[57] **ABSTRACT**

[73] Assignee: **AegiSoft Corporation**, Rockville, Md.

The present invention provides a method and system that enables software-on-demand and software subscription services based on a dynamic transformation filter technology. The invention is also useful in the distribution of other electronic material. The apparatus utilized in this invention does not create any intermediate storage of decrypted material that is under the protection of this technology. Instead, the apparatus is implemented as a virtually integral part of the operating system that monitors and “filters” all read, write, and open/execute access to and from the I/O devices, such as a hard drive. As the protected material is being accessed for read, write or open/execute, the transformation filter positions itself in the critical path which is required for loading the material through the low level file system layer to the high level application layer. The material enters the transformation filter in its encrypted state. The transformation filter decrypts the material in real-time as it goes through, and hands over the material in its original state to the upper level operating system component to fulfill the access requests. Because the need for intermediate storage is eliminated, the decrypted material in its original state is only visible to integral parts of the operating system components and not to other system users. As a result, security is significantly improved over prior art systems.

# Explore Litigation Insights

Docket Alarm provides insights to develop a more informed litigation strategy and the peace of mind of knowing you're on top of things.

## Real-Time Litigation Alerts

Keep your litigation team up-to-date with **real-time alerts** and advanced team management tools built for the enterprise, all while greatly reducing PACER spend.

Our comprehensive service means we can handle Federal, State, and Administrative courts across the country.

## Advanced Docket Research

With over 230 million records, Docket Alarm's cloud-native docket research platform finds what other services can't. Coverage includes Federal, State, plus PTAB, TTAB, ITC and NLRB decisions, all in one place.

Identify arguments that have been successful in the past with full text, pinpoint searching. Link to case law cited within any court document via Fastcase.

## Analytics At Your Fingertips

Learn what happened the last time a particular judge, opposing counsel or company faced cases similar to yours.

Advanced out-of-the-box PTAB and TTAB analytics are always at your fingertips.

## API

Docket Alarm offers a powerful API (application programming interface) to developers that want to integrate case filings into their apps.

## LAW FIRMS

Build custom dashboards for your attorneys and clients with live data direct from the court.

Automate many repetitive legal tasks like conflict checks, document management, and marketing.

## FINANCIAL INSTITUTIONS

Litigation and bankruptcy checks for companies and debtors.

## E-DISCOVERY AND LEGAL VENDORS

Sync your system to PACER to automate legal marketing.
