I. INTRODUCTION

The claims of Immersion’s U.S. Patent No. 8,749,507 (the “’507 patent”) challenged in this Petition are invalid over the prior art. During prosecution of the ’507 patent, Immersion overcame multiple rejections of the claims by adding limitations reciting various criteria used to detect the occurrence of a gesture on a pressure-sensitive device. This gesture detection algorithm, however, was known in the art, and is disclosed by the both the Toda and Morimura references discussed below. Additional limitations of the challenged claims are disclosed by Shahoian, a prior art Immersion patent publication that discusses at length providing haptic feedback in response to a gesture.
