**Abstract**

This IBM Redbooks publication describes some of the new functions in NetFinity V5.0. It focuses on database-related functions on NT and OS/2. In addition to DB2 and SQL the book also shows how to set up and use Lotus Notes databases with NetFinity.

This book was written for systems managers who work on the NT and OS/2 platforms who want to know more about systems management in a workgroup environment. Some knowledge of previous versions of NetFinity is assumed as well as knowledge about databases.

**Abstract**

This IBM Redbooks publication describes the new Domain Name System (DNS) server and Dynamic Host Configuration Protocol (DHCP) server support that are included in OS/400 V4R2. The information in this book helps you install, tailor, configure, and troubleshoot the new DNS and DHCP support on the AS/400 system through examples that evolve from simple to more complex scenarios. It also contains examples that show the integration of the new DNS server support with mail and Internet firewall implementation on the AS/400 system. Scenarios are included to show the use of DHCP to automate the configuration of clients in a TCP/IP network including LAN and twinax-attached IBM Network Stations. This book is designed to show the use of the AS/400 system implementation of DNS and DHCP through examples. It also references other publications that contain detailed information on DNS, DHCP, and IP addressing. The intended audience for this book includes the system or network administrator who plans, configures, and maintains TCP/IP AS/400 networks.

## Abstract

The IBM Professional Certification Program offers the certification to become an IBM Certified Solutions Expert — Business Intelligence. If you are knowledgeable about IBM's Business Intelligence solutions and the fundamental concepts of DB2 Universal Database, and you are capable of performing the intermediate and advanced skills required to design, develop, and support Business Intelligence applications, you may benefit from this certification role.

This role is applicable to experts who qualify Business Intelligence opportunities, identify the business and technical requirements, and consult, architect and manage Business Intelligence solutions. This is a software-based test that is non-platform, non-product specific, for use by consultants and implementors.

The core requirement for this certification consists of two tests: Test 503, DB2 UDB V5 Fundamentals or Test 509, DB2 UDB V6.1 Fundamentals, and Test 515, Business Intelligence Solutions. For the objectives of this test, see the URL: <http://www.ibm.com/education/certify/tests/obj515.phtml>. The ordering of core tests is recommended but not required.

To help you become well prepared to perform this certification, this IBM Redbooks publication provides all the information required to pass the Business Intelligence Solutions test.

## Table of contents

- Chapter 1. Business Intelligence - an introduction
- Chapter 2. BI implementations and warehouse concepts
- Chapter 3. A Business Intelligence project
- Chapter 4. BI data sourcing/movement
- Chapter 5. BI solution architecture

# Explore Litigation Insights

Docket Alarm provides insights to develop a more informed litigation strategy and the peace of mind of knowing you're on top of things.

## Real-Time Litigation Alerts

Keep your litigation team up-to-date with **real-time alerts** and advanced team management tools built for the enterprise, all while greatly reducing PACER spend.

Our comprehensive service means we can handle Federal, State, and Administrative courts across the country.

## Advanced Docket Research

With over 230 million records, Docket Alarm's cloud-native docket research platform finds what other services can't. Coverage includes Federal, State, plus PTAB, TTAB, ITC and NLRB decisions, all in one place.

Identify arguments that have been successful in the past with full text, pinpoint searching. Link to case law cited within any court document via Fastcase.

## Analytics At Your Fingertips

Learn what happened the last time a particular judge, opposing counsel or company faced cases similar to yours.

Advanced out-of-the-box PTAB and TTAB analytics are always at your fingertips.

## API

Docket Alarm offers a powerful API (application programming interface) to developers that want to integrate case filings into their apps.

## LAW FIRMS

Build custom dashboards for your attorneys and clients with live data direct from the court.

Automate many repetitive legal tasks like conflict checks, document management, and marketing.

## FINANCIAL INSTITUTIONS

Litigation and bankruptcy checks for companies and debtors.

## E-DISCOVERY AND LEGAL VENDORS

Sync your system to PACER to automate legal marketing.
