Advanced Heart Valve Replacement Technology

**SAFER
WITH
LESS
WARFARIN**

-  The only mechanical heart valve FDA approved with less warfarin
-  65% lower risk of bleeding
-  Much lower risk of reoperation than tissue valves

On-X Life Technologies is a leading manufacturer of artificial heart valve replacement and repair products. On-X aortic and mitral prosthetic valves are FDA approved and have been safely implanted in approximately 200,000 patients worldwide.

The On-X aortic heart valve is the only mechanical valve FDA approved and clinically proven to be safer with less anticoagulation. In a prospective randomized clinical trial, On-X aortic heart valve patients with a reduced warfarin dose (INR 1.5–2.0) had 65% fewer harmful bleeding events without an increase in stroke risk.

On-X mechanical heart valves are made with the most advanced material in the industry – pure pyrolytic carbon. The advanced design and materials make it the best lifelong heart valve
