

5.1 RockSeal™ II Open Hole Packer Series

5.1.1 Description

The RockSeal II packer is a first for the oil and gas industry. The packer is a double element, solid body packer with *Rock-Solid* sealing and holding power. It combines the sealing strength of a mechanical element along with the setting force of a dual-piston setting cylinder and mechanical body-lock system. The RockSeal II packer has a specially designed multi-piece elastomer with the largest possible cross section to provide excellent expansion ratios to set in oversized holes. The packing element also contains a special backup system that provides a solid pack-off, even with borehole ovality.

The RockSeal II packer provides minimum running diameters for any given size, and is short in length, yet, long enough to provide a formation packer span of nearly 4 feet (1.2 meters) to provide maximum protection from flow, through the formation, and around the packer. The packer body has a reduced mid-section to promote running through any unconformity or undulations created during drilling. The elastomers are protected when running by oversized packing element back-up rings.

Finally, the packer is designed with an anti-preset feature standard on the RockSeal II. This feature allows the tool to be pushed through tight spots in the well without pre-setting or shearing the packer. When it is time to pull, the RockSeal II packer is released with straight pull. Releasing forces can be reduced by pressuring the tubing string during the releasing operation.

5.1.2 Features

- Dual multi-piece packing element
- Maximum expansion ratios
- Anti-pre-set feature designed into each tool
- Minimum running O.D.
- Available in sour service trim versions
- Adjustable setting and releasing forces
