[57] **ABSTRACT**

A method of designing a reactor **10**. The present reactor design method includes steps of providing a first plasma etching apparatus **10** having a substrate **21** therein. The substrate includes a top surface and a film overlying the top surface, and the film having a top film surface. The present reactor design method also includes chemical etching the top film surface to define a profile **27** on the film, and defining etch rate data from the profile region. A step of extracting a reaction rate constant from the etch rate data, and a step of using the reaction rate constant in designing a second plasma etching apparatus is also included.
