C.	Independent claims 60 and 61 are not obvious .....	30
VI.	SECONDARY CONSIDERATIONS .....	30
VII.	CONCLUSION .....	31

## I. STATEMENT OF PRECISE RELIEF REQUESTED

Petitioner SecureNet Technologies, LLC (“Petitioner”) filed a petition (“Pet.,” PN 1) for *inter partes* review (“IPR”) of claims 1-9, 12-16, 19, 23-28, 32, 34, 42-47, 54-57, and 59-62 of U.S. Patent No. 8,473,619 (“’619 patent,” Ex. 1001). Patent Owner Icontrol Networks, Inc. (“Icontrol”) requests that the Board deny institution because Petitioner has not met its burden of showing it has a reasonable likelihood of prevailing on at least one claim with respect to any of its proposed grounds of patentability.

## II. INTRODUCTION

Petitioner’s reliance on U.S. Patent Pub. No. 2004/0260427 (“Wimsatt,” Ex. 1004) suffers from a fundamental problem: Wimsatt is a locally distributed system with many control panels and many devices and subsystems that are arranged in a manner completely different from that of the ’619 patent, which claims an integrated system with a gateway that communicates with security components, network devices and a server. *Compare* Ex. 1004 Fig. 1 *with* Ex. 1001 cl. 1. This basic disconnect between Wimsatt and the ’619 patent claims results in a ripple effect of problems with the petition throughout, causing Petitioner to mismatch Wimsatt’s inadequate disclosures with the ’619 patent’s claim elements. Further compounding these problems is Petitioner’s reliance on U.S. Patent No. 6,580,950 (“Johnson,” Ex. 1005), a reference that teaches a system that is incompatible with

and taught away by Wimsatt, and on U.S. Patent No. 4,951,029 (“Severson,” Ex. 1006), which is a primitive security system that lacks any of the claimed features of the ’619 patent. Indeed, any one of the following problems prevents the Board from instituting IPR as to the challenged claims of the ’619 patent:

*First*, the combination of Wimsatt, Severson, and Johnson does not teach automatically discovering components of a security system. *See infra* Section V.A.1. Petitioner conflates the difference between discovering a system versus discovering that system’s components, and improperly relies on prior art disclosure of interrogation (not discovery) that occurs after components have been manually coupled and programmed. *See id.*

*Second*, the proposed combination of Wimsatt, Severson, and Johnson does not maintain objects at a security server. *See infra* Section V.A.2. Petitioner’s reliance on Johnson’s “icons” for this point is unexplained and unsupported by the reference, which does not disclose the purpose of the icons let alone disclose any corresponding aspect of the data structure in Johnson’s server that would be relevant to the ’619 patent claims. *See id.*

*Third*, the petition fails to demonstrate that the proposed combination of Wimsatt, Severson, and Johnson generates processed data in the manner claimed by the ’619 patent. *See infra* Section V.A.3. Merely stating that a “processor” is disclosed does not satisfy Petitioner’s burden to explain whether and how the

processed data recited in claim 1 is generated and subsequently used as claimed.

*See id.*

*Fourth*, the petition fails to demonstrate that it would have been obvious to modify Wimsatt to include the remote server discussed in Johnson. Wimsatt teaches away from the use of servers, and Johnson is incompatible with Wimsatt.

*See infra* Section V.A.4.

Given the numerous above deficiencies with the Petition, none of the Grounds should be instituted.

### **III. THE '619 PATENT**

The '619 patent, entitled “Security Network Integrated with Premise Security System,” describes “an integrated security system . . . that integrates broadband and mobile access and control with conventional security systems and premise devices.” *See* Ex. 1001 Title, Abstract. “The integrated security system provides a complete system that integrates or layers on top of a conventional host security system” and is not limited to integration with any particular security system. *See id.* 5:19-21, 15:65-16:3. As demonstrated by one embodiment displayed in Fig. 1, the integrated security system 100 includes a single gateway 102 that is coupled to conventional home security system 110. *See id.* 6:54-57.

# Explore Litigation Insights

Docket Alarm provides insights to develop a more informed litigation strategy and the peace of mind of knowing you're on top of things.

## Real-Time Litigation Alerts

Keep your litigation team up-to-date with **real-time alerts** and advanced team management tools built for the enterprise, all while greatly reducing PACER spend.

Our comprehensive service means we can handle Federal, State, and Administrative courts across the country.

## Advanced Docket Research

With over 230 million records, Docket Alarm's cloud-native docket research platform finds what other services can't. Coverage includes Federal, State, plus PTAB, TTAB, ITC and NLRB decisions, all in one place.

Identify arguments that have been successful in the past with full text, pinpoint searching. Link to case law cited within any court document via Fastcase.

## Analytics At Your Fingertips

Learn what happened the last time a particular judge, opposing counsel or company faced cases similar to yours.

Advanced out-of-the-box PTAB and TTAB analytics are always at your fingertips.

## API

Docket Alarm offers a powerful API (application programming interface) to developers that want to integrate case filings into their apps.

## LAW FIRMS

Build custom dashboards for your attorneys and clients with live data direct from the court.

Automate many repetitive legal tasks like conflict checks, document management, and marketing.

## FINANCIAL INSTITUTIONS

Litigation and bankruptcy checks for companies and debtors.

## E-DISCOVERY AND LEGAL VENDORS

Sync your system to PACER to automate legal marketing.
