

IN THE UNITED STATES PATENT AND TRADEMARK OFFICE

Applicant : Steven Leslie Pope, et al. Art Unit : 2454
Serial No. : 11/916,973 Examiner : Jeong S. Park
Filed : November 14, 2008 Conf. No. : 1989
Title : RECEPTION ACCORDING TO A DATA TRANSFER PROTOCOL OF
DATA DIRECTED TO ANY OF A PLURALITY OF DESTINATION
ENTITIES

Mail Stop Amendment

Commissioner for Patents
P.O. Box 1450
Alexandria, VA 22313-1450

AMENDMENT IN REPLY TO ACTION OF SEPTEMBER 13, 2012

Please amend the above-identified application as follows:

Applicant : Steven Leslie Pope, et al.
Serial No. : 11/916,973
Filed : November 14, 2008
Page : 2 of 38

Attorney's Docket No.: 23465-
0003US1 / 307810.US/PRS/PSR

Amendments to the Specification:

Please replace the title with the following new title:

--RECEPTION ACCORDING TO A DATA TRANSFER PROTOCOL OF
DATA DIRECTED TO ANY OF A PLURALITY OF DESTINATION ENTITIES FOR
DATA EXTRACTION--

Amendments to the Claims:

This listing of claims replaces all prior versions and listings of claims in the application:

Listing of Claims:

1. (Withdrawn) A data processing system arranged for receiving over a network, according to a data transfer protocol, data directed to any of a plurality of destination identities, the data processing system comprising:

data storage for storing data received over the network;

a first processing arrangement for performing processing in accordance with the data transfer protocol on received data in the data storage, for making the received data available to respective destination identities; and

a response former arranged for: receiving a message requesting a response indicating the availability of received data to each of a group of destination identities; and forming such a response;

wherein the message former is arranged to, in dependence on receiving the said message:

identify received data that is directed to any destination identity that is both a member of the group and a member of a subset of the plurality of destination identities, and on which processing has not yet been performed;

trigger processing by the first processing arrangement in accordance with the protocol on only the identified data; and subsequently

form a response based at least partly on the result of the triggered processing, wherein the response is formed so as to comprise a positive indication of availability of data for a destination identity of the group if the triggered processing caused data to be made available to the respective destination identity.

2. (Withdrawn) A data processing system according to claim 1 wherein the first processing arrangement is at user level.
3. (Withdrawn) A data processing system according to claim 1 or claim 2 further comprising a second data processing arrangement for performing processing in accordance with the data transfer protocol on received data in the data storage other than the said identified data.
4. (Withdrawn) A data processing system according to claim 3 wherein the second processing arrangement is a part of an operating system of the data processing system.
5. (Withdrawn) A data processing system according to claim 3 or claim 4 further comprising a data structure, associated with the processing of the received data other than the identified data, for storing an indication of: destination identities other than the subset of destination identities; and corresponding state data.
6. (Withdrawn) A data processing system according to claim 5 wherein the state data comprises indications of availability of received data to respective destination identities.
7. (Withdrawn) A data processing system according to claim 6 wherein the indications of availability in the state data are formed based on the result of processing according to the protocol of received data other than data directed to any of the subset of destination identities.
8. (Withdrawn) A data processing system according to any of claims 3 to 7 wherein the second processing arrangement is dedicated to the processing of the received data other than data directed to any of the subset of destination identities.

9. (Withdrawn) A data processing system according to claim 8 wherein the first and second processing arrangements are implemented by means of respective threads

10. (Withdrawn) A data processing system according to claim 8 or claim 9 wherein the dedicated processing is performed as a background processing operation such that other processing operations within the data processing system are not interrupted by the second processing arrangement.

11. (Withdrawn) A data processing system according to any preceding claim wherein the said subset contains destination identities which relate to active network connections.

12. (Withdrawn) A data processing system according to claim 5 or any of claims 6 to 11 as dependent on claim 5 wherein the said response is based additionally on the state data in the data structure.

13. (Withdrawn) A data processing system according to claim 12 wherein the said response is formed so as to comprise a positive indication of availability of data for a destination identity of the group other than a member of the subset if the state data indicates availability of received data to the destination identity.

14. (Withdrawn) A data processing system according to any preceding claim wherein the response is formed so as to comprise a positive indication of availability of data for a destination identity of the group if any processing other than the triggered processing causes data to be made available to the destination identity.

15. (Withdrawn) A data processing system according to claim 5 or any of claims 6 to 14 as dependent on claim 5 wherein the data structure is stored in a cache.

Explore Litigation Insights

Docket Alarm provides insights to develop a more informed litigation strategy and the peace of mind of knowing you're on top of things.

Real-Time Litigation Alerts

Keep your litigation team up-to-date with **real-time alerts** and advanced team management tools built for the enterprise, all while greatly reducing PACER spend.

Our comprehensive service means we can handle Federal, State, and Administrative courts across the country.

Advanced Docket Research

With over 230 million records, Docket Alarm's cloud-native docket research platform finds what other services can't. Coverage includes Federal, State, plus PTAB, TTAB, ITC and NLRB decisions, all in one place.

Identify arguments that have been successful in the past with full text, pinpoint searching. Link to case law cited within any court document via Fastcase.

Analytics At Your Fingertips

Learn what happened the last time a particular judge, opposing counsel or company faced cases similar to yours.

Advanced out-of-the-box PTAB and TTAB analytics are always at your fingertips.

API

Docket Alarm offers a powerful API (application programming interface) to developers that want to integrate case filings into their apps.

LAW FIRMS

Build custom dashboards for your attorneys and clients with live data direct from the court.

Automate many repetitive legal tasks like conflict checks, document management, and marketing.

FINANCIAL INSTITUTIONS

Litigation and bankruptcy checks for companies and debtors.

E-DISCOVERY AND LEGAL VENDORS

Sync your system to PACER to automate legal marketing.
