**PATENT OWNER'S RESPONSE  
PURSUANT TO 37 C.F.R. § 42.120**

## TABLE OF CONTENTS

I.	STATEMENT OF PRECISE RELIEF REQUESTED .....	1
II.	INTRODUCTION AND OVERVIEW OF ARGUMENT .....	1
III.	OVERVIEW OF THE ART .....	5
	A. Divsalar .....	8
	B. Luby .....	9
	C. Frey .....	10
IV.	DR. DAVIS’S TESTIMONY SHOULD BE GIVEN LITTLE WEIGHT .....	11
	A. Dr. Davis’s testimony includes basic errors demonstrating a lack of credibility .....	12
	B. Dr. Davis’s testimony is not independent.....	14
	C. Dr. Davis’s evasiveness during his deposition undermines his credibility.....	15
V.	GROUND 1: DIVSALAR IN VIEW OF LUBY DOES NOT RENDER CLAIMS 1-8 AND 11-14 OBVIOUS .....	17
	A. Legal Principles .....	18
	B. Divsalar in view of Luby does not disclose or lead to irregular repetition of information bits.....	19
	1. The cited references do not disclose irregular repetition of information bits.....	19
	2. The petition relies on improper hindsight to combine Luby and Divsalar .....	26
	C. The cited references do not disclose the “partitioning” step as required by claim 1 .....	29
	D. The petition fails to establish a motivation to combine Divsalar and Luby as proposed .....	30
	1. The Board should not reconsider arguments it has already rejected .....	30
	2. Luby does not teach that irregular repetition of information bits results in any improvement.....	30

3.	Luby does not provide a POSA any motivation to modify Divsalar’s repeater .....	33
4.	Luby does not describe irregularity in the context of turbo codes .....	35
5.	The petition’s citation to Frey undermines its motivation to combine argument.....	35
6.	The petition’s proposed modification was not a “simple” or “routine” change .....	37
E.	The petition’s proposed modifications to Divsalar and Khandekar’s thesis are not supported by any teaching in Luby .....	39
F.	The petition does not and cannot show that either its proposed modification or the Divsalar-Luby combination in general would have a reasonable expectation of success .....	44
VI.	GROUND 2: THE COMBINATION OF DIVSALAR, LUBY, AND LUBY97 DOES NOT RENDER CLAIMS 15–17, 19–22, AND 24–33 OBVIOUS .....	48
A.	There is no motivation to combine Divsalar, Luby and Luby97 .....	48
B.	The petition fails to explain how the combination discloses the challenged claims.....	49
VII.	OBJECTIVE INDICIA OF NON-OBVIOUSNESS.....	50
A.	Nexus between the Objective Evidence and the Claims .....	51
B.	Long-felt need and failure of others .....	54
C.	Industry Praise .....	56
D.	Unexpected Results.....	58
E.	Commercial Success .....	60
VIII.	CONCLUSION .....	62
IX.	APPENDIX .....	64

## **I. STATEMENT OF PRECISE RELIEF REQUESTED**

Apple, Inc. (“Petitioner”) filed a petition for *inter partes* review of claims 1-8, 10-17, and 19-33 of U.S. Patent No. 7,116,710 (the “’710 patent”, EX1201). The Board issued its decision instituting trial (“Decision,” Paper 17) on two of the four petitioned grounds and with respect to all but two of the challenged claims, claims 10 and 23. The patent owner (“PO” or “Caltech”) hereby requests that the Board now issue a final written decision rejecting all grounds of challenge still remaining, and confirming that claims 1-8, 11-17, 19-22, and 24-33 are not unpatentable.

## **II. INTRODUCTION AND OVERVIEW OF ARGUMENT**

The ’710 patent is one of four Caltech patents that resulted from research performed by the inventors, Drs. Jin, Khandekar, and McEliece, in 1999-2000. The patents claim inventions directed to a revolutionary class of error-correction codes, dubbed “irregular repeat and accumulate codes,” or “IRA codes,” which rivaled and surpassed the performance of the best known codes at that time. No other code known at the time could boast linear encoding, linear decoding, and performance near the theoretical Shannon limit.

The IRA codes described in the ’710 patent were the culmination of more than a year of research and analysis by the inventors into different code structures. As even Petitioner’s expert acknowledges, the field of error correction coding is a

complex and highly unpredictable one. Design of new error correction codes typically requires extensive experimentation by experts in the field in order to identify a viable code structure, create useable encoders and decoders, and demonstrate the capabilities of the code's performance. New code structures require rigorous simulation and analysis to determine whether they can be reliably encoded and decoded. Features that may improve performance in one code may have detrimental effects in others, and results were unpredictable.

In arguing that the instituted claims are unpatentable, Petitioner relies on a combination of two prior art references: the Divsalar reference, which describes a method of encoding using repeat accumulate (RA) codes, and the Luby reference, which describes a set of codewords that are based on application of irregular bipartite graphs to Gallager's LDPC codes. Neither reference discloses the limitation of irregularly repeating information bits, which is required by all of the '710 claims, and a person of ordinary skill in the art would not have been motivated by Luby to incorporate irregular repetition into Divsalar.

The petition fails to describe how or why a person of ordinary skill in the art would have been motivated by Luby, which describes *graphs* in which the degree of the *codeword* is irregular, to make the repetition of the information bits in the encoding described in Divsalar irregular. Luby does not even describe an encoding process, and thus does not describe information bits. Petitioner does not point to

# Explore Litigation Insights

Docket Alarm provides insights to develop a more informed litigation strategy and the peace of mind of knowing you're on top of things.

## Real-Time Litigation Alerts

Keep your litigation team up-to-date with **real-time alerts** and advanced team management tools built for the enterprise, all while greatly reducing PACER spend.

Our comprehensive service means we can handle Federal, State, and Administrative courts across the country.

## Advanced Docket Research

With over 230 million records, Docket Alarm's cloud-native docket research platform finds what other services can't. Coverage includes Federal, State, plus PTAB, TTAB, ITC and NLRB decisions, all in one place.

Identify arguments that have been successful in the past with full text, pinpoint searching. Link to case law cited within any court document via Fastcase.

## Analytics At Your Fingertips

Learn what happened the last time a particular judge, opposing counsel or company faced cases similar to yours.

Advanced out-of-the-box PTAB and TTAB analytics are always at your fingertips.

## API

Docket Alarm offers a powerful API (application programming interface) to developers that want to integrate case filings into their apps.

## LAW FIRMS

Build custom dashboards for your attorneys and clients with live data direct from the court.

Automate many repetitive legal tasks like conflict checks, document management, and marketing.

## FINANCIAL INSTITUTIONS

Litigation and bankruptcy checks for companies and debtors.

## E-DISCOVERY AND LEGAL VENDORS

Sync your system to PACER to automate legal marketing.
