## Claim 1: four aspects regarding the “notification event” limitation

1. A verification and notification method implemented by a computing system, the method comprising:

receiving, from a user, information via a computing interface presented to the user as a result of an attempt by the user to access a service, the received information including a telephone number associated with the user;

verifying the telephone number by:

establishing a short message service (SMS) connection with the user using the received telephone number;

communicating a verification code to the user through the SMS connection;

receiving, via the computing interface, a submitted verification code that is entered by the user; and

verifying the telephone number if the submitted verification code is the same as the communicated verification code;

completing a registration of the user based on the received information and verified telephone number, wherein the completed registration enables the user to access the service;

maintaining a record of one or more notification events associated with actions that require acknowledgement by the user;

upon receiving an indication of an occurrence of an established notification event, transmitting a message addressed to the verified telephone number indicating the occurrence of the notification event; and

receiving, from the user, an acknowledgement of an action associated with the established notification event.
