the tubing string and seal the annulus between the tubing string and the wellbore wall, thereby dividing the wellbore into a series of isolated segments. *Id.* at 6:22–28. When the sliding sleeve over a particular port is activated to an open position, fluid can pass into one segment of the wellbore but is prevented from passing into adjacent segments by the packers positioned on either side of the port. *Id.* at 6:46–61.

B. Related Matters

The '505 patent is involved in a concurrent district court action, *Rapid Completions LLC v. Baker Hughes Incorporated*, No. 6:15-cv-00724 (E.D. Tex.), which was filed July 31, 2015. Paper 4, 1. Additionally, the '505 patent is challenged in IPR2016-00596, where we instituted trial in August, 2016.

C. The Challenged Claims

Of the challenged claims, claims 1, 19, and 24 are independent. Claim 1 is illustrative, and is reproduced below.

- 1. An apparatus for fluid treatment of a borehole, the apparatus comprising a tubing string having a long axis,
- a first port opened through the wall of the tubing string,
- a second port opened through the wall of the tubing string, the second port offset from the first port along the long axis of the tubing string,
- a first packer operable to seal about the tubing string and mounted on the tubing string to act in a position offset from the first port along the long axis of the tubing string,
- a second packer operable to seal about the tubing string and mounted on the tubing string to act in a position between the first port and the second port along the long axis of the tubing string;

a third packer operable to seal about the tubing string and mounted on the tubing string to act in a position offset from the second port along the long axis of the tubing string and on a side of the second port opposite the second packer,

at least one of the first, second and third packer being a solid body packer each including multiple packing elements and a hydraulically actuated setting mechanism for at least one of the first, second and third packers to act on fluid pressure communicated to the mechanism from within the apparatus;

a first sleeve positioned relative to the first port, the first sleeve being moveable relative to the first port between a closed port position and a position permitting fluid flow through the first port from the tubing string inner bore and a second sleeve being moveable relative to the second port between a closed port position and a position permitting fluid flow through the second port from the tubing string inner bore;

and a sleeve shifting means for moving the second sleeve from the closed port position to the position permitting fluid flow,

the means for moving the second sleeve selected to create a seal in the tubing string against fluid flow past the second sleeve through the tubing string inner bore.

Ex. 1001, 14:12–44 (line breaks added).

D. The Asserted Grounds

Petitioner contends that claims 1–7, 11, and 14–27 of the '505 patent are unpatentable under 35 U.S.C. § 103 based on the following grounds (Pet. 5–6):

Ground	Reference(s)	Challenged Claims
§ 103	Lane-Wells ¹ and Ellsworth ²	1–7 and 14–27
§ 103	Lane-Wells, Ellsworth and	15

¹ Composite Catalog of Oil Field and Pipe Line Equipment 21st 1955–56 Edition, World Oil, The Gulf Publishing Company (Ex. 1002).

² B. Ellsworth et al., *Production Control of Horizontal Wells in a Carbonate Reef Structure*, 1999 Canadian Institute of Mining, Metallurgy, and Petroleum Horizontal Well Conference (1999) (Ex. 1004).

Ground	Reference(s)	Challenged Claims
	Hartley ³	
§ 103	Lane-Wells, Ellsworth, and Echols ⁴	11
§ 103	Lane-Wells, Ellsworth, and "based on the knowledge of a person of ordinary skill in the art." ⁵	7 and 19

As further support, Petitioner proffers the Declaration of Ali Daneshy, Ph.D. (Ex. 1007).

III. ANALYSIS

In this preliminary proceeding, we determine whether Bakes Hughes has demonstrated a reasonable likelihood that "at least 1 of the claims challenged in the petition" is unpatentable. 35 U.S.C. § 314(a). As always, our goal is "the just, speedy, and inexpensive resolution" of the validity of the challenged claims. 37 C.F.R. § 42.1(b).

A. Claim Construction

In the Petition, Petitioner proposes constructions for certain claim terms. Pet. 25–30. Patent Owner, in turn, states that it "disagrees" with Petitioner's proposed constructions and "intends to dispute them," but offers no construction of its own, except to say "there is no need for the Board to address these disputes now." Prelim. Resp. 9–10. For purposes of this decision, we need not construe explicitly any claim language to determine that there is a reasonable likelihood of Petitioner prevailing on its claim challenges. *See* 35 U.S.C. § 314(a); *Vivid Techs., Inc. v. Am. Sci. & Eng'g, Inc.*, 200 F.3d 795, 803 (Fed. Cir. 1999) ("[O]nly those terms need be

⁴ U.S. Patent No. 5,375,662 iss. Dec. 27, 1994 ("Echols") (Ex. 1005).

DOCKET

Explore Litigation Insights

Docket Alarm provides insights to develop a more informed litigation strategy and the peace of mind of knowing you're on top of things.

Real-Time Litigation Alerts

Keep your litigation team up-to-date with **real-time** alerts and advanced team management tools built for the enterprise, all while greatly reducing PACER spend.

Our comprehensive service means we can handle Federal, State, and Administrative courts across the country.

Advanced Docket Research

With over 230 million records, Docket Alarm's cloud-native docket research platform finds what other services can't. Coverage includes Federal, State, plus PTAB, TTAB, ITC and NLRB decisions, all in one place.

Identify arguments that have been successful in the past with full text, pinpoint searching. Link to case law cited within any court document via Fastcase.

Analytics At Your Fingertips

Learn what happened the last time a particular judge, opposing counsel or company faced cases similar to yours.

Advanced out-of-the-box PTAB and TTAB analytics are always at your fingertips.

API

Docket Alarm offers a powerful API (application programming interface) to developers that want to integrate case filings into their apps.

LAW FIRMS

Build custom dashboards for your attorneys and clients with live data direct from the court.

Automate many repetitive legal tasks like conflict checks, document management, and marketing.

FINANCIAL INSTITUTIONS

Litigation and bankruptcy checks for companies and debtors.

E-DISCOVERY AND LEGAL VENDORS

Sync your system to PACER to automate legal marketing.
