PREFACE	xxii
PART Representations and Methods	1
CHAPTER 1 The Intelligent Computer	5
The Field and the Book This Book Has Three Parts 6 ■ The Long-Term Applications Stagger the Imagination 6 ■ The Near-Term Applications Involve New Opportunities 7 ■ Artificial Intelligence Sheds New Light on Traditional Questions 7 ■ Artificial Intelligence Helps Us to Become More Intelligent 8	5
What Artificial Intelligence Can Do Intelligent Systems Can Help Experts to Solve Difficult Analysis Problems 8 ■ Intelligent Systems Can Help Experts to Design New Devices 9 ■ Intelligent Systems Can Learn from Examples 10 ■ Intelligent Systems Can	8
	iii

Provide Answers to English Questions Using both Structured Data and Free Text 11 ■ Artificial Intelligence Is Becoming Less Conspicuous, yet More Essential 12	
Criteria for Success	13
Summary	13
Background	14
CHAPTER 2 Semantic Nets and Description Matching	15
Semantic Nets	16
Good Representations Are the Key to Good Problem Solving 16 Good Representations Support Explicit, Constraint-Exposing Description 18 A Representation Has Four Fundamental Parts 18 Semantic Nets Convey Meaning 19 There Are Many Schools of Thought About the Meaning of Semantics 20 Theoretical Equivalence Is Different from Practical Equivalence 22	
The Describe-and-Match Method	22
Feature-Based Object Identification Illustrates Describe and Match 24	
The Describe-and-Match Method and Analogy Problems	25
Geometric Analogy Rules Describe Object Relations and Object Transformations 25 ■ Scoring Mechanisms Rank Answers 30 ■ Ambiguity Complicates Matching 32 ■ Good Representation Supports Good Performance 32	
The Describe-and-Match Method and Recognition	33
of Abstractions Story Plots Can Be Viewed as Combinations of Mental States and Events 33 ■ Abstraction-Unit Nets Enable Summary 36 ■ Abstraction Units Enable Question Answering 41 ■ Abstraction Units Make Patterns Explicit 42	33
Problem Solving and Understanding Knowledge	42
Summary	44
Background	45
CHAPTER 3 Generate and Test, Means-Ends Analysis, and Problem Reduction	47
The Generate-and-Test Method	47
Generate-and-Test Systems Often Do Identification 48 ■ Good Genera-	

tors Are Complete, Nonredundant, and Informed 49

The Means-Ends Analysis Method	50
The Key Idea in Means-Ends Analysis Is to Reduce Differences 50 ■ Dendral Analyzes Mass Spectrograms 51 ■ Difference-Procedure Tables Often Determine the Means 53	
The Problem-Reduction Method	53
Moving Blocks Illustrates Problem Reduction 54 ■ The Key Idea in Problem Reduction Is to Explore a Goal Tree 56 ■ Goal Trees Can Make Procedure Interaction Transparent 57 ■ Goal Trees Enable Introspective Question Answering 59 ■ Problem Reduction Is Ubiquitous in Programming 60 ■ Problem-Solving Methods Often Work Together 60 ■ Mathematics Toolkits Use Problem Reduction to Solve Calculus Problems 61	
Summary	60
Background	60
_	
CHAPTER 4	63
Nets and Basic Search	63
Blind Methods	63
Net Search Is Really Tree Search 64 ■ Search Trees Explode Exponentially 66 ■ Depth-First Search Dives into the Search Tree 66 ■ Breadth-First Search Pushes Uniformly into the Search Tree 68 ■ The Right Search Depends on the Tree 68 ■ Nondeterministic Search Moves Randomly into the Search Tree 69	
Heuristically Informed Methods	69
Quality Measurements Turn Depth-First Search into Hill Climbing 70 ■ Foothills, Plateaus, and Ridges Make Hills Hard to Climb 72 ■ Beam Search Expands Several Partial Paths and Purges the Rest 73 ■ Best-First Search Expands the Best Partial Path 75 ■ Search May Lead to Discovery 75 ■ Search Alternatives Form a Procedure Family 78	
Summary	78
Background	79
CHAPTER 5 Nets and Optimal Search	81
The Best Path	81
The British Museum Procedure Looks Everywhere 81 ■ Branch-and-Bound Search Expands the Least-Cost Partial Path 82 ■ Adding Underestimates Improves Efficiency 84	

DOCKET

Explore Litigation Insights

Docket Alarm provides insights to develop a more informed litigation strategy and the peace of mind of knowing you're on top of things.

Real-Time Litigation Alerts

Keep your litigation team up-to-date with **real-time** alerts and advanced team management tools built for the enterprise, all while greatly reducing PACER spend.

Our comprehensive service means we can handle Federal, State, and Administrative courts across the country.

Advanced Docket Research

With over 230 million records, Docket Alarm's cloud-native docket research platform finds what other services can't. Coverage includes Federal, State, plus PTAB, TTAB, ITC and NLRB decisions, all in one place.

Identify arguments that have been successful in the past with full text, pinpoint searching. Link to case law cited within any court document via Fastcase.

Analytics At Your Fingertips

Learn what happened the last time a particular judge, opposing counsel or company faced cases similar to yours.

Advanced out-of-the-box PTAB and TTAB analytics are always at your fingertips.

API

Docket Alarm offers a powerful API (application programming interface) to developers that want to integrate case filings into their apps.

LAW FIRMS

Build custom dashboards for your attorneys and clients with live data direct from the court.

Automate many repetitive legal tasks like conflict checks, document management, and marketing.

FINANCIAL INSTITUTIONS

Litigation and bankruptcy checks for companies and debtors.

E-DISCOVERY AND LEGAL VENDORS

Sync your system to PACER to automate legal marketing.
